23736 (DOE/NBM—7004372) Annual review of US progress in rock mechanics: Rock dynamics. (National Committee for Rock Mechanics, Washington, DC (USA). Panel on Science and Engineering of Rock Mechanics). 1986. 41p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87004372.

Topics relating to transient, high speed, and seismic processes in rock masses are covered. The topics covered include rock excavation by mechanical cutters, boring machines, water jets, and drilling. Rock blasting is discussed with special attention paid to

comminution, fragmentation, reservoir stimulation, ground vibration, and containment of underground explosions. Cratering is also covered. Rock dynamics is discussed with areas of interest including friction studies, earthquake and blast studies, as well as dynamic modeling. Seismic methods are applied to test-bam treaty verification, borehole fracture detection, hydrofracture orientation, and acoustic emission testing. (JDH)

23737 **(DOE/NBM—7007652) A study of ultrasonic surface and bulk waves in saturated porous solids: Technical report No. 11.** Mayes, M. (Lawrence Livermore National Lab., CA (USA); Ohio State Univ., Columbus (USA). Dept. of Welding Engineering). Apr 1986. Contract W-7405-ENG-48. 76p. NTIS MF A01; 2; GPO Dep. File Number DE87007652.

The acoustics of fluid-saturated porous solids were studied. These structures are characterized by the fluid pores and the solid matrix as being each continuous. The structure is typical of many sedimentary rocks and synthetic filtration materials. The thesis contains experimental measurements of bulk waves in "Biot solids," especially the slow wave. Plona's measurements are repeated and slow wave properties and detection difficulties are discussed. A "wedge" technique developed in our laboratory to enhance slow wave detection is also presented. Experimental results of surface wave velocity measurements are presented, using the periodic surface technique, as are experiments performed on various rock samples in an attempt to measure bulk and surface waves in natural materials.

23738 **(SAND—84-2621) Nevada Nuclear Waste Storage Investigations Project: G-Tunnel small-diameter heater experiments: Final report.** Zimmerman, R.M.; Blanford, M.L.; Holland, J.F.; Schuch, R.L.; Barrett, W.H. (Sandia National Labs., Albuquerque, NM (USA). Nevada Nuclear Waste Storage Investigations Projects Dept.). Dec 1986. Contract AC04-76DP00789. 235p. NTIS, PC A11/MF A01; 1; GPO Dep. File Number DE87007361.

Designers and analysts of radioactive waste repositories must be able to predict thermal and hydrothermal behavior of tuffs. Therefore, Sandia National Laboratories elected to conduct three experiments in both welded and nonwelded tuffs, using a single small-diameter (10.2-cm) heater for all three experiments. For two experiments, the heater was oriented vertically in fractured welded tuff and in unfractured nonwelded tuff; horizontal heater orientation was used in fractured welded tuff. The major focus of the experiments was on evaluation of numerical model applications, emphasizing thermal properties; the secondary focus was on hydrothermal measurements and evaluations.

23739 **Nd, O and Sr isotopic constraints on the origin of Precambrian rocks, southern Black Hills, South Dakota.** Walker, R.J.; Hanson, G.N.; Papike, J.J.; O'Neil, J.R. (State Univ. of New York, Stony Brook). *Geochimica et Cosmochimica Acta;* **50**: No. 12, 2833-2846(Dec 1986). Contract AC02-79ER10412;AS03-82ER12040;FG01-84ER13259.

The Nd, O and Sr isotopic characteristics of Precambrian metasedimentary, metavolcanic and granitic rocks from the Black Hills of South Dakota are examined. Two late-Archean granites (2.5-2.6 Ga) have T/sub DM/ ages of 3.05 and 3.30 Ga, suggesting that at least one of the granites was derived through the melting of significantly older crust. Early-Proterozoic metasedimentary rocks have T/sub DM/ ages that range from 2.32 to 2.45 Ga. These model ages, in conjunction with probable stratigraphic ages ranging from 1.9 to 2.2 Ga, indicate that mantle-derived material was added to the continental crust of this region during the early-Proterozoic. Previous studies of the Harney Peak Granite complex have reported U-Pb and Rb-Sr ages of about 1.71 Ga, and most granite samples examined in this study have Sr isotopic compositions consistent with that age. Two granite samples taken from the same sill, however, give two-point Rb-Sr and Sm-Nd ages of 2.08 +/- 0.08 and 2.20 +/- 0.20 Ga, respectively. In addition, whole-rock and apatite samples of the spatially associated Tin Mountain pegmatite give a Sm-Nd isochron age of 2000 +/- 100 Ma.

23740 **(IC—86/309) Anomalous short period geomagnetic variations at two stations in Sri Lanka.** Kunaratnam, K. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701561.

An analysis of the rates of change in the geomagnetic field components in the period range 20-600 sec recorded at Kondavil and Hikkaduwa, two stations in the equatorial electrojet belt near the northern and south western coasts respectively of Sri Lanka, shows anomalous variations. The results confirm induced current concentration in the Palk Strait and deflection of induced currents around the southerncoast of Sri Lanka postulated by earlier workers from observations of SSC and Bay events at Indian stations and from analogue and numerical model studies. At Kondavil, which is situated close to the geomagnetic equator, no appreciable difference in the night-time and day-time values of $\Delta Z/\Delta H$ and $\Delta D/\Delta H$ ratios was noticed while at Hikkaduwa, a station situated under the edge of the equatorial electrojet belt, a day-time enhancement of $\Delta Z/\Delta H$ ratios was found at all periods in the observed range. An enhancement of the H component at Colombo over that at Hikkaduwa was also found at short periods, the enhancement being greater at daytime. The day-time enhancement in the $\Delta Z/\Delta H$ ratios at Hikkaduwa and in the ratio of the H components at Colombo and Hikkaduwa could be due to the effect of the equatorial electrojet on the short period variations. 11 refs, 8 figs.

5805 Oceanography

REFER ALSO TO CITATION(S) 22313

23741 **(DOE/ER/60450—1) Coordination: Southeast continental shelf studies: A progress report.** Menzel, D.W. (Skidaway Inst. of Oceanography, Savannah, GA (USA)). 15 Jan 1987. Contract FG09-86ER60450. 27p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006731.

Two major experiments, GABEX and SPREX, were conducted in past years: (1) to define processes controlling and associated with upwelling at the shelf break (GABEX); (2) to describe exchanges of shelf with offshore waters during the spring metorological regime (SPREX). Field work associated with the SPREX experiment was concluded in 1985. A major effort was expended during 86-87 to reduce and synthesize the data obtained in 1984 and 1985. Considerable effort was expended during the current fiscal year to redesign and modify some aspects of previously submitted "5 year plans." These modifications are sensitive on the results of recent research involving: (1) the development of a model to explain nearshore circulation and those resulting from (2) analyses of satellite imagery; and (3) tests designed to determine if tritium can be used as a unique tracer of fresh water discharged from the Savannah River.

23742 **(DOE/MC/20037—2265) Statistical description of the summertime ice edge in the Chukchi Sea: Final report, Task 2.** Stringer, W.J.; Groves, J.E. (Alaska Univ., Fairbanks (USA). Geophysical Inst.). Jan 1987. Contract AC21-83MC20037. 217p. NTIS, PC A10/MF A01; 1; GPO Dep. File Number DE87001056.

Ice edge data has been analyzed for ice recursion analysis in the Chukchi Sea for a twelve year period. Conclusions drawn include: (1) numerous parameter comparisons describing the great variability of ice extent found in the Chukchi Sea; (2) that for a period of 80 to 100 days beginning with August and continuing through October, ice-free water will exist in the Chukchi Sea south of 70°N and 175°W. Within these boundaries ice will return (recur) once after it has retreated in the spring, or it will retreat once after it has returned in the fall, less than 50% of the time; (3) ice in the western Chukchi Sea (along the Siberian coast) may provide multi-year ice to the Bering Sea through Bering Strait starting in late fall; (4) melt-back bays (defined by Paquette and Bourke, 1981) created by warm Bering Sea waters channeled by Chukchi Sea bathymetry

are persistent and significant features of the Chukchi Sea ice edge. 11 refs., 212 figs., 3 tabs.

6401 Astrophysics And Cosmology

REFER ALSO TO CITATION(S) 23946, 24343

23744 **(AD-A—175931/5/XAB) Distribution of flares on the sun: super-active regions and active zones of 1980-1985.** Bai, T. (Stanford Univ., CA (USA). Center for Space Science and Astrophysics). May 1986. 39p. (CSSA-ASTRO—86-31). NTIS, PC A03/MF A01.

Coordinates of energetic solar flares observed with the Hard X-Ray Burst Spectrometer during the period have shown important discoveries resulting from this analysis are as follows: (1) A small number (28) of superactive regions produced the majority of the major flares during this period. These super-active regions are large, complex active regions containing large sunspots. (2) There exist active zones, in which the flare occurrence rate is much higher. Two active zones are in the northern hemisphere, and two in the southern hemisphere. The longitudinal separation of the two active zones in the same hemisphere is about 180°, but the active zones of the southern hemisphere are misaligned from those of the northern hemisphere by about 80°. The rotation period of the active zones is 26.75 days. Active zones last several years or longer. (3) There is a hint of active center rotating at a period of 23.7 days. It is possible that active centers in deep layer rotate with such a period.

23745 (EUR—9708-Vol.2, pp 997-1017) **Solar physics. Progress in solar hydromagnetics.** Kuperus, M. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The present state of the theory of the magnetic solar cycle is reviewed and recent developments of the theory of coronal heating in terms of magnetic structures that are electrodynamically coupled to the photospheric velocity spectrum are presented. Explosive energy release in solar flares is discussed on the basis of a chain of plasma instabilities. The review concentrates on the magnetohydrodynamic aspects of the above mentioned topics and only briefly touches the microscopic aspect when necessary.

23746 (EUR—9708-Vol.2, pp 1019-1038) **Collisionless shock waves in space.** Scholer, M. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Various types of collisionless shock waves occurring in the heliosphere are interplanetary travelling shocks, shock pairs bounding corotating interaction regions, planetary bow shocks, and the heliospheric terminating shock. The earth's bow shock is the most detailed studied collisionless shock. Recent spacecraft observations at the bow shock pertaining to the structure of collisionless shocks are reviewed. In particular the dual ISEE 1 and 2 spacecraft mission allowed for the first time an exact determination of the different length scales in the shock transition region. Also determination of wave rest frame frequencies and polarisations (and thus of the wave modes) was only possible by using data from two closely spaced satellites. The viscosity at the quasi-perpendicular shock is provided by the reflected and gyrating ions. The thermalisation of the electrons is probably due to instabilities driven by the free energy in a field-aligned electron beam. This electron beam is due to the macroscopic electric field along the macroscopic magnetic field and is directed into the downstream medium.

23747 (EUR—9708-Vol.2, pp 1039-1042) **Slide-away regime in space and laboratory plasmas.** Coppi, B. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

23748 (EUR—9708-Vol.2, pp 1043-1066) **Plasma instabilities in the magnetosphere of pulsars.** Lominadze, J.G.; Melikidze, G.I.; Pataraya, A.D. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

This paper discusses some new results in the theory of the magnetosphere of pulsars and relativistic electron-positron plasmas. Certain plasma processes which may be used to interpret emission from pulsars are explained. The formation of an envelope soliton which has a non-zero charge density is also considered. The power and spectral density of the soliton which is moving along the curved magnetic field lines are calculated.

23749 (EUR—9708-Vol.2, pp 1067-1077) **Cosmic ray acceleration by collisionless shocks.** Axford, W.I. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Current ideas concerning the nature and origin of energetic particles (cosmic rays) in the galaxy are briefly reviewed. Many of the problems that have arisen are essentially plasma physical, involving the scattering of the particles by hydromagnetic waves in the background plasma, the damping of these waves and the injection of low energy plasma particles into the acceleration process. Non-linear effects are especially important, notably the dynamical effects of cosmic ray and wave pressure gradients on the bulk plasma flow, non-linear wave damping and plasma heating.

23750 (EUR—9708-Vol.2, pp 1077-1084) **Theory of galactic disks and its relevance to the solar wind magnetic configuration.** Bertin, G.; Coppi, B. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Large scale features of galactic disks, particularly spiral structure, have been successfully studied in terms of global galactic plasma modes that are excited from an axisymmetric disk configuration. In analogy with the case of gravitational plasmas, we consider the modes of oscillation for axisymmetric current disks. We suggest

that the magnetic sectors in the solar wind be explained as the result of large scale bending waves of the current disk that characterizes the solar wind magnetic configuration.

23751 **(IC—86/47) Global solar radiation in Trieste, Italy.** Anane-Fenin, K. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701403.

Global irradiation data recorded at Trieste (CNR - Istituto Talassografico di Trieste) during 11-year period are grouped into "summer" and "winter" periods and are compared with values generated from seven different models and empirical correlations proposed by earlier investigations. Climatological parameters like sunshine duration, relative humidity, cloud cover and maximum air temperature are the models input. The calculated values obtained from correlations according to Angstrom and Black give better agreement with measured data in summer. Agreements are within +-3% and +-4%. In winter a quadratic equation is in better agreement with measured values. Agreement is within +7%. 14 refs, 7 figs, 4 tabs.

23752 **(IC—86/69) On the stochastic approach to inflation and the initial conditions in the universe.** Pollock, M.D. (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701406.

By applying stochastic methods to a theory in which a potential V(PHI) causes a period of quasi-expansion of the universe, Starobinsky has derived an expression for the probability distribution P(V) appropriate to chaotic inflation in the classical approximation. We obtain the corresponding expression for a broken-symmetry theory of gravity. For the Coleman-Weinberg potential, it appears most probable that the initial value of PHI is PHI/sub i/ <<PHI/sub O/, in which case inflation occurs naturally, because V(PHI/sub i/)>O. 43 refs.

23753 **(IC—86/74) Eternal chaotic inflation.** Linde, A.D. (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701407.

It is shown that the universe evolution in the chaotic inflation scenario has no end and may have no beginning. According to this scenario, the universe consists of exponentially large number of different mini-universes inside which all possible metastable vacuum states and all possible types of compactification are realized. 17 refs.

23754 **(IC—86/75) Eternally existing self-reproducing inflationary universe.** Linde, A.D. (International Centre for Theoretical Physics, Trieste (Italy)). May 1986. 29p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701408.

It is shown that the large-scale quantum fluctuations of the scalar field phi generated in the chaotic inflation scenario lead to an infinite process of self-reproduction of inflationary mini-universes. A model of eternally existing chaotic inflationary universe is suggested. It is pointed out that whereas the universe locally is very homogeneous as a result of inflation, which occurs at the classical level, the global structure of the universe is determined by quantum effects and is highly non-trivial. The universe consists of exponentially large number of different mini-universes, inside which all possible (metastable) vacuum states and all possible types of compactification are realized. The picture differs crucially from the standard picture of a one-domain universe in a "true" vacuum state. Our results may serve as a justification of the anthropic principle in the inflationary cosmology. These results may have important implications for the elementary particle theory as well. Namely, since all possible types of mini-universes, in which inflation may occur, should exist in our universe, there is no need to insist (as it is usually done) that in realistic theories the vacuum state of our type should be the only possible one or the best one. 43 refs, 3 figs.

23755 **(IC—86/148) On the thermal properties of neutron matter with spin up excess.** Ramadan, S. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701405.

The schematic model of pure hard core neutron matter proposed by Dabrowski et al. is generalized to finite temperature, where the attractive part of nuclear forces is treated as a perturbation. We calculate the potential energy, the energy per neutron, the volume and symmetry pressure, the magnetic susceptibility, the effective mass and the velocity of sound as a function of temperature. Our results are compared with previous calculations. 28 refs, 8 figs.

23756 **(IC—86/181) History of the universe in a superstring model.** Maeda, K. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701530.

A superstring theory, which is most promising candidate for a unified theory, predicts a higher-dimensional 'space-time'. Its application to cosmology, especially reconsideration of the early history of the universe, is definitely important and interesting. Here, we discuss some scenario of the universe in a superstring model. Main problems in higher-dimensional unified theories, from the cosmological point of view, are: (I) Can the 4-dim Einstein gravity be obtained, rather than the Jordan-Brans-Dicke theory? (II) Can the 4-dim Friedmann universe (F/sup 4/) be realized naturally in the higher-dimensional space-time? (III) Does inflation really occur? The answers for (I) and (II) are 'yes' in a superstring model, as we will see soon. (III) is still an open question, although it seems to be difficult. Taking into account a quantum tunnelling effect of the anti-symmetric tensor field H/sub $\mu\nu\rho$/, we also show that a hierarchical bubble structure might be formed due to a series of phase transitions. 14 refs, 3 figs.

23757 **(IC—86/291) Possible inflationary solution to the short distance gravity model.** Akdeniz, K.G.; Hacinliyan, A.; Kalayci, J. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701559.

We find a solution involving a time dependent cosmological constant to the short distance gravity model which may be interpreted as inflationary. 7 refs.

23758 (INIS-mf—10589, pp 106-107) **Monte Carlo calculation of cosmogenic nuclide production.** Emrich, P.; Povinec, P.; Tokar, S. (Komenskeho Univ., Bratislava, Czechoslovakia. Matematicko-Fyzikalna Fakulta). 1985. (In Slovak). NTIS (US Sales Only), PC A07/MF A01. File Number DE87701626. (CONF-8508223—Pt.1-Vol.1).

23761 (INIS-SU—378, pp 61-65) **On nature of high energy muon narrow groups.** Vavilov, Yu.N.; Dedenko, L.G. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780101.

Kratkie Soobshcheniya po Fizike.; No. 2.

In Experimental and theoretical physics. Collection.

By the Monte Carlo method a series of characteristics of muon narraw gpoups arising due to nuclear cascade fluctuations is

calculated. The Coulomb muon scattering account in the ground deforms the groups into wider ones. The radius of the circle inside which the group finds grows from 0.5 to1-1.5 m. The following conclusion is drawn: either the energy muon spectrum in registered in the course of the experiment multiparticle narrow groups is higher energy than the spectrum calculated in accepted assumptions on specific features of strong interactions and the mechanism of generation of high-energy muons in nuclear cascade or the muon beams observed at the Calar Gold Fields facility are bound with interactions and decays of a new heavy strongly penetrating particle.

23762 **(KFKI—1986-34/C) Comet Halley: nucleus and jets. Results of the VEGA mission.** Sagdeev, R.Z.; Avanesov, G.A.; Barinov, I.V. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Jun 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701404.

The VEGA-1 and VEGA-2 spacecrafts made their closest approach to Comet Halley on 6 and 9 March, respectively. In this paper results of the onboard imaging experiment are discussed. The nucleus of the comet was clearly identifyable as an irregularly shaped object with overall dimensions of (16 +- 1)x(8 +- 1)x(8 +- 1) km. The nucleus rotates around its axis which is nearly perpendicular to the orbital plane, with a period of 53 +- 2 hours. Its albedo is only 0.04 +- 002. Most of the jet features observed during the second fly-by were spatially reconstructed. These sources form a quasi-linear structure on the surface. The dust above the surface is shown to be optically thin except certain specific dust jets. Brightness features on the surface are clearly seen. Correlating the data with other measurements it is concluded that the dirty snow-ball model probably has to be revised. 15 refs.; 10 figs.

23763 (N—87-15043, pp vp) **Far-infrared investigation of the Taurus star-forming region using the IRAS database.** Hughes, J.D. Oct 1986. NTIS, PC A10/MF A01. (NASA-TM—88342; A—86393; NAS—1.15:88342; CONF-8607112—Absts.).

From Interstellar processes conference; Jackson, WY, USA (3 Jul 1986).

The Taurus-Auriga complex was selected as the first molecular cloud to be investigated in this study. The Taurus clouds were defined as lying between 04h and 05h in R.A. and +16 to +31 degrees in Dec., then the IRAS point-source catalogue was searched for sources with good or moderate quality fluxes in all three of the shortest IRAS bands. The sources selected were then classified into subgroups according to their IRAS colors. Taurus is generally believed to be an area of low-mass star formation, having no luminous O-B associations within or near to the cloud complex. Once field stars, galaxies and planetary nebulae had been removed from the sample only the molecular cloud cores, T Tauri stars and a few emission-line A and B stars remained. The great majority of these objects are pre-main sequence in nature and, as stated by Chester (1985), main sequence stars without excess far-infrared emission would only be seen in Taurus if their spectral types were earlier than about A5 and then not 25 microns. By choosing our sample in this way we are naturally selecting the hotter and thus more evolved sources. To counteract this, the molecular cloud core-criterion was applied to soruces with good or moderate quality flux at 25, 60 and 100 microns, increasing the core sample by about one third. The candidate protostar B335 is only detected by IRAS at 60 and 100 microns while Taurus is heavily contaminated by cirrus at 100 microns. This means that detection at 25 microns is also required with those at 60 and 100 microns to avoid confusing a ridge of cirrus with a genuine protostar. The far-infrared luminosity function of these sources is then calculated and converted to the visual band by a standard method to compare with the field star luminosity function of Miller and Scalo.

23764 **(PB—87-137766/XAB) Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data.** Coffey, H.E. (National Geophysical Data Center, Boulder, CO (USA)). Nov 1986. 123p. (SGD—507-PT-1). NTIS, PC A06/MF A01.

Contents include: Detailed index for 1986; Data for May 1986--(Meudon carte synoptique, Solar flares, Solar radio bursts at fixed frequencies, Solar x-ray radiation from GOES satellite, Mass ejection from the sun, Active prominences and filaments); Miscellaneous data--(International geophysical calendar 1987).

23766 **(PB—87-138095/XAB) White light solar corona: an atlas of 1985 K- coronameter synoptic charts, December 1984-December 1985. Technical note.** Sime, D.G.; Garcia, C.; Yasukawa, E.; Lundin, E.; Rock, K. (National Center for Atmospheric Research, Boulder, CO (USA)). Oct 1986. 73p. (NCAR/TN—274-STR). NTIS, PC A04/MF A01.

The synoptic observing program of the Mauna Loa Solar Observatory (MLSO) has as its goal the specification of the time-dependent structure of the solar corona. The growth of the low intensity polar regions and ordering of the brighter corona into a band near the equator seen in the second, third, and fourth years of observations (1981-1983) continued through 1984. In 1985, the corona remains in the same general form, with the brightest regions concentrated in a band around the equator, similar to the situation noted near the last solar minimum. The apparent excursions of the darkest regions (polar holes) towards the equator seen at the start of the year become less pronounced with time. However, the area embraced by the highest brightness contours tends to increase throughout the year, perhaps indicating that the corona has gone through its minimum configuration. The material presented here is in a format providing a convenient access to investigators intending to make correlation studies or an intercomparison of standard synoptic data sets.

Some thoughts are given to the antropic principle and its traces in physics.

23768 **(UWThPh—1986-46) Black holes with supercharge.** Aichelburg, P.C. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701611.

A review is given of what is known about stationary black hole configurations with non-zero supercharge in N=1 and N=2 supergravity.

23769 **Cosmological baryon production in spontaneous-CP-violating models without strong CP problem.** Cheng, H. (Physics Department, Indiana University, Bloomington, Indiana 47405). *Physical Review* [*Section*] *D: Particles and Fields;* **34**: No. 12, 3824-3830(15 Dec 1986).

We study the cosmological baryon production in two different classes of spontaneous-CP-violating models with no strong CP problem. All known realistic models predict a large ΔB in the range required by the observed baryon asymmetry. In the first class of models in which CP violation is transmitted from the grand-unification scale down to the low-energy sector through fermion mixing effects, baryon asymmetry arises from the nonunitarity of the transformation matrices. It is pointed out that there is no dangerous flavor-changing neutral current due to Z-boson exchanges in the Nelson-type models. Weak CP-odd interactions are mediated by colored scalars in the second class of models. Large matter-antimat-

ter asymmetry can result from the decays of superheavy leptoquark scalars or from the decays of color-triplet Higgs bosons into a superheavy and light fermion.

23770 **Probing the structure of the universe from quarks to cosmology.** Kolb, E.W.; Quigg, C. (NASA/Fermilab Theoretical Astrophysics Group, Fermi National Accelerator Laboratory, Batavia, Illinois). *Physics Teacher;* **24**: No. 9, 528-539(Dec 1986).

The study of fundamental physical systems in the laboratory has implications for the evolution of our Universe as a whole. The next step toward an ultimate understanding of the Universe requires a powerful new instrument for the study of the physics of elementary particles: the Supercoducting Supercollider.

23771 **Globular clusters.** King, I.R. (Univ. of California, Berkeley). *Scientific American;* **252**: No. 6, 78-88(Jun 1985).

Throughout the 20th century, moreover, the study of globular clusters has led to fundamental advances in many branches of astronomy. In part because the clusters are so luminous their spatial distribution has helped investigators to stake out the frontiers of the Milky Way and of other galaxies; it has even been suggested that the clouds of gas that engendered globular clusters were the building blocks from which galaxies were made. Furthermore, all stars in a given cluster can be assumed to be the same age, and so the types of stars in clusters offer general insight into how stars evolve and why they differ in color and brightness. Finally, globular clusters bear on the evolution of the universe itself. They are the oldest objects known, dating perhaps from just after the big bang; as a result their ages impose severe observational constraints on cosmological models, and their chemical composition is evidence of the composition of galaxies at the earliest stage of development. 7 figures.

23772 **Collective capture of released lithium ions in the solar wind.** Winske, D.; Wu, C.S.; Li, Y.Y.; Zhou, G.C. (Los Alamos National Lab., NM). *Journal of Geophysical Research;* **89**: No. A9, 7327-7330(1 Sep 1984).

The capture of newly ionized lithium ions in the solar wind by means of electromagnetic instabilities is investigated through linear analysis and computer simulation. Three instabilities, driven by a lithium velocity ring perpendicular to and drifting along the magnetic field, are considered. The capture time of the lithium by the solar wind is roughly 10 linear growth times, regardless of whether resonant or nonresonant modes dominate initially. Possible implications of the results for the Active Magnetosphere Particle Tracer Explorer (AMPTE) mission are discussed. 18 references, 3 figures.

23773 **Cosmology, inflation, and supersymmetry.** Albrecht, A.; Fischler, W.; Steinhardt, P.J.; Dimopoulos, S.; Kolb, E.W.; Raby, S. (Pennsylvania Univ., Philadelphia; Harvard Univ., Cambridge, MA; Los Alamos National Lab., NM). pp 511-525 of Proceedings of the third Marcel Grossmann meeting on general relativity. Part A. Hu Ning (ed.). Amsterdam, Netherlands; North-Holland (1983). (CONF-820882—).

From 3. Marcel Grossman meeting on the recent developments of general relativity; Shanghai, China (28 Aug 1982).

Cosmological consequences of supersymmetric grand unified models based on the Witten-O'Raifeartaigh potential are discussed. In particular the authors study the development of the phase transition in the spontaneous breaking of supersymmetry. They find that in realistic models where light fields feel supersymmetry breaking only through coupling to massive fields, e.g., the Geometric Hierarchy model, the transition does not produce sufficient entropy. Thus, the standard cosmological flatness, monopole, and horizon problems remain. In addition, it is found that the transition is never completed, in the sense that the universe remains dominated by coherent Higgs field energy, resulting in an apparent matter dominated universe with $\Omega > \text{or} - 10^{30}$. (Auth.).

23774 **History of x-ray transients as seen by Vela, 1969-1979.** Terrell, J.; Priedhorsky, W.C.; Belian, R.D.; Conner, J.P.; Evans, W.D. (Los Alamos National Lab., NM). *Annals of the New York Academy of Sciences;* **422**: 282-283([1987]).

During the 10-year lifetime of the x-ray detectors, the Vela spacecraft provided data on many new types of sources. Cen X-4, an exceedingly bright x-ray transient, was observed in the summer of 1969, shortly after launch, and did not return to the x-ray sky until May 1979, when it was again observed by Vela 5B. This source also produced the first of many x-ray bursts detected by Vela, the bright, hard, precursor observed on 7 July 1969. The vela gamma-ray detectors revealed the new phenomenon of gamma-ray bursts. It has recently been found that at least two gamma-ray bursts were also detected by the x-ray counters. The data produced by Vela 5B over the 7-year period May 1969 - June 1976, during which real-time tracking was reasonably complete, have been put into the form of a series of 10-day x-ray sky maps. Although the Vela x-ray detectors were relatively small (27 cm^2 effective area), they were sensitive enough to yield good data on Cen A (NCC 5128) during the period 1973-1975 when it was unusually bright and active. The Vela data show that Cen A often changed dramatically in intensity in less than 10 days. 11 references.

23775 **(AD-A—175695/6/XAB) Ionospheric plasma study. Final report, 28 February 1983-28 February 1986.** Chang, T. (Massachusetts Inst. of Tech., Cambridge (USA)). 15 Sep 1986. 192p. NTIS, PC A09/MF A01.

This report concerns plasma instabilities, ionospheric turbulence, and particle-energization processes in the magnetosphere and ionosphere. The following are examples for which theoretical explanations have been obtain: ion conics, effects of magnetic shear on the beam-induced instability, pitch-angle diffusion, wave-particle interactions, nonclassical polar wind, and strong plasma turbulence. Specific topics include: 1. Ion acceleration by lower-hybrid waves in the topside ionosphere. 2. Transverse acceleration of oxygen ions in the central plasma sheet region by electromagnetic ion-cyclotron resonance with broad-band left-hand polarized waves. 3. Analytic description of ion conics in the inhomogeneous terrestrial magnetic field. 4. Effect of magnetic shear on the nonlocal stability of beam-induced lower-hybrid waves. 5. The loss cone population of charged particles in the magnetosphere. 6. Charged particle injection experiments in space. 7. Critical fluctuations around non-equilibrium states and strong turbulence. 8. Heat-flux distribution and associated instabilities in the polar wind and solar wind.

23776 **(AD-A—175730/1/XAB) Modeling substorm current sytems using conductivity distributions inferred from DE (Dynamics Explorer) auroral images.** Kamide, Y.; Craven, J.D.; Frank, L.A.; Ahn, B.H.; Akasofu, S.I. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). 1 Oct 1986. 24p. NTIS, PC A02/MF A01.

Published in J. of Geophysical Research, Vol. 91, No. A10, 11235-11256(1 Oct 1986).

Images of auroral emissions observed with Dynamics Explorer 1 (DE 1) are used to calculate ionospheric conductivities over the polar region. The combination of ground-based magnetometer data and the inferred conductivities estimate, on a global scale, the distributions of ionosphere electric fields and currents and field-aligned currents, as well as the Joule-heating production rate, with a time resolution of 12 min. Although the inference of the conductivity distribution requires further improvements, the following conclusions may be drawn from this work: (1) The westward electrojet is in general collocated with the region of high auroral luminosity while the region of relatively low luminosity in the evening sector is collocated with the eastward electrojet. (2) The upward field-aligned currents exist in the brightest auroral region on the poleward side of the evening auroral oval and on the equatorward side of the morning oval. However, the magnitudes of these upward currents are not in proportion to the auroral luminosities, suggesting that the characteristic energies of precipitating electrons carrying the upward currents and generating the auroral luminosities may be different. (3) A significant amount of ionospheric currents can flow in regions where there are no bright auroral emissions. An example of this effect is found over the poleward half of the westward electrojet in the morning sector

where the electric field is the main contributor to the ionospheric currents. (4) The distribution of calculated field-aligned currents displays many localized structures that characterize the development of the substorm current system.

23777 **(AD-A—175734/3/XAB) Global auroral responses to magnetospheric compressions by shocks in the solar wind: two case studies.** Craven, J.D.; Frank, L.A.; Russell, C.T.; Smith, E.J.; Lepping, R.P. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). 1986. 15p. NTIS, PC A02/MF A01.

Published in Geophysical Research Letters, Vol. 13, No. 8, 873-876(1986); Original contains color plates: All DTIC and NTIS reproductions will be in black and white.

Two case studies are presented of the global auroral responses to shocks in the solar wind at Earth. The z component of the interplanetary magnetic field, Bz, is negative ahead and behind the first shock and positive for the second case. A sudden-commencement geomagnetic storm develops in each case, with maximum D/sub st/ < or = 190 nT. An immediate auroral response is detected at all longitudes around the auroral oval, in which auroral luminosities increase by a factor of 2 to 3 with the first samples after each sudden commencement. The time delay in obtaining the first sample varies with local time from approx 1 to 18 minutes. No other significant variations in the aurorae are associated with the immediate response. Beginning about 30 minutes after each sudden commencement, the aurorae become active and display significant variations in luminosity and spatial distribution. For B/sub z/ < 0 an intense substorm develops. A sun-aligned transpolar arc forms when B/sub z/ > 0, appearing first at local midnight as a polar arc and then lengthening sunward from the auroral oval across the polar cap to noon at an average speed of about 1 km/sec.

23778 **(AD-A—175756/6/XAB) Kinetic model of auroral plasma formation II: simultaneous multi-satellite ion observations and interpretations. Technical report.** Chiu, Y.T.; Lennartsson, O.W.; Korth, A.; Kremser, G.; Fennell, J.F. (Aerospace Corp., El Segundo, CA (USA). Space Sciences Lab.). 30 Sep 1986. 52p. (TR—0086(6940-05)-4). NTIS, PC A04/MF A01.

A detailed analysis of ion composition and distribution observed simultaneously by GEOS 2, SCATHA, and ISEE 1 satellites at the initial phases of an injection event in the inner magnetosphere was made. The mean convection electric field observed by GEOS 2 during the data interval was used to determine the space-time variation of a global time-dependent convection electric-field model, which is approximately verified in this report by ISEE 1 plasma flow measurements and by the unusual SCATHA observation of low-energy ions convected from the plalsmasphere cloak region. Theoretical tracing of ion trajectories with the tested electric-field model indicates that multi-satellite observations of keV ion dispersion can be interpreted in terms of a collision/mixing between an injected auroral ion population rich in oxygen with a preinjection population rich in hydrogen and doubly-ionized helium which had previously moved inward from ISEE 1 orbit. The results of this collision/mixing was that ion dispersion signatures afterwards appeared as if they were from a single population, having lost memory of their previous convection history. This is a possible formulation mechanism of the ad hoc injection boundary which is marked only by plasma dispersion signature and not by any other magnetospheric feature.

23779 **(AD-A—175799/6/XAB) Velocity distributions of ion beams in the plasma-sheet boundary layer. Progress report.** Eastman, T.E.; DeCoster, R.J.; Frank, L.A. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). 1986. 12p. NTIS, PC A02/MF A01.

Published in Geophysical Monograph, Ion Acceleration in the Magnetosphere and Ionosphere, No. 38, 117-126(1986).

Field-aligned ion beams commonly occur in the plasma-sheet boundary layer. With sufficient energy and angular resolution, plasma measurements of ion-beam velocity distributions there can be used as a diagnostic tool to evaluate ion-acceleration processes. Model fits to data are shown for adiabatic deformation of a flowing Maxwellian, acceleration due to field-aligned potentials, and current-sheet acceleration. Isodensity contours of the velocity distributions typically show a closer spacing within the low-energy portion of the ion beams that is not consistent with adiabetic deformation alone acting upon an initially isotropic distribution function. Detailed comparisons of acceleration models with the overall shapes of the observed beam distributions indicate that the ion beams were subjected to some potential drop that may be field-aligned or perhaps cross tail as for the current-sheet acceleration process. Measurements of velocity-dispersion effects have also proven to be a useful diagnostic tool although propagation effects are difficult to separate from signatures of the initial acceleration process. Ion-acceleration processes in the magnetotail are primarily associated with the plasma-sheet boundary layer.

23780 **(AD-A—175914/1/XAB) Characteristics of polar-cap precipitation and their dependence on the interplanetary magnetic field and the solar wind.** Hardy, D.A.; Gussenhoven, M.S.; Riehl, K.; Burkhardt, R.; Heinemann, N. (Air Force Geophysics Lab., Hanscom AFB, MA (USA)). 1986. 31p. (AFGL-TR—87-0002). NTIS, PC A03/MF A01.

Published in Solar Wind-Magnetosphere Coupling, 575-604(1986).

Work completed on the nature of the precipitation occuring in the polar cap and its relationship to the state of the solar wind and the interplanetary magnetic field is reviewed. This work has shown that there are two states of polar-cap precipitation; an active state occurring when the IMF B/sub z/ component is positive in which polar showers or polar squalls occur over much of the cap and a quiet state occurring when the IMF B/sub z/ is negative in which only the unperturbed polar rain is observed. The two states occur with approximately equal frequency. The characteristics of both the precipitating electrons and ions for the two states and the variation in these characteristics with the orientation of the IMF and the state of the solar-wind plasma are discussed along with the implications of these observations as to the mechanisms leading to these two states.

23781 **(AD-A—175915/8/XAB) Dynamics of the equatorward boundary of the auroral oval.** Nakai, H.; Kamide, Y.; Hardy, D.A.; Gussenhoven, M.S. (Air Force Geophysics Lab., Hanscom AFB, MA (USA)). 1986. 11p. (AFGL-TR—87-0001). NTIS, PC A02/MF A01.

Published in Solar Wind-Magnetosphere Coupling, 633-641(1986).

The Auroral Boundary Index determined on the basis of DMSP precipitating-electron data is used to examine the expansion and contraction of the auroral oval in the midnight sector. The time scales of the expansion and the contraction of the auroral oval are found to be about 45 minutes and 8 hours, respectively. An empirical formula including these two time scales to predict the oval location from variations in the interplanetary magnetic field (IMF) is devised. The correlation coefficient between the measured and the predicted boundary is 0.82.

23782 **(AD-A—175975/2/XAB) Spectral characteristics of interchange turbulence in the ionosphere. Memorandum report.** Hassam, A.B.; Hall, W.; Huba, J.D.; Keskinen, M.J. (Science Applications International Corp., McLean, VA (USA)). 22 Oct 1986. 55p. NTIS, PC A04/MF A01.

The spectral characteristics of turbulence associated with the magnetized-plasma Rayleigh-Taylor instability in the presence of a background neutral gas are studied. Particular attention is paid to comparing the spectra obtained in the ion-neutral collision-dominated case with the spectra from the ion inertia-dominated case. A saturated level of turbulence is obtained for a model system confined between conducting boundaries with an imposed density gradient between the boundaries. The potential spectrum in the collisional case shows a marked anisotropy in contrast to that in the inertial case which is isotropic and exhibits Kolmogorov scaling. The anisotropy in the collisional case is attributed to the viscous nature of the turbulence and the consequent suppression of inertial overshoots. Application of these results to ionospheric turbulence is discussed.

23783 (AD-A—176009/9/XAB) Limiting energy spectrum of a saturated radiation belt. Technical report. Schulz, M.; Davidson, D.T. (Aerospace Corp., El Segundo, CA (USA). Space Sciences Lab.). 30 Sep 1986. 53p. (TR—0086(6940-06)-6). NTIS, PC A04/MF A01.

A reformulation of the nonrelativistic Kennel-Petschek problem for electrons and protons enables a limiting energy spectrum to be derived, such that (for specified pitch-angle anisotropy s of the energetic-particle population) electromagnetic cyclotron waves at each frequency less than a fraction s/(s+1) of the equatorial gyrofrequency are marginally stable against spontaneous generation. The limiting spectrum is given in closed form for integer values of s and computed numerically for non-integer values of s. Asymptotic expansions for energies E barely above and much greater than the minimum resonant energy E provides estimates of the limiting energy spectrum J_4 pi (E) in these extremes, regardless of whether s is an integer. A reconsideration of the original Kennel-Petschek problem, in which the differential energy spectrum is not calculated but specified as a certain power law (J_4 pi E to the 1-l power), enables the wave frequency corresponding to maximum spatial growth rate, as well as the limiting integral flux I/sub 4p/ above the minimum resonant energy E, to be calculated in closed form as functions of l and s.

Kratkie Soobshcheniya po Fizike.; No. 1.

In Experimental and theoretical physics. Collection.

Elevated albedo of electrons with the energy >= 100 MeV is found in the region of the Brazil magnetic anomaly that serves as a source for capture and quasicapture of electrons of the above energy by the magnetic field of the Earth. Elevated flow of albedo electrons in the region of the Brazil magnetic anomaly should be reflected not only on the intensity of the trapped electron flow in the Earth radiation belt, but on the flow of quasitrapped electrons, longitude dependence of flow intensity. The flow of quasitrapped electrons in this case is maximum to the east of Brazil magnetic anomaly. In its further longitude drift the excess of quasitrapped electron flow formed by large albedo electron flow from the radiation belt protons in the region of the Brazil magnetic anomaly is absorped and intensity of quasitrapped electrons becomes close to intensity of the albedo electron flow out of the region of the Brazil anomaly (50 +- 5) msup(-2)ssup(-1)srsup(-1).

23785 (OUP—86-17) From the sun's corona to the polar cusp aurora above Svalbard. Interplanetary and terrestrial effects of a coronal transient. Sandholt, P.E. (Oslo Univ. (Norway). Fysisk Inst.). Aug 1986. 29p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87750683.

The report presents a study of the flare-related coronal transient of Nov. 27, 1979, with the resulting interplanetary (IP) shock, and the associated auroral and magnetic effects that were observed from the ground 72 hours after the initial coronal brightening. The observed disturbance of the interplanetary magnetic field (IMF) resulting from the coronal mass ejection is discussed in relation to a model discription of flare-related perturbations of the solar current sheet. The power transfer from the solar wind to the magnetosphere did not rise above the treshold value for magnetospheric strom triggering in this case. thus, the IP shock was not followed by a major storm. However, distinct signatures related to the IP disturbance were observed in the polar cusp aurorae above Svaldbard and in the local magnetic field. The dynamical behaviour of the cusp aurora is discussed in relation to different models of plasma transfer across the dayside magnetopause, from the shocked solar wind to the magnetosphere. A detailed analysis of the available information from interplanetary space and the ground indicates that the main auroral dynamics observed in this case are related to localized, impulsive plasma injections associated with flux transfer events. 55 refs.

23786 Injection of an electron beam into a plasma and spacecraft charging. Okuda, H.; Kan, J.R. (Plasma Physics Laboratory, Princeton University, P. O. Box 451, Princeton, New Jersey 08544). *Physics of Fluids;* **30**: No. 1, 209-220(Jan 1987).

Injection of a nonrelativistic electron beam into a fully ionized plasma from a spacecraft including the effect of charging has been studied using a one-dimensional particle simulation model. It is found that the spacecraft charging remains negligible and the beam can propagate into a plasma, if the beam density is much smaller than the ambient density. When the injection current is increased by increasing the beam density, significant spacecraft charging takes place and the reflection of beam electrons back to the spacecraft reduces the beam current significantly. On the other hand, if the injection current is increased by increasing the beam energy, spacecraft charging remains negligible and a beam current much larger than the thermal return current can be injected. It is shown that the electric field caused by the beam—plasma instability accelerates the ambient electrons toward the spacecraft thereby enhancing the return current.

23787 High-resolution studies of the HF ionospheric modification interaction region. Duncan, L.M.; Sheerin, J.P. (Los Alamos National Lab., NM). *Journal of Geophysical Research;* **90**: No. A9, 8371-8376(1 Sep 1985).

Incoherent backscatter radar studies were conducted of the HF ionospheric modification interaction region using the facilities of the Arecibo Observatory. Very high relative spatial and temporal resolutions were achieved. These measurements resolve the miniovershoot (2-10 ms after HF on) and main overshoot (20-40 ms after HF on) plasma wave excitation features. The main overshoot phenomenon is observed to develop very reproducibly with enhancements of a factor of 10 greater than the steady state HF-enhanced plasma line intensity. However, this main overshoot effect is strongly suppressed for HF off times of less than 100 ms. In general, the miniovershoot excitation is found to occur 800-1000 m below the main overshoot excitation height. In addition, in one case, a small plasma line enhancement is detected at very early times (< 1 ms) distinct from the miniovershoot and originating at a greater height. The main overshoot and the steady state enhanced plasma line both develop at essentially the same altitude. However, the interaction layer is observed to broaden by several hundred meters during the main overshoot relaxation. Possible explanations for these effects are proposed using a combination of the theories of soliton formation and collapse, wave ducting, profile modification, parametric instabilities, and other interactive processes. 25 references, 6 figures.

23788 (AD-A—175692/3/XAB) Dynamics of cluster dissociation following multiphoton ionization. Castleman, A.W. (Pennsylvania State Univ., University Park (USA). Davey Lab.). 1986. 6p. NTIS, PC A02/MF A01.

Pub. in Advances in Laser Science, ser 6, 483-487(1986).

A major advance in the study of unimolecular dissociation and the spectroscopy of clusters has become available through the use of multiphoton ionization coupled with a reflectron introduced into the drift region of a time-of-flight mass spectrometer. Using single and two-color tunable pulsed lasers, the excess energy introduced into a cluster can be well controlled. The power of this method is demonstrated by the results of recent investigations of hydrogen-bonded clusters which, following ionization, lead to an internal ion-molecule reaction, and cluster fragmentation. The role of dissociation and the influence of the thermochemical stability of cluster ions in effecting the appearance of magic numbers in certain cluster distributions is discussed. The application of this method in determining ionization potentials of probe molecules following successive clustering with a solvent species is also presented.

23789 (AD-A—175727/7/XAB) Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986. Biondi, M.A.; Johnsen, R. (Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy). 31 Aug 1986. 16p. NTIS, PC A02/MF A01.

Experimental studies were carried out of ion-molecule reactions and of electron-ion recombination of interest for modeling the normal and disturbed regions of the earth's upper atmosphere. Drift tube and microwave afterglow techniques were employed for these studies. Rates were determined for the oxidation reactions of zirconium ions, and theoretical models for the temperature dependence of three-body diatomic ion/diatomic gas were developed. The electron-temperature dependence of the recombination of NO^+ and NO^+ ions has been measured over a wide range of electron temperatures.

23790 (AD-A—175751/7/XAB) Interaction of an adsorbed atom with a laser. Technical report. Arnoldus, H.F.; van Smaalen, S.; George, T.F. (State Univ. of New York, Buffalo (USA). Dept. of Chemistry). Dec 1986. 60p. (UBUFFALO/DC—86/TR-23). NTIS, PC A04/MF A01.

The irradiation by infrared laser light of an atom adsorbed on the surface of a harmonic crystal is considered. The dynamic coupling between the atom (its motion) and the substrate degrees of freedom (phonon field) in the presence of a confining potential well (van der Waals bond between atom and crystal) gives rise to thermal relaxation of this adbond configuration. Both the atom and the substrate are assumed to be transparent, but the bond is allowed to have non-vanishing dipole-moment matrix elements, which couple the external field to the adsorbate. The equation of motion for the reduced adbond density operator is obtained with reservoir theory, and the relaxation constants are expressed in properties of the crystal. With a similar method, the spectral profile for absorption of weak radiation is derived. Subsequently, the illumination by a strong finite-linewidth laser field which is in close resonance with a single transition of the adbond is examined. The optical Bloch equations in operator torm are derived and applied to study the process of laser heating of the crystal. It is pointed out how this mechanism can be understood as resulting from (multi)photon-phonon conversion reactions which are mediated by the adbond.

23791 (BNL—39373) A sputtering derived atomic oxygen source for studying fast atom reactions. Ferrieri, R.A.; Chu, Y.Y.; Wolf, A.P. (Brookhaven National Lab., Upton, NY (USA)). 10 Nov 1986. Contract AC02-76CH00016. 8p. (CONF-8611131—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006465.

From NASA workshop on atomic oxygen effects; Pasadena, CA, USA (10 Nov 1986).

A novel technique for generation of fast atomic oxygen has been developed. These atoms are created by ion beam sputtering from metal oxide surfaces. Mass resolved ion beams at energies up to 60 KeV are produced for this purpose using a 150 cm Isotope Separator. Studies have shown that particles sputtered with 40 KeV Ar^+ on Ta_2O_5 were dominantly neutral and exclusively atomic. The atomic oxygen also resided exclusively in its ^3P ground-state. The translational energy distribution for these atoms peaked at ca 7 eV (the metal-oxygen bond energy). Additional measurements on V_2O_5 yielded a bimodal distribution with the lower energy peak at ca 5 eV coinciding reasonably well with the metal-oxygen bond energy. The 7 eV source was used to investigate fast oxygen atom reactions with the 2-butene stereoisomers. Relative excitation functions for H-abstraction and π-bond reaction were measured with trans-2-butene. The abstraction channel, although of minor relative importance at thermal energy, becomes comparable to the addition channel at 0.9 eV and dominates the high-energy regime. Structural effects on the specific channels were also found to be important at high energy. 11 refs., 2 figs.

23792 (CONF-860316—13) Multiphoton ionization in intense ultraviolet laser fields. Johann, U.; Luk, T.S.; McIntyre, I.A.; McPherson, A.; Schwarzenbach, A.P.; Boyer, K.; Rhodes, C.K. (Illinois Univ., Chicago (USA). Dept. of Physics). Mar 1986. Contract AC02-83ER13137. 12p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004729.

From Topical meeting on short wave length coherent radiation; Monterey, CA, USA (24 Mar 1986).

The mechanism of collision-free multiphoton ionization of rare gases irradiated with ultraviolet radiation at an intensity of up to $\sim 10^{16}$ W/cm^2 at 248 nm and a pulse length of $\sim$0.5 ps and $\sim 10^{15}$ W/cm^2 at 193 nm and $\sim$5ps, respectively, has been studied by observing the electron energy spectra and ion charge state threshold intensities. The formation of multiply charged ions by a sequential process of ionization has been directly detected in the electron energy spectra in the form of a characterisitic pattern of interwoven above threshold ionization (ATI) ladder line series. The threshold intensities for ion production have been compared with the Keldysh model and were found to be in good agreement for light ions (Ne) and consistently lower for heavier ions (Xe), scaling with the atomic number. These measurements, together with estimates of the ion population dynamics during the rise of the laser pulse can be reasonably understood on the basis of a single electron picture. 16 refs., 5 figs.

23793 (CONF-870152—1) High charge state, ion-atom collision experiments using accel-decel. Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Graham, W.G. (Western Michigan Univ., Kalamazoo (USA). Dept. of Physics; Ulster Univ., Coleraine (UK). Dept. of Physics). 1987. Contract AC02-83ER13116. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005814.

From Workshop on opportunities for atomic physics using slow highly-charged ions; Argonne, IL, USA (12 Jan 1987).

Recent studies of $_{16}S^{13+}$ + He collisions between 2.5 and 200 MeV, which were made using the accel-decel technique with the Brookhaven National Laboratory coupled MP tandem Van de Graaff accelerators, are discussed. Cross sections were measured for single electron-capture and -loss as well as K x rays correlated to electron-capture. Other planned ion-atom collision experiments requiring accel-decel are also presented. 18 refs., 3 figs.

23794 (CONF-8609244—1) Faraday discussion No. 82: Dynamics of molecular photofragmentation: Comment on papers No. 4 and No. 10. O'Halloran, M.A. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004671.

From Dynamics of molecular photofragmentation conference; University of Bristol, UK (15 Sep 1986).

The polarization response of the laser-induced fluorescence probe of the CN fragment produced in the photodissociation of ICN at 249 nm. The response was measured with the detector in two experimental configurations (parallel and perpendicular to the polarization of the laser). A small discrepancy was observed between the alignments as determined for the two experimental configurations. This discrepancy occurred since the laser was narrower than the Doppler width of the transition, thus only molecules with velocity projections on the probe were observed. (WRF)

23795 (CONF-8609252—2) Transfer ionization in 0.5-1.5 MeV/u O^{5-8+} + He collisions. Tanis, J.A.; Clark, M.W.; Price, R.; Ferguson, S.M.; Olson, R.E. (Western Michigan Univ., Kalamazoo (USA); Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.); Missouri Univ., Rolla (USA)). 1986. Contract AC02-83ER13116. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87005810.

From Conference on the physics of multiple charged ions; Groningen, Netherlands (17 Sep 1986).

Transfer ionization (TI), in which electron capture is accompanied by loss of the other electron from the target, been measured for 0.5 to 1.5 MeV/u 0/sup q/$^+$ ions (q = 5-8+) colliding with helium. These new measurements, in conjunction with previous measurements at lower energies, are used to formulate a scaling rule to describe the projectile energy and charge state dependences of TI for collisions involving helium targets. 10 refs., 2 figs.

23796 (CONF-8609252—3) L-shell resonant transfer and excitation for NE-like niobium ions. Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Graham, W.G.; McFarland, R.H.; Mowat, J.R.; Mueller, D.W.; Stockli, M.P.; Berkner, K.H.; McDonald, R.J. (Western Michigan Univ., Kalamazoo (USA). Dept. of Physics; Ulster Univ., Coleraine (UK). Dept. of Physics; Missouri Univ., Rolla (USA). Dept. of Physics; North Carolina State Univ., Raleigh (USA). Dept. of Physics; Louisiana State Univ., Baton Rouge (USA). Dept. of Physics; Kansas State Univ., Manhattan (USA). Dept. of Physics). Sep 1986. Contract AC02-83ER13116. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005911.

From Conference on the physics of multiple charged ions; Groningen, Netherlands (17 Sep 1986).

Projectile excitation and charge transfer (capture) can occur simultaneously in a single encounter with a target atom through the electron-electron interaction between a projectile electron and a weakly bound target electron. This process is referred to as resonant transfer and excitation (RTE). L-shell RTE has been investigated for 230 to 610 MeV Nb^{31+} (neonlike) ions incident on H_2. 11 refs., 1 fig. (WRF)

23797 (CONF-8609257—1) Electron-impact ionization data for the Fe isonuclear sequence. Pindzola, M.S.; Griffin, D.C.; Bottcher, C.; Younger, S.M.; Hunter, H.T. (Oak Ridge National Lab., TN (USA); Auburn Univ., AL (USA); Rollins Coll., Winter Park, FL (USA); Lawrence Livermore National Lab., CA (USA)). 25 Nov 1986. Contract AC05-84OR21400. 63p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87004420.

From IAEA advisory group meeting on atomic data for fusion plasma modelling; Vienna, Austria (18 Sep 1986).

Atomic data for the electron-impact ionization of ions in the Fe isonuclear sequence is reviewed. The best available data are identified. Comments are made on current research activities leading to future data for Fe ions. 23 refs., 29 figs., 12 tabs.

23798 (CONF-8611124—4) Correlated double electron capture in slow, highly charged ion-atom collisions. Stolterfoht, N.; Havener, C.C.; Phaneuf, R.A.; Swenson, J.K.; Shafroth, S.M.; Meyer, F.W. (Oak Ridge National Lab., TN (USA); Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)). 1986. Contract AC05-84OR21400. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007375.

From 3. international workshop on cross sections for fusion and other applications; College Station, TX, USA (6 Nov 1986).

Recent measurements of autoionization electrons produced in slow, highly charged ion-atom collisions are reviewed. Mechanisms for double electron capture into equivalent and nonequivalent configurations are analyzed by comparing the probabilities for the creation of $L_1L_{23}X$ Coster Kronig electrons and L-Auger electrons. It is shown that the production of the Coster-Kronig electrons is due to electron correlation effects whose analysis leads beyond the independent-particle model. The importance of correlation effects on different capture mechanisms is discussed. 28 refs., 6 figs.

23799 (DOE/ER/13394—4) Studies of autoionizing states relevant to dielectronic recombination: Progress report, July 1, 1986-June 30, 1987. Gallagher, T.F. (Virginia Univ., Charlottesville (USA). Dept. of Physics). Mar 1987. Contract FG05-85ER13394. 21p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87007765.

Systematic studies of the Sr 5pns and 5pnd autoionizing states are described. Specifically the experimental determination of energy levels and autoionization rates and interchannel interaction from the total excitation spectra is described as well as the quantum defect theory analysis of these diverse data leading to the determination of a few physically significant parameters. In addition measurements of the angular and energy distributions of the ejected electrons using a recently constructed energy analyzer are described. Finally, the development of the theoretical framework to analyze these data is described.

23800 (DOE/ER/13549—T1) Electron transfer ionization and excitation in atomic collisions: Progress report. Winter, T.G. (Pennsylvania State Univ., University Park (USA). Dept. of Physics). 15 Feb 1987. Contract FG02-86ER13549. 7p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006659.

A brief summary is presented on the theoretical research on atomic collision processes of electron transfer, ionization, and excitation. (WRF)

23801 (GSI—86-25-Prepr.) Spectroscopy of heavy few-electron ions. Mokler, P.H. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jul 1986. 31p. (CONF-8607101—2-Prepr.). NTIS (US Sales Only), PC A03/MF A01. File Number DE87751184.

From 18. europhysics conference of the European Group for Atomic Spectroscopy (EGAS-18); Marburg, F.R. Germany (8 Jul 1986).

In this paper we ask first, why is it interesting to investigate heavy-few electron ions. Then the various accelerator-based methods to produce heavy few-electron ions are discussed. In the main part an overview on available heavy few-electron ion data and current experiments is given. The summary will end up with future aspects in this field.

23802 (GSI—86-33-Prepr.) Experimental summary. Kienle, P. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Sep 1986. 20p. (CONF-8606183—8-Prepr.). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751185.

From NATO international advanced course on physics of strong fields; Maratea, Italy (1 Jun 1986).

The author reviews the experimental results on positron production in heavy ion collisions. (HSI).

23803 (GSI—86-34-Prepr.) Anomalous positron emission in heavy ion-collisions. Kienle, P. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Sep 1986. 17p. (CONF-860833—4-Prepr.). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751229.

From 10. international conference on atomic physics; Tokyo, Japan (25 Aug 1986).

In section two we shortly present the experimental methods and first results on positron lines. Section three deals with the dependence of the positron line production on the charge of the collision system, bombarding energy and scattering angle. The results of the first e/sup +/-e/sup -/-coincidence studies are reviewed in section 4. In the last paragraph we make some remarks on future developments of the experimental methods.

23804 (IC—86/157) Elastic scattering of electrons from inert gases: 5. Argon and krypton in the vicinity of Ramsauer-Townsend minima and on the choice of pseudo-states. Fon, W.C. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701524.

Recently, several electron scattering experiments using improved experimental techniques have been reported for Ar and Kr in the region of Ramsauer-Townsend minima. The calculations of Fon et al. on electrons colliding with inert-gas atoms are extended to examine these experimental data. These calculations using a single pseudo-state to account for the dipole polarisability of the ground state atom while ignoring a whole host of excitation mechanisms, have been the subject of considerable controversy (e.g. Reinhardt 1981; Walters 1981). The answers to the questions raised by Walters (1981) may well lie in the present calculation and those of Fon et al. (1983, 1984) in which the /sup 1/P pseudo-states used in these calculations give polarisabilities at least 15% larger than the experimental values. 45 refs, 6 figs, 6 tabs.

23805 (IC—86/231) Time evolution of vibrational states of hydrogen molecule adsorbed on Fe(111) surface. Gryko, J. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701548.

A simple model of hydrogen molecule interacting with two surface atoms is used to study the time evolution of the population of vibration levels of the hydrogen molecule. 5 refs, 7 figs.

23806 **(IC—86/242) Energy levels of the single excited states in the boron isoelectronic sequence.** El-Sherbini, T.M.; Mansour, H.M.M.; Farrag, A.A.; Rahman, A.A. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701553.

Energy levels of the single excited 1S/sup 2/2S/sup 2/ns(/sup 2/S), 1s/sup 2/2s/sup 2/np(/sup 2/P), 1s/sup 2/2s/sup 2/nd(/sup 2/D) and 1s/sup 2/2s/sup 2/nf(/sup 2/F), n=3-8 states for the boron isoelectronic sequence are calculated using the simple configuration Hartree-Fock method. Good agreement is obtained between our results and previous experimental and theoretical data. 9 refs, 3 figs, 15 tabs.

23807 **(IC—86/260) On the treatment of Moeller and Breit-potentials and the covariant two-body equation for positronium and muonium.** Barut, A.O. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701556.

A consistent non-perturbative treatment of the relativistic Moeller potential is proposed and the application of a covariant two-body equation derived from field theory to the spectra of positronium and muonium is discussed. 10 refs.

23808 **(INIS-mf—10325) Study of the positron production in uranium-uranium collisions.** Clemente, M. (Technische Univ. Muenchen, Garching (Germany, F.R.). Fakultaet fuer Physik). 21 Jul 1983. 95p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87751196.

In the present thesis the positron production in the high Coulomb field of two /sup 238/U nuclei in the heavy ion collision for projectile energies in the range of the Coulomb threshold (5.7-6.2 MeV/u) was studied. The energy spectra of the positrons which were taken up in coincidence to the scattered particles exhibit unexpectedly lines. These are superposed to a continuous spectrum which can be well described by the calculated pair production in a time-dependent Coulomb field and from nuclear decays. The energy of the positron line varies in dependence on the incident energy and the particle scattering angle between 311+-7 keV (E/sub p/=5.73 MeV/u; θ/sub lab/=38/sup 0/-52/sup 0/) and 226 +- 17 keV (E/sub p/=6.2 MeV/u; θ/sub lab/=25.5/sup 0/-29/sup 0/). At fixed scattering angle around 42/sup 0/ in the laboratory system the line width grows with increasing incident energy from 56 +- 9 keV (5.73 MeV/u) to 219 +- 100 keV (6.2 MeV/u). In this angular range at 5.73 MeV/u and 5.9 MeV/u a maximum in the cross section is observed. For smaller scattering angles of 26/sup 0/ < or approx.θ/sub lab/< or approx.38/sup 0/ the positron spectrum shows at the lowest incident energy a smooth distribution while at the higher projectile energies also for these angles a line occurs. (orig./HSI).

23809 (INIS-mf—10589, pp 116-117) **Internal conversion electron spectroscopy used to non-destructive determination of /sup 99m/Tc valence state in solid samples.** Dragoun, O.; Fiser, M.; Brabec, V.; Kovalik, A.; Kuklik, A.; Rysavy, M. (Ceskoslovenska Akademie Ved, Rez. Ustav Jaderne Fyziky). 1985. (In Czech). NTIS (US Sales Only), PC A07/MF A01. File Number DE87701626. (CONF-8508223—Pt.1-Vol.1).

From 8. conference of Czechoslovak physicists; Bratislava, Czechoslovakia (26 Aug 1985).

23810 (INIS-SU—401, pp 55-59) **Additional effective mechanism of exciting multicharged ions in a dense plasma.** Ragozin, E.N. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780111.

Kratkie Soobshcheniya po Fizike.; No. 1.

In Experimental and theoretical physics. Collection.

A new efficient mechanism of multicharged ion excitation in dense plasma is studied. The mechanism is conditioned by radiative-collision ionization of autoionization states of ion of the preceeding ionization ratio (X/sub Z/a/sub 0/+c -> X/sub Z-I//sup anl/ -> Xσ/sub Z/(a)+e).

23811 **(LA-UR—87-356) Muonium and MEGA.** White, D.H. (Los Alamos National Lab., NM (USA)). Oct 1986. Contract W-7405-ENG-36. 21p. (CONF-8610183—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006050.

From LAMPF users group meeting; Los Alamos, NM, USA (1 Oct 1986).

Two types of experiments on muonium are described. The first measures the hyperfine structure interval in muonium, and the second measures the Lamb shift. Another type of experiment is described which searches for the transition $(\mu^+e^-)\rightarrow(\mu^-e^+)$. The MEGA experiment is then discussed which searches for the reaction $\mu \rightarrow e + \gamma$. 13 figs., 3 refs. (LEW)

23812 **(LBL—22640) The Lamb shift in heliumlike uranium (U^{90+}).** Munger, C.T. Jr. (California Univ., Berkeley (USA)). Jan 1987. Contract AC03-76SF00098. 127p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87006929.

An experimental value of 70.4 (8.3) eV for the one-electron Lamb shift in uranium is reported, in agreement with the theoretical value of 75.3 (0.4) eV. The Lamb shift is extracted from a beam-foil time-of-flight measurement of the 54.4 (3.4) ps lifetime of the 1s 2p/sub 1/2/ $^3P_0$ state of heliumlike (two-electron) uranium. 18 figs.

23813 **(NORDITA—84/39-Prepr.) Configurational statistics of a polymer chain with random sequence of elements.** Obukhov, S.P. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). Oct 1984. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751245.

It is shown that for a disordered polymer chain the upper critical dimension is d/sub c/=3. At $d \leqq 3$ the effect of randomness increases on large scales due to the space correlations of attractive and repulsive monomers, but it can also be screened by repulsive two- or three-body interaction. The renorm group equations indicate that near the theta point it can be the large dispersion of sizes of polymers which differ only in sequences of elements.

23814 **Spin—boson model for spectroscopy involving nonadiabatically coupled potential energy surfaces.** Coalson, R.D. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **86**: No. 2, 995-1009(15 Jan 1987). Contract W-7405-ENG-36.

A spin—boson model, analogous to models commonly used to study multidimensional tunneling, is formulated for the problem of computing optical spectra when nonadiabatically coupled Born—Oppenheimer surfaces are involved. The model is implemented numerically for a one-dimensional prototypical case. It is demonstrated that time kernels associated with low resolution electronic absorption spectra and Raman scattering cross sections can be obtained without excessive effort even in strong coupling regimes where perturbation expansions become inefficient. The outlook for extension to more complicated systems is discussed.

23815 **High intensity 5 eV CW laser sustained O-atom exposure facility for material degradation studies.** Cross, J.B.; Spangler, L.H.; Hoffbauer, M.A.; Archuleta, F.A. (Los Alamos National Lab., NM). *SAMPE (Society for the Advancement of Material and Process Engineers) Quarterly;* **18**: No. 2, 41-47(Jan 1987).

An atomic oxygen exposure facility was developed for studies of material degradation. The goal of these studies is to provide design criteria and information for the manufacture of long life (20 to 30 years) construction material for use in low earth orbit. The studies that are being undertaken using the facility will provide (1) absolute reaction cross sections for use in engineering design problems, (2) formulations of reaction mechanisms for use in selection of suitable existing materials and design of new more resistant ones, and (3) calibration of flight hardware (mass spectrometers, etc.) in order to directly relate experiments performed in low earth orbit to ground based investigations. 15 references, 10 figures.

23816 Direct determination of the stereochemical structure of CH_4i. Vager, Z.; Kanter, E.P.; Both, G.; Cooney, P.J.; Faibis, A.; Koenig, W.; Zabransky, B.J.; Zajfman, D. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review Letters;* **57**: No. 22, 2793-2795(1 Dec 1986). Contract W-31-109-ENG-38.

The use of the Coulomb-explosion technique combined with a new multiparticle detector, extremely thin targets, and low-excitation ion source has enabled a direct measurement of the complete stereochemistry of the CH_4^+ molecular ion. Preliminary analysis of the data gives a structure consistent with predictions of the Jahn-Teller-distorted ground state. We outline the techniques by which this method can be generalized to determine directly complex vibrational motions in polyatomic molecules.

23817 Between the local-mode and normal-mode limits. Scott, A.C.; Lomdahl, P.S.; Eilbeck, J.C. (Los Alamos National Lab., NM). *Chemical Physics Letters;* **113**: No. 1, 29-36(4 Jan 1985).

A simple model system is introduced for the vibrational analysis of polyatomic molecules. This classical system is based on complex mode amplitudes and reduces to either the normal-mode (NM) or the local-mode (LM) description in appropriate limits. Upon analysis without perturbative assumptions, the system exhibits sinusoidal, periodic, quasi-periodic and chaotic behaviors between the NM and the LM limits. 29 references, 4 figures, 1 table.

23818 (DOE/ER/13493—1) Theory of condensable gases: Progress report, March 15, 1986-February 28, 1987. White, J.A. (American Univ., Washington, DC). Nov 1986. Contract FG05-86ER13493. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007318.

A theory of the contribution of short to intermediate wavelength random fluctuations to thermodynamic properties has been worked through for a model system of interacting molecules. The object has been to obtain a simple but good first approximation to the thermodynamic behavior of real systems both near the critical point and over wide regions of temperature, density, and pressure in the surrounding gas, liquid, and supercritical phases. The simplest version of the model extends a modern variant of the mean field theory of Van der Walls by introducing a single new parameter that characterizes the finite range of the attractive intermolecular interactions. The theory thus contains the following three molecular parameters, including those of Van der Waals: b = volume of repulsive cores, a = energy-volume product for attractive interactions, and the new parameter, c = volume of attractive halos, i.e., the volume of the region of attractive interactions that surrounds the repulsive cores.

23819 (UCID—21006) Lagrangian-like equations of hydrodynamics with mass diffusion. Crowley, W.P. (Lawrence Livermore National Lab., CA (USA)). 14 Oct 1986. Contract W-7405-ENG-48. 8p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007522.

The relation between mean kinetic energy and acceleration are derived by using an Eulerian representation of inviscid hydrodynamics. (WRF)

23820 (INIS-mf—10589) Eighth conference of Czechoslovak physicists. Part I, Vol. 1. Sebesta, J.; Povinec, P. (eds.). (Jednota Ceskoslovenskych Matematiku a Fyziku, Prague). 1985. 132p. (In Czech, Slovak). (CONF-8508223—Pt.1-Vol.1). NTIS (US Sales Only), PC A07/MF A01. File Number DE87701626.

From 8. conference of Czechoslovak physicists; Bratislava, Czechoslovakia (26 Aug 1985).

Conference papers were published in two parts. Part I contains the abbreviated texts of original contributions, part II the full texts of papers read at the plenary sessions and of invited papers. Part I was published in two volumes, volume 1 including contributions from the fields of elementary particle physics, nuclear physics, plasma physics, physics of metals and semiconductor physics. Of these, 66 papers falling into the INIS subject scope were inputted in INIS. (A.K.).

23821 (SLAC-PUB—4148-Extd.Ver.) Networking through the new phone system: The future of telecommunications. Struven, W. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Dec 1986. Contract AC03-76SF00515. 15p. (CONF-870249—1-Extd.Ver.). NTIS, PC A02. File Number DE87005972.

From Computing high energy physics; Pacific Grove, CA, USA (2 Feb 1987).

This paper traces the history of the telephone system from 1850 to present, and describes the "new" telephone companies. The immediate problems of 56 KB data and 64 KB voice channels are discussed together with their proposed solution. The Integrated Digital System Network concept (IDSN) is described, and the proposals to build a true end-to-end digital telephone network are described. The Stanford University-Northern Telecom information test facility is described. The current and planned networks in the US and around the world have also been included in this paper.

23822 Future plans for HEP computing in the U.S. . Ballam, J. (Stanford Linear Accelerator Center, Menlo Park, CA). pp 146-164 of Computing in high energy physics. Proceedings of the conference held in Amsterdam, The Netherlands, 25-28 June, 1985. Hertzberger, L.O.; Hoogland, W. (eds.). Amsterdam, Netherlands; North-Holland (1986). (CONF-8506157—).

From Conference on computing in high energy physics; Amsterdam, Netherlands (25 Jun 1985).

The computing requirements of the U.S. HEP Community are set forth. These will be dominated in the next five years by the panti p (TEV I) and e^+e^- (SLC and CESR) experiments. The ensuing period will be almost completely driven by the data generated by the superconducting super collider (SSC). Plans for near term computing are presented along with speculations for the SSC. Brief descriptions of accelerator and theoretical physics plans are also presented. (Auth.).

23823 Status of networking for high energy physics in the United States. Kunz, P.F. (Stanford Linear Accelerator Center, Menlo Park, CA). pp 165-172 of Computing in high energy physics. Proceedings of the conference held in Amsterdam, The Netherlands, 25-28 June, 1985. Hertzberger, L.O.; Hoogland, W. (eds.). Amsterdam, Netherlands; North-Holland (1986). (CONF-8506157—).

From Conference on computing in high energy physics; Amsterdam, Netherlands (25 Jun 1985).

Networks are used extensively for High Energy Physics in the United States. Although the networks have grown in an ad hoc manner with connections typically being made to satisfy the needs of one detector group, they now encompass to large fraction of the U.S. HEP community in one form of another. This paper summarizes the current status and experience with networks. (Auth.).

23824 Fermilab advanced computer program multi-microprocessor project. Nash, T.; Areti, H.; Biel, J.; Case, G.; Cook, A.; Fischler, M.; Gaines, I.; Hance, R.; Husby, D.; Zmuda, T. (Fermilab, Batavia, IL). pp 375-384 of Computing in high energy physics. Proceedings of the conference held in Amsterdam, The Netherlands, 25-28 June, 1985. Hertzberger, L.O.; Hoogland, W. (eds.). Amsterdam, Netherlands; North-Holland (1986). (CONF-8506157—).

From Conference on computing in high energy physics; Amsterdam, Netherlands (25 Jun 1985).

Fermilab's Advanced Computer Program is constructing a powerful 128 multi-microprocessor system for data analysis in high-energy physics. The system will use commercial 32-bit microprocessors programmed in Fortran-77. Extensive software supports easy migration of user applications from a uniprocessor environment to the multiprocessor and provides sophisticated program development, debugging, and error handling and recovery tools. This

system is designed to be readily copied, providing computing cost effectiveness of below 2200 US dollars per VAX 11/780 equivalent. The low cost, commercial availability, compatibility with off-line analysis programs, and high data bandwidths (up to 160 MByte/sec) make the system an ideal choice for applications to on-line triggers as well as an offline data processor.

23825 **Resume on vector and parallel processing in HEP.** Kunz, P.F. (Stanford Linear Accelerator Center, Menlo Park, CA). pp 385-390 of Computing in high energy physics. Proceedings of the conference held in Amsterdam, The Netherlands, 25-28 June, 1985. Hertzberger, L.O.; Hoogland, W. (eds.). Amsterdam, Netherlands; North-Holland (1986). (CONF-8506157—).

From Conference on computing in high energy physics; Amsterdam, Netherlands (25 Jun 1985).

HEP computing needs have been dominated by experimentalist's event processing, Monte Carlo generation, and analysis requirements which have become very large with the advent of large 4π detectors. However, HEP needs are no longer completely dictated by the experimentalists, the needs of theory and accelerator design must also be considered. The author outlines the uses to which vector and parallel processing can be put in HEP. (Auth.).

23826 **Status of the development of a parallel-pipelined data driven processor capable of analyzing up to 10^5 events per second on-line.** Church, M.; Gottschalk, E.; Hylton, R.; Knapp, B.; Sippach, W.; Stern, B.; Christian, D.; Guttierez, G.; Holmes, S.; Wehmann, A. (Columbia Univ., New York, NY; Fermi National Accelerator Lab., Batavia, IL). pp 247-251 of Computing in high energy physics. Proceedings of the conference held in Amsterdam, The Netherlands, 25-28 June, 1985. Hertzberger, L.O.; Hoogland, W. (eds.). Amsterdam, Netherlands; North-Holland (1986). (CONF-8506157—).

From Conference on computing in high energy physics; Amsterdam, Netherlands (25 Jun 1985).

The authors are developing a new approach to the problems of data acquisition and analysis in elementary particle physics. This technique, known as a hardware processor, allows the complete reconstruction of complex events with full precision at rates up to 10^5 events/second. The technique is central to experiments E690 at Fermilab and E766 at Brookhaven National Laboratory which are probing the hadroproduction of strange, charm and bottom particles. (Auth.).

23827 **(DOE/ER/40033—123) Preliminary results from experiment UA6 on inclusive J/psi production in pp interactions at $\sqrt{s}$ = 24.3 GeV.** Malamud, E. (Rockefeller Univ., New York (USA); European Organization for Nuclear Research, Geneva (Switzerland)). 1986. Contract AC02-81ER40033. 7p. (CONF-860977—2). NTIS, PC A02. File Number DE87005904.

From Antiproton '86: European symposium on nucleon-antinucleon interactions; Thessalonika, Greece (1 Sep 1986).

The UA6 detector consists of two arms, each containing a MWPC-magnet spectrometer, a TRD for electron identification, and a finely-segmented electromagnetic calorimeter. J/psi production has been studied using the e^+e^- decay mode. A clean J/psi signal is observed from an analysis of approximately half of our available anti p data. Problems of normalization and comparison with the pp cross section are discussed.

23828 **(IFVE-OEF—85-19) Study of D(1285) -> K/sup +/K/sup -/π/sup 0/ decay and D(1285)- and E(1420)-mesons production in exclusive reactions, induced by π/sup -/- and K/sup -/-mesons at 32.5 GeV/c.** Bitukov, S.I.; Viktorov, V.A.; Golovkin, S.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701422.

D(1285) and E(1420)-mesons production in charge-exchange reactions induced by π/sup -/ and K/sup -/-mesons at 32.5 GeV/c has been studied. The measured cross sections allowed one to derive limitations for the mixing angle in the axial-vector meson nonet. This means that E(1420)-meson consists mainly of strange quarks. The invariant mass distribution for the kaon pair in D(1285) -> K/sup +/K/sup -/π/sup 0/ decay with statistics by an order of magnitude higher than the available data was obtained. The differential spectrum dN/dmsub(Ksup(+)Ksub(-)) analysis carried out in the delta-dominance model shows that delta(980)-meson cannot be described as a Breit-Wigner resonance with small width. The effective width for delta-meson at the point of $\sqrt{s}$=1 GeV/c/sup 2/ GITAsub(delta) is greater than 180 MeV/c/sup 2/. It points to a strong coupling of delta-meson to hadrons. 12 refs.; 6 figs.

23835 (JINR—R-1-85-939) Properties of pC-interactions at Psub(p)=10 GeV/c with the emission of cumulative pions and protons. Armutlijski, D.; Akhababyan, N.; Bartke, E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1985. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701423.

Submitted to the journal Sov. J. Nucl. Phys. .

About 2000 inelastic pC-interactions at Psub(p)=10 GeV/c with the emission of cumulative pions and protons have been selected and analyzed in the pictures from the 2m propane bubble chamber. The data are obtained both on general characteristics of secondary particles in these events and on interactions with the emission of several cumulative hadrons. Invariant inclusive cross sections of the charged cumulative hadron production including their dependence on the emission angle and the type of cumulative interaction are studied. Besides, leading cumulative hadrons and γ-quanta from the decay of π/sup 0/-mesons emitted to the hemisphere of LSC have been investigated. 8 refs.; 2 figs.; 4 tabs.

23836 (KFK—4128) Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction. Kreissl, A. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Physik). Aug 1986. 85p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87751340.

The subjects of this thesis are a measurement of the antiproton magnetic moment, a particle property, with the aim of testing the CPT-theorem for the strong interaction and the investigation of a possible spin-orbit-term of the anti p-nucleus-interaction. For both aspects the information is given in the finestructure-splitting of antiprotonic X-ray-transitions from heavy nuclei, since only for those the splitting is observable. From the finestructure-splitting of the transition 11->10 in /sup 208/Pb the magnetic moment of the antiproton can be calculated. The result of this best measurement up to now is μ sub anti p = (-2.8007 +- 0.0091)μ/sub N/. In between the error bars it confirms the CPT-Theorem and the new average value for the difference of the antiproton magnetic moment from the proton magnetic moment is (μ/sub p/-anti μ sub anti p)/average = (-2.5 +- 3).10/sup -3/. At the same time the limits of our detectors are described and other possibilities are discussed. In /sup 174/Yb one observes a splitting of the last observable transition 9->8, which is influenced by the strong interaction. From our measurement we find that the measured splitting is different from the calculated electromagnetic value and the Lorentz-widths of both line components are different as well. It is ΔE/sup sw/ = 58 +- 25 +- 13 eV and $\Delta\Gamma$ = 195 +- 58 +- 20 eV. As result we find a sign for the existence of a spin-orbit-term of the antiproton-nucleus-interaction. Nevertheless is has to be confirmed in further experiments. (orig./HSI).

23837 (LAL—86-11) Search for single photons at PETRA. Behrend, H.J.; Buerger, J.; Criegee, L. (Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire). 1986. 19p. (DESY—86-050). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751064.

A search for single photons, produced in e^+e^- collisions together with particles interacting only weakly with matter, has been performed using the CELLO detector operating at the PETRA storage ring. From the absence of any signal, an upper limit is set at 15(90%CL) on the number of light neutrino species, and lower limits on various supersymmetric particle masses are derived. For massless photinos, mass degenerate scalar partners of the left and right handed electrons are excluded below 37.7 Gev/c^2 (90%CL).

23838 (LBL—22433) Hard photon processes in electron-positron annihilation at 29 GeV. Gold, M.S. (Lawrence Berkeley Lab., CA (USA)). Nov 1986. Contract AC03-76SF00098. 115p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87006248.

The hard photon processes $\mu\mu\gamma$ and hadrons + γ in e^+e^- annihilation at 29 GeV have been studied. The study is based on an integrated luminosity of 226 pb^{-1} taken at PEP with the Mark II detector. For the $\mu\mu\gamma$ process, a small fraction of non-planar events are observed with missing momentum along the beam direction. The resulting missing energy spectrum is consistent with that expected from higher order effects. The observed cross section is consistent with the predicted cross section for this process, σ/sup exp/σ/sup th/ = .90 +- .05 +- .06. The observed hard photon energy spectrum and mass distributions are found to be in agreement with $O(\alpha^3)$ QED. The measured charge asymmetry is in good agreement with the predicted value, A/sub exp/A/sub th/ = .83 +- .25 +- .12. The $\mu\gamma$ invariant mass distribution is used to place a limit on a possible excited muon coupling $G\gamma/M^*$ for excited muon masses in the range $1 < M^* < 21$ GeV of $(G\gamma/M^*)^2 < 10^{-5}$ GeV^{-2} at a 95% confidence level. In the hadrons + γ process, evidence for final state radiation is found in an excess of events over that predicted from initial state radiation alone of 253 +- 54 +- 60 events. Further evidence for final state radiation is found in a large hadronic charge asymmetry A/sub Had+γ/= (-24.6 +- 5.5)%.

23839 (LUIP—8606) Selected results from light ion experiments at the CERN ISR. Otterlund, I. (Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics). Jun 1986. 32p. (LUNFD6/NFFK—7072-1-31(1986)). NTIS (US Sales Only), PC A03/MF A01. File Number DE87750903.

The burning questions is whether the condition necessary for a transition to quark matter can be reached in nucleus-nucleus collisions. The features of dd and /ALPHA-ALPHA/ events observed at the CERN ISR can provide a quideline for estimating the conditions in collisions between heavy nuclei at high energies. Some of these features are reviewed in this talk.

23840 (PCCF-T—85-04) Baryonic decay of the J/psi and gluon spin. Pallin, D. (Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire). Apr 1985. 160p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751146.

A study of the J/psi state of the charmomium (c antic state) was performed at the D.C.I. collider in Orsay with the DM2 detector. 9 millions of J/psi have been produced, corresponding to more than one half of the actual world statistics. The very simple mecanism of the e^{+-} annihilation into baryon-antibaryon via the J/psi state, allows measurements of the gluon spin through the emitted baryon angular distribution. The analyse of the channels J/psi $\rightarrow$ p antip and Λ antiA, permits to obtain parameters for the angular distributions. These experimental values favour very clearly a vectorial gluon hypothesis, as postulated by the quantum chromodynamics.

23841 Study of the decay B→psiX. Alam, M.S.; Katayama, N.; Kim, I.J.; Sun, C.R.; Tanikella, V.; Bean, A.; Bobbink, G.J.; Brock, I.; Engler, A.; Ferguson, T.; and others. (State University of New York at Albany, Albany, New York 12222). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3279-3285(1 Dec 1986).

We have measured the inclusive branching ratio for B→psiX to be (1.09 +- 0.16 +- 0.21)%, and the exclusive branching ratios for B^-→psiK^- and B-bar ^{0}→psiK-bar /sup */^{0} to be (0.09 +- 0.05)% and (0.41 +- 0.18)%, respectively. The mass difference between neutral and charged B mesons is 1.1 +- 2.1 MeV, while the difference between the mass of Y(4S) and twice the mean B-meson mass is 18.5 +- 3.0 MeV. The psi momentum distribution implies a substantial two-body decay (in agreement with direct measurements), but also some combination of B→psiX with M/sub X/>1.5 GeV, and B→psi'X.

23842 Search for the S meson in antiproton-proton interactions. Fickinger, W.; Marino, R.; Robinson, D.K.; Ashford, V.; Sakitt, M.; Skelly, J. (Case Western Reserve University, Cleveland, Ohio 44106). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3332-3342(1 Dec 1986).

The interaction between antiprotons and protons has been studied in the range 1910 to 1990 MeV center-of-mass energy in a drift-chamber experiment at the Brookhaven Alternating Gradient Synchrotron. The total cross section has been determined at eleven different incident momenta, and the elastic cross section between 8 and 30 deg in the laboratory has been measured with an energy resolution of about 5 MeV. The cross section for annihilation into charged mesons has also been measured, with the same resolution.

There is no evidence in any of these channels for the existence of a narrow resonance.

23843 **Measurement of sin²theta/sub W/ and rho in deep inelastic neutrino-nucleon scattering.** Reutens, P.G.; Merritt, F.S.; MacFarlane, D.B.; Messner, R.L.; Novikoff, D.B.; Purohit, M.V.; Blair, R.E.; Sciulli, F.J.; Shaevitz, M.H.; Fisk, H.E.; Fukushima, Y. (Univ. of Chicago, IL). *Physics Letters [Section] B;* **152B**: No. 5-6, 404-410(14 Mar 1985). Contract AC02-81ER40033.

The authors describe a high statistics measurement from deep inelastic neutrino-nucleon scattering of the electroweak parameters rho and sin²theta/sub W/, performed in the Fermilab narrow-band neutrino beam. Their measurement uses a radius-dependent cut in y = E/sub H/E/sub ν/ which reduces the systematic error in sin²theta/sub W/, and incorporates electromagnetic and electroweak radiative corrections. In a renormalization scheme where sin²theta/sub W/ identical with 1 - m/sub W/²/m/sub Z/², a value of sin²theta/sub W/ = 0.242 +/- 0.011 +/- 0.005 is obtained fixing rho = 1. If both sin²theta/sub W/ and rho are allowed to vary in a fit to their data, the authors measure rho = 0.991 +/- 0.025 +/- 0.009. 19 references, 3 figures, 2 tables.

23844 **Λ production in e^+e^- annihilation at 29 GeV.** Aihara, H.; Alston-Garnjost, M.A.; Bakken, J.A.; Barbaro-Galtieri, A.; Barnes, A.V.; Barnett, B.A.; Blumenfeld, B.J.; Bross, A.D.; Buchanan, C.D.; Chamberlain, O.; Chien, C.Y. (Lawrence Berkeley Lab., CA). *Physical Review Letters;* **54**: No. 4, 274-277(28 Jan 1985). Contract AC03-76SF00098;AA03-76SF00034;AC02-76ER03330.

The inclusive production cross section of Λ, anti Λ in e^+e^- annihilation at a c.m. energy of 29 GeV has been measured with the time-projection-chamber detector at PEP. The average λ, anti λ multiplicity has been measured to be 0.197 +/- 0.012 (stat.) +/- 0.017 (syst.). Λ-antiΛ pairs have been observed in jets for the first time, and the average number of Λ-antiΛ pairs per event has been measured to be 0.042 +/- 0.017 +/- 0.014. 8 references, 3 figures.

23845 **Search for the supersymmetric partners of the Z^0 and W/sup +/-/.** Adeva, B.; Barber, D.P.; Becker, U.; Berdugo, J.; Boehm, A.; Branson, J.G.; Burger, J.D.; Capell, M.; Cerrada, M.; Chang, C.C.; Chang, Y.H. (III Physikalisches Institut, Aachen, West Germany). *Physical Review Letters;* **53**: No. 19, 1806-1809(5 Nov 1984).

The authors report mass limits on the Z^0 and W/sup +/-/, supersymmetric partners of the Z^0 and W/sup +/-/, respectively, using the MARK-J detector at PETRA. The experimental signatures in both cases are acoplanar lepton pairs with missing energy. For the W/sup +/-/, an additional signature is a single energetic lepton. No evidence is found for either the Z^0 (M/sub Z/$_0$ < 35 GeV) or the W/sup +/-/ (M/sub W/ < 25 GeV). 15 references, 2 figures.

23846 **Multinucleon captures of slow antiprotons in complex nuclei and a search for the H dibaryon.** Condo, G.T.; Bugg, W.M.; Handler, T. (Univ. of Tennessee, Knoxville). *Physics Letters [Section] B;* **144B**: No. 1-2, 27-29(23 Aug 1984). Contract W-7405-ENG-26;AS05-76ER03956.

From a sample of 80,000 antiproton annihilations in complex nuclei, a search has been made for those multinucleon reactions which would result in the production of two units of strangeness. No example of such processes has been found, leading to upper limits for the frequencies of production of final states containing 2Λ, $2K^+$, K^- Λ^0, or the H dibaryon of (1-5) x 10^{-4} per anti p annihilation. 13 references, 1 table.

23847 **Anomalous Z decays and g - 2 of the electron.** Suzuki, M. (Univ. of California, Berkeley). *Physics Letters [Section] B;* **143B**: No. 1-3, 237-240(9 Aug 1984). Contract AC03-76SF00098.

If the leptonic Z decays with an energetic photon are interpreted as cascade decays through a new particle, a stringent constraint is imposed on the couplings by the measured value of the magnetic moment of the electron. In models with a fermion E, where Z → e antiE (e antiE) → electron positron γ, the constraint is avoided if E/sub R/ and E/sub L/ are either both singlets or both members of a doublet. 7 references, 2 figures.

23848 **Experimental search for narrow resonances in the reaction $\pi pp \rightarrow \gamma\gamma n$ at 13 GeV/c.** Chiang, I.H.; Johnson, R.A.; Kwan, B.P.; Kycia, T.F.; Li, K.K.; Littenberg, L.S.; Wijangco, A.R.; Halling, A.M.; Hogan, G.E.; Lu, C.G.; McDonald, K.T. (Brookhaven National Lab., Upton, NY). *Physics Letters [Section] B;* **140B**: No. 1-2, 145-148(31 May 1984).

Using a double arm electromagnetic calorimeter the authors have searched for narrow states produced in the exclusive reaction $\pi^-p \rightarrow \gamma\gamma n$ at 13 GeV/c. No enhancements were observed in the mass range 2.0-4.0 GeV/c². For example, the 90% confidence limit on eta/sub c/ production is $\sigma(\pi^-p \rightarrow$ eta/sub c/n) x B(eta/sub c/ $\rightarrow \gamma\gamma) < 44$ pb. 8 references, 3 figures.

6452 Particle Interactions And Properties - Theoretical

REFER ALSO TO CITATION(S) 23770, 23930, 23931, 24013, 24041, 24046, 24046, 24047, 24048, 24049

23849 **(BONN-HE—86-05) L=1 mesons and the four-quark condensate in QCD sum rules.** Govaerts, J.; Viron, F. de; Weyers, J.; Reinders, L.J. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Mar 1986. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751195.

We systematically study the L=1 meson spectrum in the context of QCD sum rules for bilinear quark currents of dimension three. We improve the sum rules by including the α/sub s/ corrections correctly and take into account the running of the coupling constant. A correct prediction for the B(1/sup +-/) meson can be obtained provided there is a sizeable departure of the value of the four-quark condensate <0vertical strokeanti qλ/sup a/qanti qλ/sup a/qvertical stroke0> from its factorized value using the vacuum dominance assumption. For the condensates <0vertical strokeanti qγ/sub μ/λ/sup a/qanti qγ/sub μ/λ/sup a/qvertical stroke0> and <0vertical strokeanti qσ/sub μν/λ/sup a/qanti qσ/sub μν/λ/sup a/qvertical stroke0> no such deviation is observed.

23850 **(DESY—86-032) QCD, γγ and heavy quark physics at LEP.** Ali, A. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Mar 1986. 72p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751224.

This report gives a brief theoretical overview and summarizes the work done by the members of the Working Group on QCD, γγ and Heavy Quark Physics at LEP.

23851 **(DOE/ER/40200—085) Accurate baryon masses from meson masses using potential models and the 1/D expansion.** Imbo, T.D. (Texas Univ., Austin (USA). Center for Particle Theory). Feb 1987. Contract FG05-85ER40200. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006231.

The recently derived ratio of three particle to two particle nonrelativistic binding energies for power law potentials in the leading order of the 1/D expansion, where D is the number of spatial dimensions, is used to investigate the ground state baryon spectrum. Using the phenomenologically successful Martin potential and the known meson masses, it is shown how the above ratio can be utilized to obtain accurate masses for baryons, even those containing light quarks. It is also mentioned how the shifted 1/D expansion may be used to study certain excited baryon states.

23852 **(DOE/ER/40200—086) ZZ production at supercollider energies.** Dicus, D.A.; Wilson, S.L.; Vega, R. (Texas Univ., Austin (USA). Center for Particle Theory). Jan 1987. Contract FG05-85ER40200. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006232.

The invariant mass distribution for pp → ZZ + X is calculated without using the effective W approximation. The exact calculation is found to agree well with the effective W approximation calculation.

23853 (DOE/ER/40200—087) Single W production from heavy Z decay in E_6 theories. Rizzo, T.G. (Texas Univ., Austin (USA). Center for Particle Theory). Feb 1987. Contract FG05-85ER40200. 16p. (IS-J—2453). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006233.

We examine the production of single W bosons in the decay of heavy Z bosons, which are present in the low energy limit of E_6 grand unified theories, via the process $Z' \rightarrow W^+l^-$ anti nu/sub l/. The branching ratio for this process is found to be sensitive to the Z'-fermion couplings as well as the amount of mixing between Z' and the usual standard model Z over a wide range of Z' masses.

23854 (DOE/ER/40272--26) New massive stable particles from superstrings and their detection using a time of flight system. Ruiz-Altaba, M.; White, A.P. (Florida Univ., Gainesville (USA). Dept. of Physics). Oct 1986. Contract FG05-86ER40272. 6p. (UFTP—86-26; CONF-8606215—38). NTIS, PC A02. File Number DE87006235.

From Summer study on the physics of the superconducting super collider; Snowmass, CO, USA (23 Jun 1986).

Prospects for the existence and detection of massive stable particles are considered. We briefly review some previously postulated massive stable candidates and analyze in some detail the possibility that particles containing the new h quark from E_6 be stable, while satisfying cosmological bounds. The experimental requirements for the detection of massive long-lived particles using a time of flight (TOF) system are examined in the context of a Snowmass 1986 "realistic" detector for the SSC.

23855 (EFI—797(24)-85) Inclusive spectra of hadrons in proton-nucleus collisions. Gevorkyan, S.R.; Gulkanyan, G.R.; Kotzinyan, A.M.; Zhamkochyan, V.M. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701413.

A model is proposed, which allows one to describe all exprimental data on inclusive spectra of different hadrons produced on nuclei. The model is based on the following assumptions. After the first inelastic collision with nucleon in the nucleus the proton transforms into some excited system H, which collides with the other nucleons during its passage through the nucleus. Since in inelastic collisions the slow sea partons play the dominant role, the valence quarks of this system H coincide with those of proton. Fragmentation of H into hadrons (as well as into proton) is dilated in the lab system by the Lorentz factor $E/m >> 1$ and so it takes place out of the nucleus. Using the methods of multiple scattering theory one can receive the connection between inclusive spectra on nuclei and those on nucleons. The calculations of inclusive spectra of different hadrons (p, p, πsup(-+), ksup(+-)) were done, and a satisfactory description of the experimental data was obtained. It should be noted that this description was done without introduction of any free parameters. Analogous models are discussed, and their diffference from the method proposed is outlined. 14 refs.; 6 figs.

23856 (EFI—806(33)-85) Peculiarities of the quark-gluon mechanism of the formation of C-even heavy quarkonia in hadron collisions. Egoryan, R.Sh. (Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)). 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701414.

The quark-gluon channel g+q(anti q) -> chisup((J)) +q(anti q) of the formation of C-even states of heavy quarkonia Q anti Q (of chisup((0)), chisup((2)) and chisup((1)) mesons) in hadron collisions is studied. The nonrelativistic character of the Q anti Q-system and the Landau-Yang rules are shown to result in qualitatively different spectra for chisup((0)), chisup((2)) mesons and chisup((1)) meson. Strongly differing from the case of chisup((0.2)) whose spectra in the lowest order of perturbation theory have a polar peculiarity proportionally 1/qsub(perpendicular)sup(2) at transverse momentum qsub(perpendicular) -> 0, the spectrum of chisup((1)) has a logarithmic pole proportionally lnqsub(perpendicular)sup(-2). 3 refs.; 4 figs.

23857 (FNAL/C—86/167) The J/psi trigger-tag for study of weak beauty quark decays at the SSC [Superconducting Super Collider]. Cox, B.; Wagoner, D.E. (Fermi National Accelerator Lab., Batavia, IL (USA); Florida Agricultural and Mechanical Univ., Tallahassee (USA). Dept. of Physics). Dec 1986. Contract AC02-76CH03000. 10p. (CONF-8606215—39). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006282.

From Summer study on the physics of the superconducting super collider; Snowmass, CO, USA (23 Jun 1986).

The weak decays of beauty hadrons offer a unique opportunity at the SSC to study CP violation in a system other than the neutral kaons and provides a long lever arm for searching for new physics if a strategy can be found for triggering on and identifying these decays. We have determined that the decay sequence $B \rightarrow J/psi + X$ followed by the decay of the $J/psi \rightarrow \mu^+\mu^-$ presents an opportunity to both trigger on and to unambiguously distinguish b anti b events from the total cross section events.

23858 (FNAL/Pub—87/19-E) Is there a way to measure the deep-inelastic cross-section using wide-band neutrino beams?. Belusevic, R.; Rein, D. (Fermi National Accelerator Lab., Batavia, IL (USA); Florida Univ., Gainesville (USA); Technische Hochschule Aachen (Germany, F.R.)). Jan 1987. Contract AC02-76CH03000. 15p. NTIS MF A01; 2; GPO Dep. File Number DE87006420.

A method is described for extracting the value of the neutrino flux in a wide-band beam exposure based on computed differential cross-sections for resonance production and quasielastic scattering of neutrinos on nucleons. The resonance production cross-sections, computed by means of a relativistic quark model, are in excellent agreement with measurements of various neutrino-induced exclusive final states performed so far and also with data from inclusive deep-inelastic neutrino interactions. The theoretical uncertainty inherent in the method is estimated to be about 10% and is roughly equal to the systematic error which plagues the measurements of the neutrino flux in present-day narrow-band beams. Before the first Tevatron narrow-band beam data becomes available in a few years time, if at all, this method provides the only reliable way of "measuring" the total neutrino cross-section with the existing wide-band beam data, thus extending the measured energy range by nearly a factor of two.

23859 (IC—86/84) Tensor gluonium spectrum in QCD. Paver, N. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701421.

We examine the 2/sup ++/ gluonium spectrum in the framework of the Gauss-Weierstrass and Finite Energy QCD sum rules. The results of our analysis support the interpretation of the $\theta(1710)$ as a tensor glueball, but they also suggest the existence of at least another state with a mass M> or approx. 2 GeV and a width of about 200 MeV. 14 refs, 8 figs, 2 tabs.

23860 (IC—86/86) On the role of higher twists in describing scaling violation. Chyla, J. (International Centre for Theoretical Physics, Trieste (Italy)). Jun 1986. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701416.

A method of comparing the QCD predictions for nucleon structure functions scaling violation with deep inelastic scattering data is proposed, the main feature of which being the assumption that the value of Λ/sub QCD/ parameter is known independently of perturbative analyses. We conjecture that a suitable way of determination Λ is through lattice Monte Carlo calculations of quantities like hadronic masses and consider the Λ /sub MS/-bar value thus found around 100 MeV. The method is then used for quantitative analysis of twist 4 contributions, and problems related to higher twist effects determination are discussed. 30 refs, 4 figs, 3 tabs.

23861 **(IC—86/132) Estimate of σ-> axions decay rate.** Dao Vong Duc; Nguyen Thi Hong. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701415.

The σ-> axions decay rate is estimated under some general assumptions in considering the matrix elements of the trace θ/sub μ//sup μ/ of the improved energy-momentum tensor between axion and π - meson states. The approximate relation Γ(σ->αα)/Γ(σ->ππ) — (m/sub α//m/sub π/)/sup 4/ is obtained. 11 refs.

23862 **(IFVE-OTF—85-123) Amplitude of hadron-hadron elastic interaction in a model with σsub(el)/σsub(tot) -> 1 at superhigh energies.** Vall, A.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701417.

The limiting transition at S -> infinity has been stidied in the hadron elastic scattering amplitude model, based on the exixtence of the multiple vacuum pole in the t-channel decomposition of the generalized reaction matrix. The amplitude within this limit is shown to be an interference sum, whose first term describes absolutely elastic scattering and the other terms describe quantum fluctuations of the hadron simulating drop surface. These fluctuations result in elastic channeling effect. Its interference with the contribution from the first term is a physical reason for dip in the differential cross-section in the model. 14 refs.

23863 **(INIS-mf—10328) Hadrons in two-dimensional quantum chromodynamics: Construction and study of bound states by means of perturbative and non-perturbative methods.** Zeppenfeld, D. (Muenchen Univ. (Germany, F.R.). Fakultaet fuer Physik). 27 Jul 1984. 88p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87751194.

The present thesis deals with the construction and the analysis of mesonic bound states in SU(N) gauge theories in a two-dimensional space-time. The based field theory can thereby be considered as a simplified version of the QCD, the theory of the strong interactions. After an extensive discussion of the quantization in the temporal gauge and after the Poincare invariance of the theory has been shown mesonic bound states and the meson spectrum for different ranges of the free parameters of the theory (quark mass, coupling constant, and index N of the gauge group) are treated. The spectrum is given by a boundary value problem which in the perturbative limit is solved analytically. For massless quarks gauge-invariant annihilation operators are constructed which permit an exact solution of the energy eigenvalue equation. The energy eigenstates so found described massive interacting mesons which are surrounded by a cloud of massless free particles.

In Problems of nuclear physics and cosmic rays. No. 23. Republican Interinstitute scientific technical collection.

The general structure of the P-odd differential cross section of neutron-proton collisions, n+p->d+e/sup +/+e/sup -/, has been established. This cross section is caused by the interference of the P-even one photon amplitude which corresponds to be neutral Z-boson exchange. The dependence of P-odd contributions on colliding particle polarizations has been described in terms of structure functions. The P-odd effects with appear in unpolarized particle collisions essentially depend on the np-interaction and disappear in the impulse approximation (at M/sup 2/<=9msub(π)sup(2), M and msub(π) - are the e/sup +/e/sup -/- and pion masses. 11 refs.

23878 (INIS-SU—399, pp 3-5) **Potential model for heavy and light mesons.** Efrosinin, V.P. (AN SSSR, Moscow. Inst. Yadernykh Issledovanij). 1986. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87780091.

Kratkie Soobshcheniya po Fizike.; No. 4.

In Experimental and theoretical physics. Collection.

Dependence of potential on quark reduced mass is studied for light and heavy mesons (p,π,k/sup +/,kphi,PSI, and γ) with provision for phenomenological regularities. Masses of quark components are calculated. Some results on excited s-states of light mesons are obtained. It is shown that rho'(1250) and rho'(1600) represent the first and the second π-meson excited states. π''(1.6) meson should exist. L(1440) is the eta-meson first excited state. 12 refs.; 1 tab.

Kratkie Soobshcheniya po Fizike.; No. 4.

In Experimental and theoretical data. Collection.

The model, which describes a behaviour of a s-wave πN-amplitude with one pion beyond the mass-shell, is suggested using in calculations cross sections of p+p -> d+π/sup +/ and p+p -> p+p+π/sup 0/ reactions near by a threshold. The model describes satisfactory p+p -> p+p+π/sup 0/ reaction near by a threshold. To describe threshold production of pions in p+p -> π/sup +/+d reaction it is necessary to take into account small components of a deuteron relativistic wave function. 14 refs.; 2 tabs.

23880 (INP—1202/PH) **Kaon cloud contribution to the magnetic moments of the nucleon octet.** Zenczykowski, P. (Institute of Nuclear Physics, Krakow (Poland)). 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701576.

Published in 1983.

Kaon cloud contribution to the magnetic moments of the nucleon octet is evaluated in the framework of the cloudy bag model. Although the kaonic effects are significant, we find only minor deviations from previously calculated values of magnetic moments. In particular the relative values of μ/sub γ//sup -/ and μ/sub Λ/ cannot be explained with the help of the kaon cloud. This feature is expected to hold in any additive (at the "bare" baryon level) and SU(6) symmetric model in which pion and kaon cloud effects can be treated perturbatively.

23881 (JINR—E-2-85-739) **Calculation of the static interquark potential in the string model in the time-like gauge.** Nestevenko, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701418.

Submitted to the journal Teor. Mat. Fiz. .

Quantum theory of the relativistic string with fixed ends is constructed in the time-like gauge. The gauge conditions are introduced in the reparametrization-invariant action of the string. In the theory there are no tachyon states and constraints on the dimension of space-time. The constraints and gauge conditions are fulfild in quantum theory only as the matrix elements with respect to physical state vectors. The string generates the static interquark potential V(R)=$\sqrt{\gamma}$/sup 2/R/sup 2/+epsilon/sub 0/, where epsilon/sub 0/ is free parameter determined in the experiment. 23 refs.

From 3. international symposium on selected topics in statistical mechanics; Dubna, USSR (22 Aug 1984).

The purpose of the paper is the exposition of the last results of a program of research on nonlinear spinors, aiming at the development of extended elementary particle models, as finite energy solitary waves or eventually solitons, generally called particle-like solutions (PLS). The most characteristic features of this attempt are the systematic use of c-number classical solutions and the description of the forces between the particles by nonlinear direct couplings, without intermediate carriers of any kind. A relativistic and nonrelativistic direct coupling models of quarks in one-space dimension are reviewed. The properties of the field equations, baryon-like and meson-like solutions for it are considered. The main conclusion is that direct coupling quark models offer a very interesting tool, which might provide with an alternative approach to the more popular theories currently accepted. Its development requires the extension to three space dimensions of the theory of solitons, a major goal, with could allow the construction of a coherent theory of extended particles with confined constituents in the future. In that case, the theory of solitons would find a most stimulating application.

23886 **(KFKI—1986-64/A) Inclusive reactions in the quasi-nuclear quark model: numerical results for hadron-hadron collisions.** Kobrinskij, M.N.; Melikhov, D.I. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Sep 1986. 37p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701420.

The numerical results obtained in the framework of the quasi-nuclear quark model for multiple hadron production processes are summarized and tabulated. A brief summary of notations and of the theory of non-diffractive inelastic baryon-nucleon and meson-nucleon collisions is given. The tables contain the calculated state decomposition coefficients in the cases of different beam hadrons and different tagged quarks. The computer calculated particle spectra for different types of projectile particles are also tabulated. The tables presented can be directly used for evaluation of experimental results. (D.Gy.). 16 refs.; 15 tables.

23887 **(NBI-HE—86-33) Static potential in a string model with extrinsic curvatures.** Olesen, P.; Yang Sungkil. (Niels Bohr Inst., Copenhagen (Denmark)). Aug 1986. 34p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751351.

The static quark potential in a string model including extrinsic curvature effects is studied in the large d limit, where d is the dimensionality of euclidean space. At large distances it is explicitly shown that the physical string tension is dynamically generated. Examining the large-distance "Coulomb" term in the potential, we show that the non-perturbative effects in general generate non-gaussian effective theories in the infrared regime. At large distances the d->∞ saddle point is stable for a large range of parameters.

23888 **(OUP—86-20) Experimental heavy quarkonium physics. Introduction and survey.** Bugge, L. (Oslo Univ. (Norway). Fysisk Inst.). Aug 1986. 127p. NTIS (US Sales Only), PC A07/MF A01. File Number DE87750682.

Following some brief arguments on why heavy quarkonium spectroscopy is an important field of particle physics, some points on experimental techniques are discussed. Parts of the basic quarkonium phenomenology, including discussions of various items related to potensial models, are then presented. An up-to-date presentation is given of the state-of-the-art of experimental charmonium and bottomonium spectroscopy below open flavour threshold, including the confrontation of experimental results to representative theoretical predictions. Updated version of lectures presented at the Trondheim 1984 Workshop in theoretical physics. 159 refs.

23889 **(OUP—86-23) ΔI=1/2 rule for K->phiphi decays.** Eeg, J.O. (Oslo Univ. (Norway). Fysisk Inst.). Oct 1986. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87750894.

Attempts to explain the ΔI=1/2 rule in K->phi phi decays are discussed. The standard effective Hamiltonian approach to nonleptonic decays is shortly reviewed. Recent long distance approaches, some of which give encouraging results, are described. It is concluded that long distance approaches to the penguin diagram improve the understanding of the ΔI=1/2 rule. 44 refs.

23890 **(SLAC—308) Toponium-Z^0 interference and phenomenology of an extra Z^0 in e^+e^- collisions.** Franzini, P.J. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jan 1987. Contract AC03-76SF00515. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006304.

A qualitative discussion of toponium-Z^0 interference is followed by a brief discussion of heavy quark potentials and the spectrum of toponium states which results. The results of the toponium spectra and the mixing formalism are then used to find the cross sections and asymmetries for toponium near the Z. The phenomenology of two-Higgs models and the bounds imposed on them by their effects on neutral B meson mixing are discussed, followed by the effects an extra Higgs doublet may have on toponium-Z^0 interference. The topic then turns to phenomenology of an extra Z^0 in electron-positron collisions. Models under consideration are reviewed, and the existing limits on such models are considered. What can be learned by electron-positron annihilation measurements at the Z peak without polarized beams is discussed, as well as further restrictions that can be made with polarized beams. The potential for experiments in the energy region above the Z is discussed. 57 refs. (LEW)

23891 **(SLAC-PUB—4165) Small multiplicity events in $e^+ + e^- \rightarrow Z^0$ and unconventional phenomena.** Perl, M.L. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Dec 1986. Contract AC03-76SF00515. 21p. (CONF-870390—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006777.

From 22. Recontres de Moriond: electroweak interactions and unified theories conference; Les Arcs, France (8 Mar 1987).

Events with two-, four- or six-charged particles and no photons produced through the process $e^+ + e^- \rightarrow Z^0$ provide an opportunity to search for unconventional phenomena at the SLC and LEP electron-positron colliders. Examples of unconventional proc-

esses are compared with the expected background from electromagnetic processes and from charged lepton pair production.

23892 **(UWThPh—1986-33) Decay π/sup 0/ -> e/sup +/e/sup -/ and two-photon processes.** Neufeld, H.; Pietschmann, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701603.

Motivated by the discrepancy between theoretical predictions and present experimental data for the branching ratio of π/sup 0/ -> e/sup +/e/sup -/ we propose a measurement of the electromagnetic pion form factor through the two-photon process e/sup +/e/sup -/ -> e/sup +/e/sup -/π/sup 0/.

23893 **(UWThPh—1986-37) Progress in our notion of mass.** Pietschmann, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701605.

The development of our concepts of quantum field theory especially in the version of local gauge theories has brought about a tremendous success in predicting and explaining experimental facts. As a side-effect, our understanding of the notion of mass has undergone dramatic changes. Since this is not accompanied by a change in experimental predictions or empirical notions, it is progress in a field which might be considered on the borderline of physics and philosophy of nature.

23894 **(UWThPh—1986-44) Leptonic and hadronic decay rates of winos.** Kizukuri Yoshiki; Oshimo Noriyuki. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701610.

We show that, in wide classes of supergravity models, the ratio of the leptonic and hadronic decay widths of winos is very different from that of heavy leptons which decay via the standard weak interaction. For example, it becomes 20% in one case and 70% in another case, while it will be 36% in case of heavy leptons. The production of wino pairs in next e/sup +/e/sup -/ experiments will be tested by the ratio of leptonic and hadronic final states.

23895 **Explicit formulae for heavy flavour production.** Ellis, R.K.; Sexton, J.C. (Fermi National Accelerator Lab., Batavia, IL, USA). *Nuclear Physics [Section] B;* **282**: No. 3/4, 642-652(2 Mar 1987).

Explicit formulae are given in QCD for the processes which contribute to the hadroproduction of heavy quarks Q. The processes considered are (1) q + anti q -> Q + anti Q, (2) g + g -> Q + anti Q, (3) Q + anti Q -> q + anti q + g, (4) Q + anti Q -> g + g + g. All mass effects are included. A comparison of the exact matrix elements with the results of the leading pole and soft gluon approximation is made.

23896 **Classical dynamics of strings with rigidity.** Curtright, T.L.; Ghandour, G.I.; Zachos, C.K. (Department of Physics, University of Florida, Gainesville, Florida 32611). *Physical Review [Section] D: Particles and Fields;* **34**: No. 12, 3811-3823(15 Dec 1986).

We explore the classical dynamics of strings with rigidity, i.e., with terms added to the string action which depend on the extrinsic curvature of the world sheet. We study classical solutions of the string equations of motion using both analytical and numerical methods, and we determine the leading Regge trajectories $J(E^2)$ for a set of classical rotating string configurations. We observe that for open strings the dominant classical solutions are identical to those for the conventional Nambu string, and correspondingly give linear trajectories. However, for closed strings we find new solutions that include finite-energy, static configurations, and that give trajectories which are nonlinear as the lowest-energy solution is approached, but become linear asymptotically as $J(E^2)\rightarrow\infty$.

23897 **Perturbative QCD analysis of exclusive pair production of higher-generation nucleons.** Ji, C.; Sill, A.F. (Department of Physics, Stanford University and Stanford Linear Accelerator Center, Stanford, California 94305). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3350-3353(1 Dec 1986). Contract AC03-76SF00515.

Results are presented of a perturbative QCD analysis of heavy-baryon form factors to leading order in α/sub s/ including all higher-twist quark-mass effects. A dip in the total cross section for the e^+e^- pair production of some higher-generation nucleons is predicted. The results are consistent with the definition of charge form factors at zero momentum transfer and reproduce the well-known anomalous magnetic moments of nucleons. These considerations resolve a sign ambiguity in previous leading-twist analyses of the hard-scattering contribution to the proton magnetic form factor.

23898 **Hyperphoton production in W-boson decay.** Rizzo, T.G. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3519-3520(1 Dec 1986). Contract W-7405-ENG-82.

We calculate the rate and energy distribution for hyperphoton (γ') production in W-boson decay via the process $W\rightarrow u+\bar{s}+\gamma'$. We show that the width for this decay mode is $\simeq$0.36 MeV and that the signal for such decays: two jets plus missing energy ($\simeq$20 GeV): is quite distinct.

23899 **Inelastic photoproduction of charged vector bosons.** Dicus, D.A.; Kallianpur, K.J. (Center for Particle Theory, University of Texas, Austin, Texas 78712). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3533-3535(1 Dec 1986).

A proposal for a photon beam at the Superconducting Super Collider makes Mikaelian's paper on photoproduction of charged vector bosons of current interest. We update that paper to include modern values of the parameters, modern distribution functions, and an electric quadrupole coupling in the three-gauge-boson vertex. The cross section remains large enough that a substantial number of W/sup +- / could be produced. The prospects for determining the three-gauge-boson coupling, however, are not good.

23900 **E^+e^- peaks at 1.8 MeV: Phenomenological constraints on nuclear transitions, axions, and the particle interpretation.** Krauss, L.M.; Zeller, M. (Department of Physics, Yale University, New Haven, Connecticut 06511). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3385-3393(1 Dec 1986).

We investigate phenomenological constraints on a variety of possible explanations of the e^+e^- peaks observed by the EPOS Collaboration at GSI. We first review problems with a variety of proposed nuclear-related production mechanisms. Next we investigate constraints on the axion interpretation of the observed events. New non-accelerator-related constraints come from considerations of shifts in the hyperfine splitting in positronium, and an analysis of the decays $K\rightarrow\pi e^+e^-$ and $\pi\rightarrow e^+e^-e^+\nu$, which are relevant for a proposed short-lived axion variant. We then demonstrate that present and past beam-dump experiments are, in a model-independent way, sensitive to a new 1.8-MeV particle coupling to electrons. Our estimates suggest that if the particle does not interact in the target one should see very high event rates for all allowed lifetimes from 10/sup -14/—10/sup -10/ sec at high-energy facilities and lifetimes greater than 10/sup -10/ sec at low-energy dumps.

23901 **On muon decay in left-right-symmetric electroweak models.** Herczeg, P. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3449-3456(1 Dec 1986).

We investigate the implications of a recent measurement of the positron-momentum-spectrum end point in polarized muon decay for general SU(2)/sub L/ x SU(2)/sub R/ x U(1) electroweak models.

23902 **Modifications in neutrino counting due to additional gauge bosons.** Rizzo, T.G. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3516-3518(1 Dec 1986). Contract W-7405-ENG-82.

We examine the possible influence of additional heavy neutral gauge bosons (Z_1^0) on attempts at neutrino counting in e^+e^- annihilation below the Z_1^0 (≅93 GeV) resonance. A large class of two-Z^0-boson models is examined. We find that the apparent shift in the number of neutrinos, N/sub ν/, due to the extra Z^0 boson in these models is never larger than ≅0.4 if N/sub ν/ = 3 and somewhat smaller if N/sub ν/ = 4. Thus we should not expect a large "error" in neutrino counting to result in these extensions of the standard model.

23903 **Ma responds.** Ma, E. (Department of Physics and Astronomy, University of Hawaii at Manoa, Honolulu, Hawaii 96822). *Physical Review Letters;* **57**: No. 22, 2871-2871(1 Dec 1986).

The coupling of the Z boson is considered in terms of a postulated quark model. (AIP)

23904 **Systematic study of large CP violations in decays of neutral b-flavored mesons.** Du, D.; Dunietz, I.; Wu, D. (Institute for Advanced Study, Princeton, New Jersey 08540). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3414-3427(1 Dec 1986).

CP-violation effects in partial-decay-rate asymmetries of B/sub d/^{0} and B/sub s/^{0} systems are examined within the framework of the Kobayashi-Maskawa model. We concentrate on those hadronic final states into which both B^0 and B-bar ^{0} can decay. The rephasing-invariant formalism is used in our calculation. We find a quite large asymmetry (—0.6) in some decay modes, such as B/sub d/^{0}→$D^+\pi^-$, B/sub s/^{0}→$D^+\pi^-$, D^0phi, etc., but we still need 10^6—10^7 bb-bar pairs for testing these effects for 3σ signature. In addition, the contribution of the penguin diagrams and the problem of strong-interaction phases of final states are also briefly discussed. We find that for testing CP violations with only the penguin contribution the best decays are B/sub d/^{0}→phiK/sub S/, B/sub s/^{0}→phiK/sub S/, which need, for 3σ signature, 3 x 10^8 bb-bar pairs.

23905 **Searching for possible large CP-violation effects in neutral-charm-meson decays.** Du, D. (The Institute for Advanced Study, Princeton, New Jersey 08540). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3428-3433(1 Dec 1986).

Possible large CP-violation effects in the partial-decay-rate asymmetries for the D^0-D-bar ^{0} system are discussed. All possible nonleptonic two-body final states are studied. It turns out that D^0→π^-K^+, π^0K^0, π^0eta, $\pi^0\omega$, K^+K^-, phiK^0 are the most promising channels. If the D^0-D-bar ^{0} mixing is on —1% level, 10^4—10^6 D^0D-bar ^{0} pairs would be enough for testing these channels.

23906 **Explicit mass formulas for heavy mesons and baryons.** Pagnamenta, A.; Sukhatme, U. (Department of Physics, University of Illinois at Chicago, Chicago, Illinois 60680). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3528-3529(1 Dec 1986).

Applying the recently developed shifted large-N expansion technique to the Schroedinger equation with the Martin power-law interquark potential, we obtain simple mass formulas for mesonic and baryonic states composed of heavy quarks (s,c,b,. . .).

23907 **Exact calculation of ff→ffWW for the charged-current sector and comparison with the effective-W approximation.** Gunion, J.F.; Kalinowski, J.; Tofighi-Niaki, A. (Department of Physics, University of California, Davis, Davis California 95616). *Physical Review Letters;* **57**: No. 19, 2351-2354(10 Nov 1986).

We have computed the complete set of amplitudes for fermion + fermion into fermion + fermion + $W^+ + W^-$ for all possible fermion types. We use these results to analyze the phenomenology of the WW scattering sector and to compare to the effective-W approximation.

23908 **Production of glueballs.** Lindenbaum, S.J. (Brookhaven National Lab., Upton, NY). *Comments on Nuclear and Particle Physics;* **13**: No. 6, 285-311(1984). Contract AC02-76CH00016;AC02-83ER40107.

This Comment discusses the evidence for production of glueball states. The BNL CCNY g/sub T/ (2120), g/sub T/ (2220), and g/sub T/ (2360) produced in the reaction $\pi^- p \rightarrow$ phi phi n are shown to be produced by 1-3 glueballs if (1) QCD is correct, and (2) the OZI (or Zweig) rule is universal. Other glueball candidates such as the iota (1440) and Theta (1640) are discussed. 39 references, 16 figures.

23909 **(IC—86/153) On the exceptional Lie algebras E/sub 6/ and E/sub 8/.** Nguyen van Hieu; Nguyen Hung Son. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701522.

The exceptional Lie algebras E/sub 6/ and E/sub 8/ are realized in terms of the operators transformed covariantly under the subalgebra SO(10). The commutation relations are given explicitly. 3 refs.

23910 **(IC—86/189) Multiplets of Verma modules over the osp(2,2)/sup (1)/ super Kac-Moody algebra.** Dobrev, V.K. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701534.

The reducible Verma modules over the super Kac-Moody algebra osp(2,2)/sup (1)/ are studied. The Verma modules with unitarizable integral highest weights and those with singular weights (that is with central charge equal to minus the dual coxeter number) are completely classified and parametrized. The idea to extend the Weyl-Kac group as proposed earlier for affine Lie algebras and finite-dimensional superalgebras is discussed. 22 refs.

23911 **(NBI-HE—86-29) N=2 superconformal invariance in two-dimensional quantum field theories.** Yu Ming; Zheng Haibin. (Niels Bohr Inst., Copenhagen (Denmark)). Jul 1986. 40p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751349.

We construct N=2 superconformal current and vertex operators using chiral superfields. Then we present a derivation of the N=2 superconformal dimensions of the degenerate representations by generalizing Thorn's method and Feigin and Fuchs' construction of Dotsenko and Fateev. Finally, unitary representations of the N=2 algebra in the twisted sector are constructed out of free fermions. (orig./HSI).

23912 **(NBI-HE—86-34) N=2 superconformal theories.** Petersen, J.L. (Niels Bohr Inst., Copenhagen (Denmark)). 1986. 14p. (CONF-8606226—2). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751350.

From Symposium on topological and geometrical methods in field theory; Espoo, Finland (8 Jun 1986).

In this talk I shall describe recent results obtained by our group in Copenhagen on degenerate and unitary representations of the N=2 algebra. (orig./HSI).

23913 **(UWThPh—1986-39) Supersymmetric quantum mechanics defined as sesquilinear forms.** Pittner, L.; Grosse, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 34p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701606.

A formulation of supersymmetric quantum mechanics in terms of sesquilinear forms is presented. Otherwise occurring rather complicated domain questions are solved in a simple and natural way. We formulate the axioms and describe a number of models. Supersymmetry transformations are implemented as superunitary transformations in a space defined over a Grassmann algebra; gen-

eralized Bogoliubov transformations acting in that space are formulated too.

23914 (CONF-860766—2) Supermanifolds and super Riemann surfaces. Rabin, J.M. (Chicago Univ., IL (USA)). Sep 1986. Contract AC02-82ER40073. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004578.

From Nato advanced research workshop on super field theories; Vancouver, Canada (25 Jul 1986).

The theory of super Riemann surfaces is rigorously developed using Rogers' theory of supermanifolds. The global structures of super Teichmueller space and super moduli space are determined. The super modular group is shown to be precisely the ordinary modular group. Super moduli space is shown to be the gauge-fixing slice for the fermionic string path integral.

23915 (DOE/ER/40272—23) Strings in spring (86). Ramond, P. (Florida Univ., Gainesville (USA). Dept. of Physics). 15 May 1986. Contract FG05-86ER40272. 25p. (UFTP—86-23; CONF-8605182—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005677.

From 7. Vanderbilt high energy physics conference; Nashville, TN, USA (15 May 1986).

We present an overview of recent progress in string theory. We treat in detail the mechanics of some of the Calabi-Yau compactification and summarize some of its experimental consequences.

23916 (IC—86/262) Conformally covariant coupled non-linear field theory on the hypercone: Vacuum solutions and quantization of normal modes. Aciktepe, T.; Akdeniz, K.G.; Barut, A.O.; Kalayci, J. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701557.

For the conformally covariant coupled non-linear spinor-scalar fields of the σ-model type we show that the non-trivial vacuum instanton solutions have a geometric meaning as constant spinors on the five-dimensional hypercone. The quantized fields around these solutions correspond to the normal modes of the hypercone. A connection is thus established between field theory, particle spectrum of the fields and quantized excitations of a geometry (the hypercone). 10 refs.

23917 (INIS-mf—10330) Boson-fermion duality in four dimensions: Comments on the paper by Luther and Schotte. Garbaczewsky, P. (Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS)). Sep 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751187.

BiBoS.; No. 98.

Fock space for the fermion field can be identified with this for the boson field, provided the overall numbers of internal degrees of freedom are the same. As a consequence the respective free field Hamiltonian systems are equivalent (dual): the four component neutrino model is thus equivalent to the doublet of independent ('electric' and 'magnetic' respectively) Maxwell fields which are quantized in the manifest Coulomb gauge. This statement arises on the continuum field theory level and seems to falsify the claim that realistic photons can be constructed from (bound) pairs of neutrinos. The more correct claim in this framework is that each (anti)neutrino degree of freedom represents and is represented by the photon type ('electric' and 'magnetic' respectively) degree of freedom. By repeating the classic Weinberg's construction we can rewrite the common for both models Hamiltonian in two equivalent ways: in terms of a relativistic spin 1/2, m=0 field or in terms of the spin 1, m=0 doublet of four-potentials. One of them is the standard Maxwell ('electric') potential while the other has all symmetry properties of the dual ('magnetic') one.

23918 (INIS-SU—401, pp 33-36) Two-point correlation functions in stochastic nonholonomic quantum field theory. Zubko, A.V.; Maliev, I.N. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780111.

Kratkie Soobshcheniya po Fizike.; No. 1.

In Experimental and theoretical physics. Collection.

Introduction of nonholonomic gauge conditions results in nontransversality of polarization operator. It's consequences are discussed. It is shown that double correlator of intensities of the gauge field is not gauge invariant as in standard quantum theory.

23919 (LA-UR—87-634) Towards an analytic solution of QCD: The glueball mass gap. West, G.B. (Los Alamos National Lab., NM (USA)). Jan 1987. Contract W-7405-ENG-36. 16p. (CONF-870151—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006061.

From Irvine conference on non-perturbative methods in field theory; Laguna Beach, CA, USA (7 Jan 1987).

Certain general features and beliefs concerning quantum chromodynamics are reviewed with he view to seeing whether the theory sense and whether its physical spectrum can be determined. A typical Green's function is represented as an expansion around the minima of the action, each term of which is divergent and requires renormalization. It is shown that even after renormalization, each of the series generated by expansion around a minimum is divergent and requires a summability procedure to make sense. The causality and analyticity of the resulting Green's function is then discussed. The ideas thus developed are shown to determine the position of the first singularity of the Green's function. (LEW)

23920 (LBL—22796) Old physics, new physics and colliders. Hinchliffe, I. (Lawrence Berkeley Lab., CA (USA)). 14 Jan 1987. Contract AC03-76SF00098. 58p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87006249.

Some topics in the standard model of strong and electroweak interactions are discussed, pointing out some problems in this model and indicating how these problems are attacked in some theoretical models. A discussion of radiative corrections in the Glashow-Weinberg-Salam model is given that stresses how these corrections may be measured at LEP and the SLC. Some features of QCD are discussed which are relevant to hadron colliders. In discussing the unsolved problems of the standard model, some aspects of models in which quarks and leptons are composite particles are considered. 85 refs., 44 figs. (LEW)

23921 (NBI-HE—86-12) Appearance of critical dimensions in regulated string theories. Pt. 2. Ambjoern, J.; Durhuus, B.; Froehlich, J. (Niels Bohr Inst., Copenhagen (Denmark)). Apr 1986. 44p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751239.

We supply numerical evidence for the existence of critical dimensions dsub(c/sub 1/) and dsub(c/sub 2/) in a gaussian model of a discretized string, between which the mean number of vertices in the world sheet diverges, and hence a continuum limit may exist. We also discuss the possibility of non-trivial continuum limits. In particular, by introducing an additional parameter into the model, we argue that non-trivial continuum limits can possibly be obtained only between two critical dimensions d/sub 0/' and d/sub 0/. Furthermore, we give proofs of some lower bounds on determinants of combinatorial Laplacians entering the models, which were announced in a previous paper.

23922 (NBI-HE—86-14) Non-perturbative study of regularized bosonic string amplitudes. Orland, P. (Niels Bohr Inst., Copenhagen (Denmark)). Apr 1986. 52p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751238.

The Wick-rotated, light-cone gauge U(N) Veneziano model of open and closed strings is examined in the limit as N->∞, with g/sup 0//sub 2/N fixed. The amplitudes in both the "Pomeron sector" (whose graphs are cylinders with holes punched out) and the "Reggeon sector" (whose graphs are rectangles with holes punched out) are regularized using the lattice method of Giles and Thorn, as well as an alternative method. It is not possible to obtain Lorentz covariance as the cut-off is removed, unless g/sup 0//sub 2/N is taken to zero. When this is done, the Pomeron and Reggeon

sector spectra are those of the free closed and open strings, respectively. The possible implications for superstrings as well as for large N gauge theories are briefly discussed.

23923 **(NBI-HE—86-28) Random dynamics.** Bennett, D.L.; Brene, N.; Nielsen, H.B. (Niels Bohr Inst., Copenhagen (Denmark)). Jun 1986. 27p. (CONF-8606233—3). NTIS (US Sales Only), PC A03/MF A01. File Number DE87751352.

From 2. nobel symposium on elementary particle physics; Marstrand, Sweden (2 Jun 1986).

The goal of random dynamics is the derivation of the laws of nature as we know them (standard model) from inessential assumptions. The inessential assumptions made here are expressed as sets of general models at extremely high energies: gauge glass and spacetime foam. Both sets of models lead tentatively to the standard model.

23924 **(NORDITA—85/30-Prepr.) Mesons in the Eguchi Kawai model.** Haan, O. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). Sep 1985. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751241.

Fermions in the fundamental representation of the SU(N) gauge group are incorporated into the Eguchi Kawai reduction scheme. The proof for the equivalence of reduced and extended theories is given. This equivalence can be used, to calculate chiral condensate and meson propagators from the fermion matrix of a partially reduced TEK model.

23925 **(SLAC-PUB—4168) Superstring spectroscopy.** Peskin, M.E. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Dec 1986. Contract AC03-76SF00515. 22p. (CONF-860736—9). NTIS, PC A02. File Number DE87005931.

From SLAC summer institute on particle physics; Stanford, CA, USA (29 Jul 1986).

The basic elements of string theory are presented after a brief review of the main properties of string theories, particularly the supersymmetric version. Lessons are provided on the basic quantized string, zero-point energy, the bosonic string, compactification on a torus, the superstring, the heterotic string, field compactification on an orbifold, and string compactification on an orbifold. 35 refs., 17 figs. (LEW)

23926 **(UWThPh—1986-30) Connections on Clifford bundles and the Dirac operator.** Blau, M. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701601.

It is shown, how - in the setting of Clifford bundles - the spin connection (or Dirac operator) may be obtained by averaging the Levi-Civita connection (or Kaehler-Dirac operator) over the finite group generated by an orthonormal frame of the base-manifold. The familiar covariance of the Dirac equation under a simultaneous transformation of spinors and matrix-representations emerges very naturally in this scheme, which can also be applied when the manifold does not possess a spin-structure.

23927 **(UWThPh—1986-32) Stochastic quantization of gauge, gravitational and string fields.** Rumpf, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701602.

The stochastic quantization method of Parisi and Wu and its application to gauge fields are briefly reviewed. The method is then generalized so as to make it applicable to Einstein gravity. The generalization is based on the existence of a preferred metric in field configuration space and involves Ito's calculus. In the nonlinear case the indefiniteness of the Euclidean Einstein action necessitates to generalize the stochastic formalism further to Lorentzian spacetimes. The formalism is shown to imply the path integral measure of De Witt, a causal Feynman propagator, and a consistent stochastic perturbation theory. Finally it is shown how stochastic quantization resolves the indefiniteness problem in free bosonic string field theory.

23928 **(UWThPh—1986-34) Fractional charges in external field problems and the inverse scattering method.** Grosse, H.; Opelt, G. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701604.

Motivated by recent studies of the quantization of fermions interacting with external soliton fields, we construct all reflectionless potentials for the one-dimensional Dirac operator, which are solitons of coupled MKdV equations. The charge of the fermion field in presence of these solitons varies continuously. For the N-soliton solutions it becomes the sum of the charges of the individual problems. The questions of unitary equivalence of representations of the CAR as well as the implementability of gauge transformations are studied for specific examples.

23929 **Monopoles in topologically massive gauge theories.** Pisarski, R.D. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510). *Physical Review [Section] D: Particles and Fields;* **34**: No. 12, 3851-3857(15 Dec 1986).

In the presence of a Chern-Simons term, a single Dirac monopole induces a current that extends throughout space-time. The Dirac string acquires a constant charge per unit length, which should confine monopoles and antimonopoles by a linear potential. The monopole of 't Hooft and Polyakov is generalized to include a Chern-Simons term for the gauge field, and the string tension for these monopoles is calculated.

23930 **Solving momentum-space integral equations for quarkonia spectra with confining potentials.** Eyre, D.; Vary, J.P. (Theoretical Physics Division, National Research Institute for Mathematical Sciences of the Council of Scientific and Industrial Research, P.O. Box 395, Pretoria 0001, Republic of South Africa). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3467-3471(1 Dec 1986).

Singular integral equations for quarkonia (qq-bar) spectra are solved in momentum space for different choices of confining potentials by introducing a regularization procedure. The method is sufficiently general to treat nonlocal potentials and combinations of singular potentials. Through nonrelativistic model applications we demonstrate the stability and accuracy of the method. The method works in all partial waves. A first-order correction to the eigenenergies brings calculated results for soluble model problems into remarkable agreement with exact results. Extensions of the method to solve the nonrelativistic spectra of three-quark systems and to solve the relativistic Bethe-Salpeter equation are discussed.

23931 **Scaling of the 0sup++ glueball mass in SU(N) Hamiltonian lattice calculations.** Chin, S.A.; Long, C.; Robson, D. (Department of Physics, Texas A&M University, College Station, Texas 77840). *Physical Review Letters;* **57**: No. 22, 2779-2782(1 Dec 1986).

We show that a variational calculation of the ground-state energy of SU(N) Hamiltonian lattice gauge theories concurrently gives an estimate of the 0/sup ++/ glueball mass. Monte Carlo calculations in three spatial dimension for $N = 3, 4, 5$, and 6 indicate that the resulting glueball mass begins to scale for $N \geq 5$.

23932 **Two-phase model and the Johnson vacuum in one dimension.** Zahed, I.; Klabucar, D. (Massachusetts Institute of Technology, Cambridge). *Physical Review [Section] D: Particles and Fields;* **30**: No. 12, 2647-2652(15 Dec 1984). Contract AC02-76ER03069.

The authors discuss the relevant vacuum fluctuations in a two-phase model of the light baryons, in one dimension. It is shown that the limiting procedure in which the quark phase is shrunk to zero size is problematic within a naive chiral bag formulation. To circumvent these difficulties, a cutoff-dependent chiral bag model is constructed, using Johnson's description of the vacuum state in two-dimensional QCD. The resulting picture is shown to interpolate continuously between bagged QCD_2 and a sine-Gordon model. Pertinent conclusions for three dimensions are sketched. 8 references, 5 figures.

23933 **Geometry and physics of Wess-Zumino supergravity.** Xizeng Wu. (Massachusetts Institute of Technology, Cambridge). *Physical Review [Section] D: Particles and Fields;* 30: No. 12, 2462-2473(15 Dec 1984). Contract AC02-76ER03069.

It is shown that the Kaehler manifold of Wess-Zumino supergravity is the noncompact coset space SU(N,1)/[SU(N) x U(1)] and the Kaehler metric is an Einstein metric. The mass sum rule turns out to be the same as that in global supersymmetry. This mass sum rule makes it possible to have supersymmetry (SUSY)-breaking and vanishing scalar potential. Effective theories with or without the grand-unified-theory (GUT) sector are derived from the Wess-Zumino supergravity. They do not have scalar mass terms and trilinear terms among the soft SUSY-breaking terms. Their relevance to the gravitino mass problem is suggested. In a simple SU(5) SUSY GUT model they also show how the scalar partners of quarks and leptons and gauginos get their masses radiatively. The stability problem of the gauge hierarchy is also discussed. 21 references, 12 figures.

23938 **(ITEF—59(1985)) Measurement of total inelastic cross sections of proton and π/sup +/-meson interaction with nuclei in the momentum range from 1.35 to 3.75 GeV/c.** Gachurin, V.V.; Druzhinin, B.L.; Ezhov, B.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701437.

Total cross sections of inelastic proton and π/sup +/-meson interactions with sup(6, 7)Li, /sup 9/Be, /sup 12/C, /sup 27/Al, /sup 65/Zn, /sup 181/Ta, /sup 207/Pb, /sup 209/Bi, /sup 238/U nuclei in the 1.35-3.75 GeV/c momentum range of incident particles are measured. Measurements were carried out with targets of different thickness. The results are tabulated and presented as diagrams. Absolute error of measurements makes up +-4%, relative one is +-2%. No irregularities in the energy dependence of cross section either on light or on heavy nuclei are observed within the limit of accuracy of conducted measurements. Cross section of nucleus interaction with a proton is approximately 10% larger than that of nucleus ifteraction with a pion. Measured cross sections are approximately 5% lower than those obtained by other authors under similar conditions. 7 refs.; 4 figs.; 2 tabs.

23939 **(UCID—18987-87) Report to the DOE Nuclear Data Committee 1987.** Lanier, R.G.; White, R.G. (Lawrence Livermore National Lab., CA (USA)). Feb 1987. Contract W-7405-ENG-48. 15p. NTIS, PC A02. File Number DE87006601.

Both measurements and calculations in the field of nuclear data applications are reported. New measurements include the discovery of two new Lr isotopes, the energy-level structure of Mo-93, a probe of the shell crossing at A = 40 via beta decay (experiment and theory), proton and neutron transition densities in Li-6 and Li-7 from a comparative study of proton and neutron scattering at 24 MeV, measurement of the neutron induced fission cross section of Cm-242, quadrupole moments and spectroscopy of Po-210 with Bi-209(t,2n) reaction, excitation functions for Y-89 + p over the range 5 to 40 MeV, excitation functions for Y-89 + d over the range 3 to 40 MeV, and the nuclear structure of Th-231. New calculations reported include the gamma ray cascades in the code ALICE, low energy neutron capture of neutron rich target nuclides, exploratory (n,f) cross section calculations for the U-235 1/2+ isomer, calculated photon induced isomer production in Lu-176 and its impact on the use of Lu-176 as a stellar chronometer and/or thermometer, disagreement between measured capture gamma ray spectra and calculations, electromagnetic moments for Sr-88 and Sr-86, shell model calculations of first forbidden beta decay in the mass 40 region, and dipole strength function studies in the actinide mass region. 8 refs., 7 figs., 2 tabs. 23941 **(OUP—83-15) Fast ADC scanner for multiparameter nuclear physics experiments.** Midttun, G.; Ingebretsen, F.; Holt, K.; Skaali, B. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1983. 57p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87750898.

A fast readout system for multiparameter experiments in nuclear physics is described. The central part of the CAMAC aquisition hardware is an ADC scanner module. The scanner incorporates a new arbitration logic and direct memory access for simultaneous transfer of singles and correlated data. Together with specially designed ADC interfaces the system can be set up for any configuration of singles and multiparameter events from 1 up to 15 ADC's in one crate.

23945 **(JINR—E-1-86-78) Peculiarities of deuteron production in /sup 4/He-proton interactions.** Glagolev, V.V.; Lebedev, R.M.; Pestova, G.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701439.

Submitted to the journal Acta Phys. Slovaca.

Some features of fast deuteron production have been studied in /sup 4/He nucleus-proton collisions at 8.6 GeV/c. The experiment has been carried out by means of a 1 m hydrogen bubble chamber at the JINR. The /sup 4/Hep -> ddp and /sup 4/Hep -> dppn reactions are compared with one another and also with the results obtained from the Monte Carlo procedure based on a double scattering model. The comparison shows that a great bulk of non-spectator deuterons is formed by the coalescence mechanism via the final state ineraction. The coalescence process is of a random nature apd depends mainly on the proton and neutron relative momenta. 11 refs.

From Brasov international summer school: symmetrics and semiclassical features of nuclear dynamics; Poiana Brasov, Romania (1 Sep 1986).

The cross sections for radiative capture of α-particles, deuterons and protons by light nuclei at very low relative energies are of particular importance for the understanding of the nucleosynthesis of chemical elements and for determining the relative elemental abundances in stellar burning processes at various astrophysical sites. As example we quote the reactions α+d -> /sup 6/Li+γ, α+/sup 3/He -> /sup 7/Be+γ, or α+/sup 12/C -> /sup 16/O+γ. As an alternative to the direct experimental study of these processes we consider the inverse process, the photodisintegration, by means of the virtual photons provided by a nuclear Coulomb field: Z+a -> Z+b+c. The radiative capture process b+c -> a+γ is related to the inverse process, the photodisintegration γ+a -> b+c by the detailed balance theorem. Except for the extreme case very close to the threshold the phase space favours the photodisintegration cross section as compared to the radiative capture. The Coulomb dissociation cross section proves to be enhanced due to the large virtual photon number, seen by the passing projectile, and the kinematics of the process leads to particular advantages for studies of the interaction of the two break-up fragments at small relative energies E/sub bc/. The conditions of dedicated experimental investigations are discussed and demonstrated by recent experimental and theoretical studies of the break-up of 156 MeV /sup 6/Li projectiles. In addition, a brief review about general features of break-up processes of light ions in the field of atomic nuclei is given.

6513 Nuclear Properties And Reactions, A=6-19, Experimental

23947 **(INIS-mf—10343) Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si.** Music, M. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). Jan 1986. 93p. NTIS (US Sales Only), PC A05/MF A01. File Number DE87751321.

The present work describes an attempt to measure the probability for the two-photon transition between two adjacent nuclear states in the presence of an allowed, strongly predominant one-photon decay, using the Heidelberg-Darmstadt Crystal Ball Spectrometer. The branching ratios of the two-photon decay of the first excited, 2/sup +/ levels of /sup 18/O and /sup 28/Si relative to the one-photon, E2 transitions to the 0/sup +/ ground states were determined to be: Wγγ/Wγ = (0.7 +- 2.4) x 10/sup -6/ for the 2/sup +/>0/sup +/ transition in /sup 18/O and Wγγ/Wγ = (1.6 +- 1.8) x 10/sup -6/ for the 2/sup +/>0/sup +/ transition in /sup 28/Si. Since both results are consistent with zero, it is possible to express them as the upper limits for the two-photon decay (3 δ) of 7.9 x 10/sup -6/ of /sup 18/O and 6.9 x 10/sup -6/ of /sup 28/Si 2/sup +/ levels. These values are by far the smallest ones reported to be observed in a two-photon decay of a nuclear state. For /sup 18/O, the result disproves theoretical estimates of the corresponding two-photon E1F1 matrix element was well as experimental values deduced from multiple-Coulomb-excitation measurements. The main experimental difficulties were caused by the gamma rays from one-photon transitions and were found to be connected with cross-talk events due to bremsstrahlung of Compton electrons and not - as generally believed - positron annihilation in flight.

23948 **(INIS-mf—10353) Studies on the light heavy ion system /sup 6/Li+/sup 16/O.** Glasner, K. (Bochum Univ. (Germany, F.R.). Fakultaet fuer Physik und Astronomie). 6 Jun 1984. 161p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751311.

In the present thesis the system /sup 6/Li+/sup 16/O is studied in the range of the Coulomb threshold. The measured excitation functions exhibit almost without exception correlatedly occurring structures at E/sub lab/=5.4 MeV respectively 6.5 MeV (this corresponds to E/sub x/(/sup 22/Na)=18.5 MeV respectively 19.3 MeV). A detailed statistical analysis consisting of the calculation of the fluctuation band widths in the sense of the Ericson theory, the peak-counting analysis, the Fourier analysis, the auto-/cross-correlation analysis, as well as the calculation of the energy-dependent cross correlation and deviation functions identifies these phenomena as resonances (99% confidence limit). Further structures at E/sub lab/=4.7 and 7.8 MeV (corresponds toE/sub x/=17.9 respectively 20.2 MeV) reach the 90% confidence level. The mean coherence width resulted to Γ ≅ 130 keV and lies by this distinctly below the experimentally determined resonance widths of 350 keV ≦Γ/sub tot/≦800 keV. The positions of the resonances can be well described by the assumption of a K=1 rotational band in the nucleus /sup 22/Na. Beside the model-dependent spin assignment the distribution of the angular momenta in the entrance channel suggests a negative parity of the band. By means of the experimentally determined linear cross correlation coefficients for isobaric analogue decay channels furthermore the Coulomb matrix element is determined to <H/sub x/>=1.5 keV. The comparison with the mean level width of the compound nucleus /sup 22/Na at excitation energies around 19 MeV indicates an extremely low Isospin violation. (orig./HSI).

23949 (INIS-SU—392, pp 321) **Total cross sections of alpha particle interaction with beryllium and carbon nuclei.** Dubar, L.V.; Eleukenov, D.Sh.; Nemets, O.F.; Slyusarenko, L.I.; Tokarevskij, V.V.; Yurkuts, N.P. 1986. 23951 **(JINR—R-15-85-775) /sup 10/Be(p,n) reaction at < 2 MeV proton energy. A possible ultrasensitive method for /sup 10/Be determination.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1985. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701440.

Cross section (σ) of the /sup 10/Be(p,n) reaction has been measured in the 800-2000 keV energy range of protons. The experiments were performed on the beam of electrostatical Van der Graaf generator. The maximum value σ approximately equal to 260 mb was observed at Esub(lab)=1050 keV, near the threshold of the /sup 10/Be(p,n)/sup 10/B* reaction (1/sup +/ level, E=718 keV). The mean cross section value in the Esub(lab)=1030-1400 keV energy interval was estimated to be antiσ approximately equal to 180 mb. Sensitivity limit of the /sup 10/Be-determination by the (p,n) reaction was evaluated as approximately 10/sup 7/ atoms or approximately 10sup(-11) atom per atom of /sup 9/Be. 20 refs.; 3 figs.; 1 tab.

23952 **(LA—10941-T) Inelastic pion scattering by ^{13}C at low energies.** Mitchell, J.H. (Los Alamos National Lab., NM (USA)). Mar 1987. Contract W-7405-ENG-36. 162p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87006168.

Angular distributions for inelastically scattered pions were obtained for several states in ^{13}C at an incident energy of 65 MeV. The data include results from both π^+ and π^- measurements. In addition, π^- measurements were made at T/sub π/ = 50 MeV at one angle to give a two point fixed-q excitation function. The data are compared to theory and the data of others. As might be expected, medium corrections are shown to be considerably more important at low energies than at resonance. This is true for inelastic transitions of multipolarity 0,2 and 3. Parameters derived from an analysis of elastic pion scattering and SCX data also provide an adequate description of the inelastic transitions. The charge asymmetry in the cross sections for the $9/2^+$ state that was seen at resonance persists at these energies. This result is consistent with an impulse approximation treatment of the spin-flip amplitude. This is true even though the incoming energy of the pions is far below the range where the validity of an impulse treatment is expected. 65 refs., 45 figs.

23953 **Reaction ^{6}Li(e,e/sup '/d) ^{4}He and the α-d momentum distribution in the ground state of ^{6}Li.** Ent, R.; Blok, H.P.; van Hienen, J.F.A.; van der Steenhoven, G.; van den Brand, J.F.J.; den Herder, J.W.A.; Jans, E.; Keizer, P.H.M.; Lapikas, L.; Quint, E.N.M.; and others. (Natuurkundig Laboratorium, Vrije Universiteit, 1007 MC Amsterdam, The Netherlands). *Physical Review Letters;* **57**: No. 19, 2367-2370(10 Nov 1986).

The α-d momentum distribution in the ground state of ^{6}Li has been measured in parallel kinematics with the reaction ^{6}Li(e,e'd) ^{4}He in the momentum range 0<p/sub m/<270 MeV/c. The reaction can be described by a direct coupling of the virtual photon to a deuteron in ^{6}Li. The results agree well with the predictions of a three-body αNN model of ^{6}Li.

6514 Nuclear Properties And Reactions, A=20-38, Experimental

23954 **(INIS-mf—10326) Systematic study of the deuteron scattering on even-even sd-shell nuclei by means of the particle-gamma angular correlation at E/sub d/=10 MeV.** Ortner, H.W. (Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Naturwissenschaftliche Fakultaet 1 - Mathematik und Physik). 17 May 1984. 102p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE87751312.

At the Erlangen tandem accelerator the differential cross sections and the particle-γ-angular corrections for the deuteron scattering to the 1st excited state on the nuclei /sup 20,22/Ne and /sup 32,34/Se were measured. The analysis of the data was performed by distorted-wave-Born-approximation (DWBA) and coupled-channel (CC) calculations in the framework of extended optical models. A special aim was thereby layed on the optical potential necessary for the description of the data and the kind of the model. The d-γ angular correlation was thereby proved as valuable tool for the fit of the real and imaginary part of the optical potential. the symmetric DWBA (equal potentials in the entrance and exit channel) yielded only for the nuclei with relatively small quadrupole deformation (/sup 32/S,/sup 34/S) a sufficient description. For more deformed nuclei the DWBA couldn't under application of credible potentials reproduce especially the angular correlation data. A much more consistent description of the data in the highly deformed nuclei yielded CC calculations with optical potentials which were for all nuclei very similar. (orig./HSI).

23956 **Spin-spin potentials in /sup 27/Al/sub pol/+n/sub pol/ and the nuclear Ramsauer effect.** Gould, C.R.; Haase, D.G.; Seagondollar, L.W.; Soderstrum, J.P.; Nash, K.E.; Schneider, M.B.; Roberson, N.R. (North Carolina State University, Raleigh, North Carolina 27695 and Triangle Universities Nuclear Laboratory, Duke Station, Durham, North Carolina 27706). *Physical Review Letters;* **57**: No. 19, 2371-2374(10 Nov 1986).

Spin-spin effects in neutron-nucleus interactions have been studied with a polarized /sup 27/Al target and polarized neutrons of energies 5 to 17 MeV. Because of nuclear Ramsauer interference, real and imaginary spin-spin terms in the optical potential give rise to energy dependences of spin-spin effects which are out of phase. We find a central real potential V/sub SS/ = 750 +- 440 keV, consistent with folding-model calculations, and a central-volume imaginary potential W/sub SS/ = -780 +- 320 keV, related to compound-nuclear absorption effects.

23957 **(INDC(CPR)—010/L) Gamma ray production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb at 90 deg. .** Zhou Hongyu; Tang Lin; Yan Yiming. (International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee). Nov 1986. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701563.

Discrete γ-ray spectra and production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb targets have been measured at 90 deg. using a 110.7cm/sup 3/ Ge(Li) detector. A single γ-ray peak was measured for C. For Al 34 γ lines, for Fe 41 γ lines, for V 61 γ lines and for Nb 79 γ lines were measured. 25 refs, 13 figs.

23958 (INIS-mf—10327) Scattering of polarized neutrons on argon and study of the complex spin-orbit potential. Schneidereit, U. (Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Naturwissenschaftliche Fakultaet I - Mathematik und Physik). 10 Feb 1985. 80p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87751193.

At the Erlangen scattering facility for polarized neutrons measurements on liquid argon were performed at 11 and 13.5 MeV. Thereby the experimental arrangement of the facility was extended to 23 detectors. The amplification of each detector is stabilized by high-voltage post-regulation. In the measurement of liquid argon a thin-walled aluminium dewar was applied the filling quantity of which was kept constant by a filling facility. The background from this dewar amounts only 9% of the argon counting rate. The analysis of the data (analyzing power, differential cross sections, and σ/sub tot/) showed that the application of an imaginary spin-orbit potential in the framework of the optical model improves essentially the description of the measurement. A study of the geometries of the spin-orbit potential led to smaller values of the diffuseness proportional to 0.5 fm than proposed by global parameter sets. For the radius of the imaginary term of the spin-orbit potential the analysis yielded a value proportional to 1.38 fm which lies considerably above the real spin-orbit radius. The quantity of the imaginary spin-orbit diffuseness tends to smaller values than 0.5 fm. Comparative calculations with neutron data on /sup 40/C a allow a common description of both nuclei and contain also in the result an imaginary spin-orbit potential. From the calculations the isospin-dependent parts of the potentials could be estimated. From the analysis of the first excited state of /sup 40/Ar the values of the coupling constants of the quadrupole deformation could be determined to 0.23 +- 0.02. The measured total cross sections agree well with other measurements.

23959 (INIS-mf—10344) Fusion with polarized heavy ions. Particle evaporation and fission at energies at and below the barrier. Butsch, R. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1986. 133p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751324.

With the polarized /sup 23/Na beam available at the Max-Planck-Institute for Nuclear Physics in Heidelberg the fusion reactions /sup 23/Na+/sup 48/Ti and /sup 23/Na+/sup 206/Pb at energies at and below the barrier were studied in order to obtain information about the dynamics of the fusion process at low energies. With the alignment of the nuclear spin of the /sup 23/Na ions (symmetry axis = beam axis) beside the fusion cross section a further independent measurement quantity, the tensor analyzing power for fusion, is obtained. For the system /sup 23/Na+/sup 48/Ti the evaporation residual nuclei were detected by the time-of-flight method, while in the systems /sup 23/Na+/sup 206/Pb the fission fragments were identified by the ΔE-E method. In both systems the fusion cross section is described by the evaporation-residual-nucleus cross section respectively the fission cross section. The measured excitation functions of the cross section and the tensor analyzing power for fusion of both systems were analyzed regarding the coupling to nuclear excited states. For this the used model, in which the fusion cross section is approximated as difference of the reaction and the inelastic cross section, had to be extended to aligned projectiles with spin. (orig./HSI).

23960 (INIS-mf—10345) Study of peripheral heavy ion reactions at 84 MeV/nucleon. Rabe, H.J. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1986. 113p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE87751323.

In peripheral heavy ion reactions between /sup 18/O and /sup 58,64/Ni, /sup 18/O and /sup u97/Au, as well as between /sup 12/C and /sup 197/Au at an incident energy of 84 MeV/nucleon azimutal angular correlations between projectile fragments and light particles (p,d,t,α) were studied. By the selection of heavy projectile fragments Z/sub p/$\geqq$6 and small multiplicity of the light particles from the target or from the reaction zone peripheral reactions between the heavy ions were selected. The data analysis showed that the emission of light particles under ΔPHI=180/sup 0/, i.e. on the side lying relative to the beam axis opposite to the projectile fragment, is distinctly increased. The counting-rate ratio N(ΔPHI=180/sup 0/)/N(ΔPHI=0/sup 0/) can amount up to 3.5:1. A detailed analysis yields the result that the anisotropy is closely correlated to the transverse momentum p/sub t/ of the projectile fragments, whereby the connection for p/sub t/ 600 MeV/c is nearly linear. The absolute cross section for these processes with small multiplicity of the light particles in coincidence with heavy projectile fragments (Z/sub p/$\geqq$6) lies in the order of magnitude of 200 mb. (orig./HSI).

23961 (INIS-SU—392, pp 341) Determination of spin of deep-lying proton-hole states in the /sup 58/Ni(d,/sup 3/He)/sup 57/Co reaction. 23962 (JINR—R-1-86-117) Emission of fast deuterons at the proton interactions with emulsion heavy nuclei. Bannik, B.P.; Bobodzhanov, I.; Bogdanov, V.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1986. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701441.

A relative yield of deuterons with momenta of approximately (0.23-0.45) GeV/c per nucleon has been measured at the interaction of 4.5 GeV/c protons with Ag, Br emulsion heavy nuclei. Similar data obtained for 24 GeV/c proton momentum at other laboratories are analyzed. From the comparison of the experimental results it follows that at an incident particle momentum of 24 GeV/c cascade nucleons are not the only reason of deuteron emission; some mechanism not yet studied makes a significant contribution. 21 refs.

23963 (DOE/ER/40293—1) Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987. Carlton, R.F. (Middle Tennessee State Univ., Murfreesboro (USA). Dept. of Chemistry and Physics). Mar 1987. Contract FG05-86ER40293. 28p. NTIS, PC A03. File Number DE87006368.

The research performed during the reporting period consisted of: (1) the analysis of total cross section data for the isotopes of: ^{48}Ca up to a neutron energy of 4 MeV; /sup 122,124/Sn up to 200 and 300 keV, respectively; and ^{189}Os up to 170 eV; (3) the preliminary interpretation of these results in the framework of the optical model in an effort to extend the systematics of the potentials deduced from resonance and non-resonance information obtainable from ORELA neutron cross section data; and (4) the interpretation and publication of nuclear structure results for $_{48}$Ca, and the osmium isotopes and their implications for the use of the Re/Os chronometer in estimating the age of the universe. Continued evidence for the l-dependence of the real well depth of the optical model for neutron elastic scattering from selected target nuclei is seen. Finally, a system for rapid analysis of total neutron cross section data has been developed for microcomputer application which includes the capability for spin and parity assessment for individual resonances and plotting of individual partial wave contributions to the total cross section. This should significantly enhance the study of nuclear structure via neutron interaction. 10 refs., 8 figs., 7 tabs.

23964 (INIS-mf—10342) Studies of nuclear high-spin levels in the mass range around Z $\simeq$90 and Z $\simeq$150. Sanchez Cordova, H.A. (Heidelberg Univ. (Germany, F.R.). Naturwissenschaftlich-Mathematische Gesamtfakultaet). 1986. 71p. (In German). NTIS (US Sales Only), PC A04/MF A01. File Number DE87751320.

The aim of this thesis was the study of high-spin states in medium heavy nuclei around Z $\simeq$40 and heavy nuclei around Z $\simeq$90 by means of γ-spectroscopy. The experiments were performed

at the Heidelberg tandem accelerator Emperor of the MPI for nuclear physics. By means of the reaction /sup 58/Ni(/sup 32/S,xyz) for the first time a level scheme for /sup 87/Nb is proposed. By means of the same reaction the Yrast line in /sup 84/Zr is studied. Furthermore the β/sup +/ decay of /sup 87/Nb was studied via the γ-radiation following the β decay. The beta strength distribution exhibits a strong structurization contrarily to assumptions yet always used in applications. By application of a double anti-Compton spectrometer by means of the reaction /sup 122/Sn(/sup 35/Cl,xyz) the yrast line of /sup 153/Ho was studied. Spins up to I=89/2 h were observed. This spin belongs to the highest hitherto observed spins of discrete nuclear levels. The level scheme of /sup 153/Ho could by this be studied far in the range of the M1 quasi-continuum.

23965 (INIS-SU—392, pp 339) **Spectra of charged particles produced in the 24.6 MeV α-particle interactions with /sup 61/Ni and /sup 63/Cu nuclei.** Smirnov, A.V.; Antropov, A.E.; Osorio, V.F.; Zarubin, P.P. 1986. 23966 **(OUP—83-16) Study of the angular distribution of the secondary particles of anti pAg/Br reactions at 1.4 GeV/c incident momentum observed in photographic emulsion.** Breivik, F.O.; Jacobsen, T.; Soerensen, S.O. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1983. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750899.

Some features of anti pAg/Br reactions at 1.4 GeV/c incident momentum are studied by means of the emulsion technique. The distributions of the number of charged particles/event are presented. The angular distributions indicate som anisotropic process in the nuclear matter, possibly shock waves, and some back-to-back emission.

23967 **(OUP—83-44) Anisotropic and correlated emissions of short range charged particles in anti pAg/Br reactions of 1.4 GeV/c incident momentum observed in photographic emulsions.** Breivik, F.O.; Jacobsen, T.; Soerensen, S.O. (Oslo Univ. (Norway). Fysisk Inst.). Dec 1983. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750900.

Anti pAg/Br reactions at 1.4 GeV/c incident momentum were studied by means of the emulsion technique. A group of short range charged particles was observed. For the events with one short track, a backward and transversal emission was seen, probably due to some very fast process. For the events with two short tracks, a back-to-back emission was seen, indicating some two-body decay where the target nucleus possibly behaves spectator-like. The rates and forward collimations suggest that the same physical process causes the different multiplicities.

23968 **(INIS-mf—10341) Study of the fission dynamics of hot atomic nuclei by means of the neutron emission.** Zank, W.P. (Freie Univ. Berlin (Germany, F.R.). Fachbereich Physik). 15 Jan 1986. 83p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87751319.

In the framework of the present thesis fusion processes with subsequent fission are studied in the heavy ion reactions /sup 141/Pr+/sup 40/Ar and /sup 175/Lu+/sup 12/C. The aim of the studies is the determination of the hitherto not precisely known lifetimes of excited composite systems before these separate into two fission fragments. In order to study such effects the reactions /sup 141/Pr+/sup 40/Ar at 316 MeV argon as well as /sup 175/Lu+/sup 12/C at 192 MeV carbon projectile energy were measured. The evaluation of the measured angular distribution of the fission fragments and the evaporation residual nuclei yielded the angular momentum ranges which lead to the fusion with subsequent fission respectively to evaporation residual nuclei. A large critical angular momentum of 109 +- Planck constant in the reaction Pr+Ar and an essentially smaller value of 62 +- 6 Planck constant for the system Lu+C result regarding the uncomplete fusion. The analysis of the neutron emission measured in coincidence with fission fragments allowed the determination of the neutron multiplicities for the composite system before the scission as well as for each single fission fragment. Large multiplicities before the scission of 3.6 +- 0.6 and 6.3 +- 0.8 in the reactions Pr+Ar and Lu+C were observed. In the study of the pre-equilibrium neutron emission in the incompletely fusioning system Lu+C for the first time a strong concentration of the emitted neutrons in the plane defined by the direction of flight of the fission fragments and the ion beam was shown. This anisotropy can be interpreted as anisotrope neutron emission relative to the angular momentum direction of the composite system. A corresponding anisotropy was not observed for the neutron evaporation from the completely equilibrated system. (orig./HSI).

23972 **(INIS-mf—10338) Nuclear structure studies on /sup 178/Hf by means of neutron induced gamma and electron spectroscopy.** Al Mamun Imtiazul Haque. (Koeln Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 2 Feb 1985. 171p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751314.

By means of thermal and epithermal neutron captures the nucleus /sup 178/Hf was studied. With high-resolution spectrometers the gamma transitions and conversion electrons were measured. By the found energies, intensities, and multipolarities the level scheme of /sup 178/Hf could be essentially improved and extended. Totally 270 secondary (from 600 gamma lines) and 39 primary gamma transitions were used in order to establish the level scheme with 66 levels in 18 rotational bands. For this 92% of all gamma intensities were used. Several new rotational bands were established. By improved gamma energies the level scheme below 2 MeV for spins between 0 and 6 is well confirmed. Moreover by the resolution of several multiplets the decay structure of the levels could be explained. The thermal neutron capture state results from the primary gamma transitions to Q/sub n/=7626.34 (23) keV.

Electrical monopole transitions from several states were studied in order to determine the X(E0/E2) values. (orig./HSI).

In JINR rapid communications. Collection.

With the help of semiconductor detectors a more precise determination of the energies of /sup 158/Gd and /sup 158/Dy excited states populated in the decay of /sup 158/Tb has been made. By the use of Xγt-coincidence method the absence of an ultralow-energy K capture branch to the state at 1187 keV (/sup 158/Gd) was shown. That excludes the possibility of neutrino balance in this decay. This conclusion was confirmed by the analysis of the probabilities of the K capture to the states at 1023 and 1041 keV, which gives the value of Q=1212Λ-/sub 8//sup +10/ keV for the mass difference of /sup 158/Tb-/sup 158/Gd (where Q is a decay energy). 12 refs.; 3 figs.; 2 tabs.

23977 **(JINR—R-6-85-792) /sup 158/Tb decay and possibility of more precise determination of electron neutrino mass.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1985. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701438.

Submitted to the journal Bull. Acad. Sci. USSR, Phys. Ser. .

The measurements of the single γ-quantum and γγt-coincidence spectra in the /sup 158/Tb decay the results of which allowed the decay scheme's more precise determination have been made. From the analysis of the electron capture relative probabilities to the 1023.7 and 1041.6 keV levels the value of the mass difference of /sup 158/Tb-/sup 158/Gd, Q=1218sub(-11)sup(+15)keV, indicating the energy forbidding of K-capture to the 1187.1 keV level of /sup 158/Gd has been determined. This conclusion was confirmed by high-precision KXγt-coincidence measurements, which have shown that the relative probability of K-capture to the state at 1187.1 keV in the /sup 158/Tb decay was <2.5 x 10sup(-5)Psub(K)sup(1023) on the 90% confidence level. On the base of the available data the conclusion is made about unperspectivity of /sup 158/Tb decay studying with the purpose of electron neutrino mass precise measurement. 23 refs.; 9 figs.; 4 tabs.

23978 **(JINR—R-6-85-813) Lifetimes of sup(171)Yb excited states.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1985. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701442.

Lifetimes of 7/2/sup -/7/2[514] 835 keV (Tsub(1/2)<0.31 ns) and 9/2/sup +/, 7/2[633] 167 keV (Tsub(1/2)<0.46 ns) excited states sup(171)Yb have been measured by the delayed coincidence method in three-dimensional analysis mode. Within the quasiparticle-phonon modeltaking into account the Pauli principle the energies, structures of nonrotational states of sup(171)Yb and reduced probabilities of electric dipole E1 - and quadrupole E2 - transitions are calculated. 15 refs.; 2 tabs.; 2 figs.

23979 **(OUP—83-24) Decay from the two-quasiparticle regime in even-even deformed rare earth nuclei.** Henriques, A.; Thorstensen, T.F.; Hammaren, E. (Oslo Univ. (Norway). Fysisk Inst.). Jun 1983. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750911.

A bump at 1 MeV has been identified in coincidence gamma-ray spectra from the (/sup 3/He,/sup 4/He) reaction in deformed rare earth nuclei. Particle/gamma-ray angular correlation indicates a dipole character. It is suggested that this bump corresponds to transitions from two-quasiparticle states to the ground state band.

23980 **^{152,154}Eu(t,α) reactions: studies of the 11/2[505] bands in ^{151}Sm and ^{153}Sm.** Martz, H.E.; Lanier, R.G.; Struble, G.L.; Mann, L.G.; Sheline, R.K.; Stoeffl, W. (Lawrence Livermore National Lab., CA). *Nuclear Physics [Section] A;* A439: 299-316(1985). Contract W-7405-ENG-48.

Radioactive targets of ^{153}Eu(13 y) and ^{154}Eu(8.5 y) have been used to study the ^{152,154}Eu(t, α)^{151,153}Sm reactions at an incident triton energy of 16 MeV. In these studies, the authors have identified the bandhead and three excited rotational states of the 11/2[505] neutron orbital in both the ^{151,153}Sm nuclei. The angular distributions and relative intensities for states in this band in both ^{151,153}Sm are reproduced reasonably well by using. DWBA calculations and by assuming strongly deformed single-particle wave functions. The authors have used our results and the results of other studies to determine the equilibrium prolate shapes of both ^{151,153}Sm when the odd-neutron quasiparticle occupies the 11/2[505] orbital. The authors estimate $\beta_2 \sim 0.26$ for ^{151}Sm and $\beta_2 \sim 0.3$ for ^{153}Sm. 33 references. 6 figures, 6 tables.

(Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Nuclear Reactions). 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780104. (N—7-85).

In JINR rapid communications. Collection.

A new type of decay of /sup 233/U by neon nucleus emission is discovered. The detection of neon among a great number of α particles was performed using track detector of polyethyleneterephthalate. At the exposition of 75 mg of /sup 233/U layer 16 decay events have been detected during 28 days. It corresponds to relative probability of the process with respect to α-decay lambda sub(Ne)/lambda sub(α)=(7.5 +- 2.5) x 10sup(-13). 9 refs.; 2 tabs.

23986 **Noise equivalent source for frequency domain measurements from the spontaneous fission of ^{252}Cf.** Mihalczo, J.T.; King, W.T. (Oak Ridge National Lab., TN). *Transactions of the American Nuclear Society;* **53**: 475-476(1986). (CONF-861102—).

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

An experiment was performed to determine the frequency domain noise equivalent source from the spontaneous fission of ^{252}C. The measurements had maximum frequencies (<50 kHz) much lower than those corresponding to the frequencies associated with emission and detection times of particles from spontaneous fission of ^{252}Cf. This experiment was performed with a ^{252}Cf source on one plate of a parallel-plate ionization chamber and two large plastic scintillators (2 x 1 x 0.33 ft) at distances of 75 to 150 cm from the source. This noise equivalent source is important when using the ^{252}Cf source-driven neutron noise analysis method to determine subcriticality at low values of k/sub eff/ (<<0.8) because at low k/sub eff/ values, fluctuations of the neutron population in the system caused by the varying numbers of neutrons from spontaneous fission of ^{252}Cf become important. The noise equivalent source for these measurements has been formulated based on the Schottky formalism according to the method of Cohn.

23987 **(DOE/ER/05126—300) Nucleon optical potential: an extended three-body problem or a restricted infinite-body problem.** Redish, E.F. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy). 1986. Contract AS05-76ER05126. 20p. (ORO—5126-300; CONF-860832—12). NTIS, PC A02/MF A01; GPO Dep. File Number DE87002265.

From 11. international conference on few-body systems in particle and nuclear physics; Tokyo, Japan (24 Aug 1986).

A three-body approach to the single-scattering approximation is developed for the nucleon-nucleus optical potential in the energy range 100 to 350 MeV. The kinematics of three-body momentum conservation and the systematics of the off-shell nucleon-nucleon T matrix leads to an effective interaction which is more non-local than those usually considered in non-relativistic models. Problems with the standard approach are pointed out and it is shown that the new non-locality can account for some of the effects previously assigned to relativity or the Pauli principle. (DWL)

23988 **(DOE/ER/40038—86-01) Configuration space Faddeev calculations: Progress report for period 1 January 1985-31 December 1985.** Payne, G.L.; Klink, W.H.; Polyzou, W.N. (Iowa Univ., Iowa City (USA). Dept. of Physics and Astronomy). Jan 1986. Contract AC02-81ER40038. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007556.

Three-body calculations provide a tool to identify the relevant degrees of freedom in the nucleus and to understand the interactions between these degrees of freedom. For the three-body system one can construct models that are simple enough so that exact numerical calculations can be performed. Thus, differences between the model results and the experimental results can be used to test the validity of the model. We have continued to develop the computer codes to obtain accurate solutions for the three-body problem in configuration space. Using these codes we have studied the effects of the three-body force on the three-body system, and we have begun a study of the magnetic moments of the trinucleon system. We have investigated the constraints on the current operators in relativistic quantum mechanical models. We have shown that these constraints lead to nonvanishing many-body contributions to the currents. Also, we have studied the connection between particle theories and field theories for the electromagnetic current operators. We have continued our program to obtain a representation of the scattering operator which satisfies unitarity, causality, cluster properties, and space-time invariance. 11 refs.

23989 **(GSI—86-46-Prepr.) Pion and photon bremsstrahlung in a heavy ion reaction model with friction.** Stahl, T.; Uhlig, M.; Mueller, B.; Greiner, W.; Vasak, D. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Nov 1986. 61p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751236.

Based on a classical dynamical model of nuclear motion with a velocity dependent friction force we calculate pionic and electromagnetic bremsstrahlung emitted in heavy ion collisions with bombarding energies between 20 and 84 MeV/n. For arbitrary projectile-target combinations and with a fixed value of the only parameter of the model, the friction coefficient κ, our calculations reproduce the observed beam energy and target mass dependence for pions. The gamma yields, calculated with the same value of κ, reproduce the measured dependence of the cross-section on energy and target mass, but underestimate the published data by a factor

two. This is a good agreement in view of the discrepancies between different experimental groups.

23990 **(IC—86/52) Application of nuclear data to the research of nuclear theory.** Xu Fuxin. (International Centre for Theoretical Physics, Trieste (Italy)). Apr 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701425.

The paper applies the related data from the work of Wapstra and Bos to the following three aspects with a satisfactory result: 1) the new formula of binding energy fixed by nuclear data and the least square method; 2) a comparison of shell correction terms in the nuclear mass formulas and 3) an analysis for location of beta stable line and curvature of mass parabola. 8 refs.

23991 **(IC—86/128) Coupled mass-asymmetry and relative motion coordinates for the collective alpha-particle transfer resonances.** (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701432.

The dynamical fragmentation theory is extended to include the coupling between mass-asymmetry and relative-motion coordinates and its effect on α-particle transfer resonances is studied. For 75 MeV /sup 16/O+/sup 40/Ca reaction, this coupling is shown to be of the negligible order for the α-particle transfer yields. 15 refs, 3 figs, 1 tab.

23992 **(IC—86/160) Eikonal multiple scattering model within the framework of Feynman's positron theory.** Tekou, A. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701525.

The Bethe Salpeter equation for nucleon-nucleon, nucleon-nucleus and nucleus-nucleus scattering is eikonalized. Multiple scattering series is obtained. Contributions of three body interations are included. The model presented below may be used to investigate atomic collisions. 36 refs.

23993 **(IC—86/200) Skyrme interaction and the properties of cold and hot neutron matter.** Mansour, H.M.M.; Hassan, M.Y.M.; Ramadan, S. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701539.

The binding energy per particle, effective mass, magnetic susceptibility, etc for neutron matter are calculated using the Skyrme interaction SKII. Relativistic corrections to the non-relativistic Skyrme effective interaction to order 1/C/sup 2/ are also used to calculate the corrections for the binding energy of neutron matter. The correction is very small for small values of k/sub h/ and increases as k/sub n/ is increased. The thermal properties of neutron matter are calculated also using SKII force. The temperature dependences of the volume and spin pressure are determined. The results obtained show a similar trend as previous theoretical estimates by different methods of calculation. 17 refs, 4 figs, 2 tabs.

23994 **(INIS-mf—10299) Electromagnetic properties of the three-nucleon ground state.** Strueve, W. (Hannover Univ. (Germany, F.R.). Fachbereich Physik). 15 Feb 1985. 152p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751189.

The electromagnetic form factors of the three-nucleon ground state are calculated on the base of an exact solution of the Faddeev equations. In a Hilbert space of nucleons and a possible Δ-isobar the effects of a non-perturbative description of the Δ-isobar on the magnetic form factors are studied. Pure nucleonic current operators with two- and three-particle character can be described in the extended Hilbert space by simpler one-body operators. Additionally nonrelativistic meson-exchange corrections due to π and rho exchange are calculated consistently with the requirements of current conservation. Further relativistic corrections are estimated on selected examples. The calculations yield a total magnetic contribution of the Δ-isobar which is smaller than hitherto assumed, a static approximation of the Δ propagation is proved as inadmissible and must be rejected. Together with the meson-exchange corrections a well agreement with the experimental data at low momentum transfers results. Especially the magnetic moments and magnetization radii can be explained. For higher momentum transfers the results show the importance of further corrections. The regard of selected relativistic corrections leads to a good description of the experimental magnetic form factors. Also by this way the position of the minimum and the height of the second maximum in the /sup 3/He charge form factor can be explained. The comparison with the latest experimental results reveals furthermore unresolved problems in the description of the /sup 3/H charge form factor.

23995 **(INIS-mf—10300) Microscopic description of electromagnetic transitions and photonuclear reactions.** Mertelmeier, T. (Erlangen-Nuernberg Univ., Erlangen (Germany, F.R.). Naturwissenschaftliche Fakultaet 1 - Mathematik und Physik). 21 May 1985. 149p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751192.

In the present thesis in the framework of the Cluster model the so-called refined resonating-group method is extended in order to describe electromagnetic properties and photonuclear processes in light nuclei. For this the matrix elements of the electromagnetic transition operators of arbitrary multipolarity are explicitely given in the long-wave approximation, whereby these integrals are calculated by means of the generating functions of the spherical harmonics and quadratic supplement. As application it succeeds to reproduce well the electromagnetic moments and transitions between bound states of the nuclei /sup 6/Li and /sup 7/Li. Furthermore the radiative capture reaction /sup 3/He(α,γ)/sup 7/Be is studied at low energies. As further application we calculate the electric polarizability of /sup 7/Li which is obtained in the sub-Coulomb scattering on heavy ions from the experimental analysis. (orig./HSI).

23996 **(INIS-mf—10324) Real and imaginary part of the potential between two nuclei and the realistic nucleon-nucleon interaction.** Trefz, M. (Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik). 19 Jun 1985. 131p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751197.

Starting from a realistic nucleon-nucleon interaction (Reid soft-core) in the model of two infinitely extended confusing nuclear matter complex energy densities are calculated by means of a G matrix. By means of a generalized local-density approximation the results are transferred to finite nuclei. In the framework of the frozen-density approximation in the energy-density formalism a complex potential between two nuclei is calculated. The potential calculated so contains not the contribution of 1-particle-1-hole states to the optical potential. The contribution of these states is therefore calculated in the Feshbach formalism, respectively these states are explicitely regarded in coupled-channel calculations. The model is applied to light (for instance /sup 12/C+/sup 12/C), medium heavy (for instance /sup 48/Ca+/sup 48/Ca), and heavy (for instance /sup 40/Ar+/sup 208/Pb) systems. Potentials for incident energies of 5-84 MeV per projectile nucleon are calculated. By means of these potentials differential cross sections and reaction cross sections are determined and compared with the experimental data. The energy dependence of the reaction cross section is discussed. It is shown that at higher energies (40 MeV/N) the differential cross sections can be quantitatively reproduced. For the reaction cross section in the whole energy range good agreement with the experiment is obtained. Contrarily to current theoretical models it is proved that at low energies the excitation of collective states yields a large contribution to the reaction cross section and therefore must not be neglected.

23997 **(INIS-mf—10337) Effects of the angular-momentum projection on cranking wave functions.** Wuest, E. (Giessen Univ. (Germany, F.R.). Fachbereich Physik). 23 Mar 1984. 169p. (In German). NTIS (US Sales Only), PC A08/MF A01. File Number DE87751313.

In this thesis the influence of the angular-momentum projection in cranking Hartree-Fock-Bogolyubov wave functions was studied by the "variation before projection" method. This study is equivalent to the question how well the cranking wave function represents an angular-momentum eigenstate because cranking represents an approximate angular-momentum projection. On the basis of the model describing the heterogeneous states in nuclear matter the dependence of the behaviour of a two-phase system of nucleons (fermions) + sixquarks (bosons) is investigated at the temperature (theta) and density (rho). Every phase is the collection of n-quark colourless clusters (n3 for nucleus and n=6 for sixquark) described as the Van-der-Waalse gas. Analysis demonstrates the advantage of the heterogeneous state for a wide region of theta and rho. 12 refs.; 5 figs.

In JINR rapid communications. Collection.

It is shown that in the theoretical description of the fission process in the nucleus /sup 26/+H4Fm ther turn out to be two valleys on the potential-energy surface in the region of the scission point. One valley corresponds to the compact configuration of two nearly spherical fragments; and the other, to more separated strongly alongated fragments. Only mirror-symmetric shapes were considered. 17 refs.; 2 figs.

24023 **(INP—1227/PL) Hydrodynamical space-time evolution of the central region of rapidities in ultra-relativistic heavy ion collisions.** (Institute of Nuclear Physics, Krakow (Poland)). 1983. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701430.

The solutions of the hydrodynamic equations describing a longitudinally expanding quark-gluon plasma produced in central collisions of two large nuclei are investigated. It is argued that a fair description of the transverse flow of plasma is given - irrespective of the initial conditions - by the relativistic simple wave of Riemann, modulated by a factor resulting from cooling due to the longitudinal expansion of plasma. The role of fluctuations in the flow of plasma is also briefly discussed.

24024 **(ITEP—78(1985)) Studying the space structure of NN interaction.** (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701433.

The potential of the NN interaction Vsub(NN) is constructed with the account of coupling between the NN and the six-quark components of the wave function. To describe the NN interaction the collective variable rhosup(2) is used which is proportional to the sum of the quarks distances from the 6sub(q) centre-of-mass squared. Potential Vsub(NN) at rho -> infinity coincides with the one-exchange potential. At rho -> 0 potential Vsub(NN) increases as the energy of quarks localized in a small volume grows; this increase of the quark energy manifests itself as a repulsion in the 6q-system. The combined action of the repulsion at small rho and the confinement forces results in the transition nucleons 6q-bag occuring only in the narrow range around rho approximately equal to 1.5 fm. The constructed potential provides good description of the scattering lengths, effective radii and S-wave NN scattering phase shifts in the energy range of Tsub(lab) approximately equal to 600-800 MeV. 18 refs.; 4 figs.; 1 tab.

24025 **(ITF—86-51-R) Relativistic effects in deuteron electrodisintegration process.** Anchishkin, D.V.; Vizireva, L.; Kobushkin, A.P. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1986. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701581.

The problem of deriving the nucleon momentum distribution in a deuteron (NMDD) from the d(e, e'p)n reaction cross section is discussed in terms of light-cone dynamics. The main relativistic effect is shown to be the distinction of the relativistic internal momentum of a bound np-system from the nonrelativistic one. The relativistic description enables one to agree NMDD derived from the (e, e'p) reaction data and NMDD derived from the (d, p) and (e, e') reactions. 11 refs.; 5 figs.

24026 **(JINR—E-4-85-934) Alpha-like four nucleon correlations in the superfluid phase of atomic nuclei.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701436.

An interplay between the pairing correlations and the α-like four-nucleon correlations (α-type correlations) in the ground and low-lying excited states is of /sup 152/Nd, /sup 156/Sm, /sup 160/Gd, /sup 164/Dy, /sup 168/Er, /sup 176/Hf, /sup 180/W, /sup 184/Os, /sup 240/Pu, /sup 246/Cf nuclei predicted within a BCS-like model. It is shown that these α-type correlations are especially important in describing the α-clusterization process (the spectroscopic factors entering the α-decay and α-transfer reaction probabilities). It is also shown that the region of superfluid nuclei is enlarged due to the fact that the usual BCS neutron and proton super-

fluidity can mutually be induced by one another via the α-type correlations. 26 refs.; 1 fig.; 2 tabs.

24027 **(JINR—E-4-86-86) Analysis of the neutron energy spectra from the sup(208)Pb (p,n) sup(208)Bi reaction at Esub(p)=200 MeV.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701434.

Submitted to the journal Yad. Fiz. .

Microscopic calculation of the small-angle neutron energy spectra from the /sup 208/Pb (p, n) /sup 208/Bi reaction at Esub(p)=200 MeV are presented. It is shown that the distorted-wave impulse approximation and the microscopic theory of finite Fermi systems can be employed for describing the low-energy excitation region 0 <= Q <= 30 MeV with small momentum transfers. A quantitative estimate is obtained for the local charge of quasiparticles esub(q)[σtau]=0.8 that characterizes the quenching of the integral strength of spin-flip low-energy transitions and the relevant effects are discussed. 28 refs.

24028 **(JINR—R-4-85-908) Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei.** (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1985. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701435.

Submitted to the journal Z. Phys. .

A unified semimicroscopic approach to description of nucleon and low-energy α-particle interaction with nuclei is formulated. Using effective nucleon-nucleon interaction elastic and inelastic 25.05 MeV proton scattering and 104 MeV α-particle scattering on /sup 90/Zr nucleus are analysed. The effect of the Pauli principle and effective force dependence densities on the angular distributions of scattered particles is investigated. ECIS program is modified and numerical realization of semimicroscopic method of coupled channels for X-radiation surces is described. Stability of frequency of X-ray pulses on variation of voltage of a low-voltage power same effective nucleon-nucleon interaction a good decription of experimental angular distributions of elastic- and inelastic-scattered protons and α-particles is obtained. Account of exchage nucleon-nucleon correlations conditioned by the effect of the Pauli principle results in increase of elastic scattering cross sections for large scattering angles improving the description of cross sections. 34 refs.

24029 **(JINR—R-4-85-960) Giant angular resonance and structure of the lowest nuclear states.** Mikhajlov, I.N.; Usmanov, P.N.; Yuldashbaeva, Eh.Kh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1985. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701426.

The analysis is given of the Hamiltonian of the "two-rotor" model, which is based on the assumption that the "giant angular resonance" exists, i.e. that it is possible to rotate the neutron component of a deformed nucleus as a whole with respect to the proton component. The realization of the projections on the intrinsic axes of the angular momentum operators is found; the Hamiltonian matrix is determined in the basis convenient for the case of a strong coupling between neutrons and protons. The spectrum of the-rotor model is determined taking into account the off-diagonal matrix elements in the lowest order of the perturbation theory. The γ-factors and the probabilities of the M1-transitions are discussed. 7 refs.; 2 figs.

24030 **(JINR—R-4-86-42) Introduction of generator coordinates by the local-scale transformation method.** Marinova, L.P.; Stoitsov, M.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701427.

Submitted to the journal Teor. Mat. Fiz. .

A new way for introducing collective degrees of freedom in the framework of the generator-coordinate method /GCM/ is suggested in terms of local-scale point transformations. It is shown that the collective motions, connected with the local density evolution, can be described by single generator coodinate. The investigation of the collective properties of the system is reduced to a determination of two functions: i/ the weighting functions in the GCM, and ii/ a scalar function related to the local density of the system. The suggested approach is compared with GCM where the generatot coordinates are determined by the constrained Hartree-Fock method. 14 refs.

24031 **(JINR—R-4-86-53) On the algebraic structure of the Hamiltonian with a quadrupole interaction.** Atanas'er, G.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701428.

Submitted to the journal Z. Phys., A. .

The exact group of dynamical symmetry for the Hamiltonian with a quadrupole interaction Sp(3, R) is found. This permitted to map the initial fermion space into the model boson one and find energy eigenvalues for the simplest realization of the Sp(3, R) generators. It is demonstrated that one can arrive at the Hamiltonian of the treated model by the successive symmetry breaking with respect to Sp(3, R) and its subgroups. The reasons are given for the good description of the experiment by the interacting boson model and standard semimicroscopic model. 18 refs.; 4 figs.

24032 **(Juel—2068) Nuclear structure and reaction mechanisms studied on alpha-particle transitions.** Oelert, W. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Bochum Univ. (Germany, F.R.). Fakultaet fuer Physik und Astronomie). Jun 1986. 145p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751284.

Since the observation of the natural alpha decay of atomic nuclei the alpha particle was and is considered as an important component of the nuclear matter. The modern studies of alpha-particel transfer reactions are devoted to the question on four-particle correlations (alpha-particle clusters) generally in nuclear matter or also on nuclear surfaces. Thereby one is today yet absolutely far away from a unified picture of the mechanism of the alpha transfer: It is shown that different reaction and nuclear models must be used with different success for the interpretation of the data. Theoretical and experimental determination of spectroscopic strenght distribution were thereby developed mutually supportingly each other. On the experimental side the question of the reaction mechanism and the determination of its details is to be clarified. Here approaches were developed which lead to a unified description in the sd shell. Calculations in the formalism of the coupled channels with spectroscopic factors calculated in the framework of the shell model lead to convincing agreements between theoretical and experimental angular distributons regarding both their shape and their amplitude. Hereby it was shown that beside the determination of the potential parameters a two-stage reaction mechanism as in an alpha-particle transition after or before an inelastic excitation of the traget or residual nucleus is of decisive importance. (HSI).

24033 **(Juel-Spez—340) Subbarrier fusion and the quantized adiabatic time-dependent Hartree-Fock theory.** Gissler, R. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Bonn Univ. (Germany, F.R.)). Dec 1985. 117p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE87751217.

The subbarrier fusion of realistic heavy ion systems is numerically calculated in the frame of the quantized adiabatic time dependent Hartree-Fock theory using Skyrme interactions. (BRB).

24034 **(Juel-Spez—341) Calculation of the binding energy per nucleon and the quasi-particle interation in nuclear matter under consideration of relativistic medium effects.** Hippchen, T. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Dec 1985. 140p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751218.

In a first part, nuclear matter calculations have been performed in the Dirac-Brueckner approach using a) a nucleon-nucleon potential of one-boson-exchange (OBE) type and b) a more

realistic interaction in which the fictitious σ-exchange of the OBE-model is replaced by explicit 2π- and πrho-exchange diagrams. Both potential models yield the correct empirical binding energy and saturation density. It turns out that the total sum of relativistic effects caused by the emplicit 2 π- and πrho-exchanges is comparable to those due to σ-exchange. In a second part, the nuclear quasiparticle interaction, i.e. the Landau parameters, have been calculated in the central (F), isospin (F'), spin (G) and spin-isospin (G') channel, in an analogous way. Compared to nonrelativistic calculations (including conventional medium corrections like Pauli and dispersion effects), a strong improvement has been found, especially in the F- and G-channel. Finally, the influence of A/sub 1/-exchange is studied, in NN scattering and in nuclear matter. It turns out that, after a suitable and necessary readjustment of some meson parameters, its role is negligibly small.

24035 **(Juel-Spez—371) Study of the (/sup 3/He,t) reaction and the (p,n) reaction at intermediate energies.** Schulte, A. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik; Bonn Univ. (Germany, F.R.)). Sep 1986. 136p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751233.

Within the framework of the Distorted Wave Impulse Approximation (DWIA) a method is presented for the calculation of inelastic and charge exchange scattering processes induced by composite particles. The in those reactions often neglected knockon-exchange contributioins are treated exactly. The basic tool is the multipole expansion method which is repeatedly applied to perform multidimensional integrals involved in both the direct and exchange amplitudes. Based on that method a computer code is developed and is applied to examine the recoil and tensor exchange effects for different multipoles. Neglecting those effects 10-30% error shows up in the calculations. A comparative study of the /sup 90/Zr(/sup 3/He,t)- and /sup 90/Zr(p,n)-reactions is then performed at the bombarding energy of 200 MeV per nucleon. It is shown that the (/sup 3/He,t)-reaction excites the collective 1 $\hbar\omega$ - (L=1) - and 2 $\hbar\omega$ - (L=2) - spin-flip modes much more strongly than the (p,n)-reaction. The reason for that is found in the strong surface character of the (/sup 3/He,t)-reaction. It is proved that both the (p,n)- and (/sup 3/He,t)-spectra are nearly background free and represent a linear spin-isospin (σtau)-response of the target nucleus to the probing (p,n)- and (/sup 3/He,t)-fields, respectively. (orig./HSI).

24036 **(KAERC—102/85) On nonaxial nuclear model with central symmetry and excited states of deformed nuclei (2).** (State Committee for Atomic Energy, Pyongyang (D.P.R. of Korea). Research Center for Atomic Energy.). 1985. 7p. (In Korean). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701429.

In this paper the collective excited energy formula for deformed nuclei has been derived, which is dependent only upon two parameters α(nonaxial parameter) and xi. The case $\alpha=0$ corresponds to an axial nucleus and αnot=0 to nonaxial nucleus. In case of xi=0, the formula is identical with the formula of the axial nuclear model. And in case of xi>>1, the formula leads to the "heuristic formula" for the energy level of the axial nuclear model.

24037 **(KFKI—1986-53/A) Heavy ion collisions and anisotropic hydrodynamics.** (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Sep 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701431.

A generalized hydrodynamical equation system was constructed in which the anisotropy of the momentum distribution is added as a new variable. These equations are derived from the moment equations of the relativistic Boltzmann equation where the closure of the set is achieved by assuming a particular class of initial conditions. The equations are then explicitly solved for two uniform interpenetrating hadron streams. The collision cross-sections are the bare hadron cross-sections; the presence of the other hadrons can be simulated by the use of a density and energy density dependent temperature and mass, taken from self-consistent calculations. The results are compared with other theoretical results. It was found that the isotropization occurs sufficiently rapidly for medium energy head-on collisions to reach local thermal equilibrium. 18 refs.; 4 figs.

24038 **(LUIP—8503) Studies of many-particle correlations in proton-nucleus interactions using distributions of rapidity-gaps between particles.** Mangotra, L.K.; Otterlund, I.; Stenlund, E. (Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics). 26 Mar 1985. 10p. (LUNFD6/NFFK—7056-1-9(1985)). NTIS (US Sales Only), PC A02/MF A01. File Number DE87750904.

Many-particle correlations in proton-Emulsion interactions at 400 GeV have been investigated using distributions of rapidity-gaps between particles. We have defined the normalized semi-inclusive rapidity-gap correlation function which is shown to have advantages over the normalized two- particle correlation function. Small, but significant, deviations from zero-correlations are observed in the data.

24039 **(NORDITA—84/46-Prepr.) Skyrmions, dense matter and nuclear forces.** Pethick, C.J. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). Dec 1984. 22p. (CONF-8409225—4-Prepr.). NTIS (US Sales Only), PC A02/MF A01. File Number DE87751240.

From Colloquium on heavy ion collisions: from collective motions to quarks; Cargese, France (2 Sep 1984).

A simple introduction to a number of properties of Skyrme's chiral soliton model of baryons is given. Some implications of the model for dense matter and for nuclear interactions are discussed.

24040 **(NORDITA—85/25-Prepr.) Quantal foundation of the nucleon exchange transport theory.** Randrup, J. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). Jul 1985. 50p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751243.

The central elements of the nucleon exchange transport theory are discussed within a fully quantal framework in order to elucidate the principal characteristics, validity and limitations of the theory. Special consideration is given to the mean rate of energy dissipation and the penetrability coefficient.

24041 **(OUP—83-17) Study of two-body effects in the particle-rotor model.** Henriquez, A. (Oslo Univ. (Norway). Fysisk Inst.). Apr 1983. 89p. NTIS (US Sales Only), PC A05/MF A01. File Number DE87750897.

Some well known difficulties of the particle-core coupling model have been studied. It seems that the inclusion of the full recoil term and an exact diagonalization of the pairing interaction, with state-dependence in the case of actinides, indicate a solution to the following problems: the range of $\Delta N=2$ interaction in the hexadecapole and quadropole deformation planes, the description of the low spin anti-aligned states in /sup 109/Pd, and the Coriolis attenuation factor in the rare earth nuclei and in /sup 235/U.

24042 **(OUP—86-19) First generation of γ-rays from hot nuclei.** Guttormsen, M.; Ramsoey, T.; Rekstad, J. (Oslo Univ. (Norway). Fysisk Inst.). Aug 1986. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750684.

A method to extract first generation γ-ray spectra from nuclear levels at high excitation energy is described. The method that is applied and tested to data from the (/sup 3/He,$\alpha\gamma$) reaction in the rare earth region, is based on the assumption that states populated after the first γ-transition have the same decay properties as states populated directly in the particle reaction at that excitation energy. Some experimental first generation γ-ray spectra are presented.

24043 **Quark-cluster-model predictions for the nuclear Drell-Yan process.** Harindranath, A.; Vary, J.P. (Physics Department, Iowa State University, Ames, Iowa 50011). *Physical Review [Section] D: Particles and Fields;* **34**: No. 11, 3378-3384(1 Dec 1986).

We evaluate the quark-cluster-model predictions for lepton pair production in proton-nucleus, pion-nucleus, and nucleus-nucleus interactions. We examine the issue of a possible ambiguity between the K factor and the probability of six-quark clusters in nuclei. We present predictions for cross sections and cross-section ratios which show substantial sensitivity to different features of the model. The model compares well with the existing data.

24044 **A momentum dependent induced interaction model applied to liquid^{3}He.** Ainsworth, T.L. (Univ. of Arizona, Tucson, AZ). pp 129-138 of Condensed matter theories: Vol. 1. Malik, F.B. New York, NY; Plenum Press (1986). (CONF-8508135—).

From 9. international workshop on condensed matter theories; San Francisco, CA, USA (5 Aug 1985).

This paper describes a generalization of the Babu-Brown induced interaction model. A momentum dependence is included in the induced interaction in order to maintain the antisymmetry of the quasi-particle interaction to preserve the forward scattering sum rule (Pauli principle). In addition to the RPA particle-hole interaction (t-channel) the exchange particle-hole channel (u-channel, induced interaction) is included. The equations which self-consitently sum the one-particle-one-hole reducible diagrams are shown. It is shown that both particle-hole reducible channels are important for calculating the quasi-particle interaction near the Fermi surface and by including both on an equal basis the resultant scattering amplitude is inherently antisymmetric.

24045 **Thermal response of hot nuclei.** Vary, J.P.; Bozzolo, G.; Miller, H.G.; Quick, R.M. (Iowa State Univ., Ames, IA). pp 165-172 of Condensed matter theories: Vol. 1. Malik, F.B. New York, NY; Plenum Press (1986). (CONF-8508135—).

From 9. international workshop on condensed matter theories; San Francisco, CA, USA (5 Aug 1985).

The authors evaluate an effective Hamiltonian (H/sub eff/) in a sequence of model spaces, abbreviated as two-space (0s, 0p and 1s-0d shells), the three-space (two-space plus 1p-0f shell), the four-space (three-space plus 2s-1d-0g shell) and the five space (four-space plus 2p-1f-0h shell). This sequence of model spaces permits one to estimate convergence properties of the finite temperature Hartree-Fock (FTHF) approximation results. For all these calculations all particles are active and only isospin symmetry is insured by requiring that the neutron and proton orbitals are degenerate. Two overall factors, for the kinetic energy and effective interaction terms, respectively are introduced and later adjusted, simultaneously with the oscillator spacing, to achieve the desired rms radius and binding energy for a given nucleus for each choice of model space. The theoretical rationale for the approximate values of these parameters and expected dependence on model space, together with the resulting numerical values are discussed.

24046 **Trinucleon bound states.** Friar, U.L. (Los Alamos National Lab., Los Alamos, NM). pp 213-250 of New vislas in electro-nuclear physics. Tomusiak, E.L.; Caplan, H.S.; Dressler, E.T. New York, NY; Plenum Press (1986). (CONF-850851—).

From NATO advanced study institute on new vistas in electro-nuclear physics; Banff, Alberta, Canada (22 Aug 1985).

Because the technical aspects of the few-nucleon problem tend to obscure the many simple results, the author concentrates on understanding why three-body calculations are done the way they are, in what sense they are complicated, and in what sense they are simple. Electromagnetic interactions are studied involving three nucleons. Three-body forces are examined also. It is noted that in isovector magnetic dipole processes, pion-exchange currents can make sizeable contributions. Contributions from heavy-meson exchange are smaller, because nucleons don't like to overlap at small separations. The dominant meson-exchange effects occur in the isovector current operator, while small (ambiguous) contributions can occur to the charge, isoscalar current, and axial vector current operators.

24047 **Electron scattering from nuclei at several GeV.** Arnold, R.G. (American Univ., Washington, DC). pp 61-100 of New vistas in electro-nuclear physics. Tomusiak, E.L.; Caplan, H.S.; Dressler, E.T. New York, NY; Plenum Press (1986). (CONF-850851—).

From NATO advanced study institute on new vistas in electro-nuclear physics; Banff, Alberta, Canada (22 Aug 1985).

The experiments described are electron scattering measurements from nucleon and nuclear targets using electrons in the GeV energy range. Inelastic scattering is discussed, with an emphasis on deep-inelastic lepton scattering from nuclei and the recently discovered distortion of quark momentum distributions in nuclei, called the EMC effect.

24048 **High nuclear temperatures by antimatter-matter annihiliation.** Gibbs, W.R.; Strottman, D. (Arizona State Univ., Tempe, AZ). pp 419-430 of Antinucleon-and nucleon-nucleus interactions. Walker, C.E.; Goodman, C.S.; Olmer, C. New York, NY; Plenum Press (1985). (CONF-850315—).

From Conference on antinucleon and nucleon-nucleus interactions; Telluride, CO, USA (18 Mar 1985).

The authors investigate the properties of nuclear matter by possibly raising the energy density of a localized region of nuclear material. They consider raising the energy density of some fraction of the nucleus to that of a nucleon, or raising the kinetic energy of the nucleons to a "temperature" of the order of 180 MeV. It proposed to try to create this new form of matter by collisions of heavy ions, but the authors suggest a possible alternative through the use of antiproton beams.

24049 **Antinucleon physics.** Eisenstein, R.A. (Nuclear Physics Lab., Univ. of Illinois, Champaign, IL). pp 467-470 of Antinucleon-and nucleon-nucleus interactions. Walker, C.E.; Goodman, C.E.; Olmer, C. New York, NY; Plenum Press (1985). (CONF-850315—).

From Conference on antinucleon and nucleon-nucleus interactions; Telluride, CO, USA (18 Mar 1985).

One of the basic thrusts of low-energy antinucleon physics is the study of QCD in the low-energy regime. Important features of the ASTERIX experiment are discussed, including the exclusive searches for "glueballs" and other exotic structures such as qqqq or hermaphrodies such as gqq. The author comments on discussions of low-energy p physics which clearly indicate there are many interesting questions requiring investigations.

24050 **(AD-A—175711/1/XAB) New version of the energy-deposition code D-DEP-1: better stopping powers. Final report.** Davisson, C.M.; Manning, I. (Naval Research Lab., Washington, DC (USA)). 6 Oct 1986. 76p. (NRL—8859). NTIS, PC A05/MF A01.

This new version of the E-DEP-1 program uses improved stopping powers that have been developed since the original program appeared. The stopping-power cross sections in the original paper were based on the Thomas-Fermi interatomic potential. The present version uses the elastic stopping power which is based on a much more realistic interatomic potential, and for the inelastic stopping power the phenomenological fit. In addition, some minor corrections have extended the range to higher energies, and three dummy routines with full sets of common statements to allow the user to use the data as he or she sees fit. The present version is consistent with FORTRAN IV and has been tested with both DEC FORTRAN 66 and FORTRAN 77. The Fortran program is included in the report, and the output is given for the sample run used in the original version, but now using this version. Figures show a comparison between the two.

24051 **(CONF-870424—7) Fine-mesh limit of 1D nodal transport equations.** Gelbard, E.M.; Liu, Y.W.H.; Olvey, L. (Argonne National Lab., IL (USA); National Tsing Hua Univ., Hsinchu (Taiwan). Dept. of Nuclear Engineering; Northwestern Univ., Evanston, IL (USA). Dept. of Mechanical Engineering). 1987. Contract W-31109-ENG-38. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006992.

From American Nuclear Society international meeting on advances in reactor physics, mathematics and computation; Paris, France (27 Apr 1987).

Imbedded in multidimensional nodal transport codes is the solution of transverse integrated ID transport equations. Since, in this solution, fluxes on boundaries are DP_1, it is generally assumed that the ID solutions, in the small-mesh limit, approach DP_1 solutions. It will be shown that this is not true. Small-mesh limits of the ID nodal equations will be derived, and it will be shown that these are substantially worse than the DP_1 equations under certain cir-

cumstances. Alternate ID nodal equations (which do have a DP_1 small-mesh limit) are proposed. 2 refs.

24052 (EUR—9762-Vol.1, pp 183-192) **Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev.** Petler, J.S.; Finlay, R.W.; Meigooni, A.S.; Islam, M.S.; Rapaport, J. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The Ohio University Beam Swinger provides a high resolution, low back-ground time-of-flight facility for the measurement of elastic and inelastic neutron scattering. It has been used to obtain a comprehensive set of differential scattering cross sections for ^{12}C, ^{14}N, ^{16}O and ^{40}Ca between 18 and 26 MeV. The elastic cross sections can be used directly to obtain partial kerma factors and, combined with the known total cross sections, provide accurate values for the reaction cross sections. Angular distributions have been measured for inelastic scattering from all the nuclear levels that cannot decay by particle emission thus providing (by subtraction) a limit on the sum of all charged-particle producing reactions. The integrated cross sections for inelastic scattering from some particle-unstable states in ^{12}C are in excellent agreement with the cross sections for three-body breakup obtained by Antolkovic et al. The differential data have been used, together with higher energy proton scattering data to produce energy-dependent optical model parameters for each of these nuclei in the energy range 20-60 MeV. It has been found that the elastic differential cross sections at theta $>$ 100^0 for ^{12}C, ^{14}N and ^{16}O cannot be well described by a spherical optical model. Explicit consideration of coupled-channel effects, and in the case of ^{12}C, deformation of the ground state, improves the agreement between calculation and experiment. Heavy ion recoil kerma factors and reaction cross sections have been obtained for each element and compared with previous calculations and measurements.

24053 (EUR—9762-Vol.1, pp 245-253) **Dose mean lineal energy for computer simulated proton tracks.** Leuthold, G.; Burger, G. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

In the analysis of neutron radiological efficiency, the quantity mean ysub(D) may play a helpful role. As the protons are dominant in the secondary particle spectrum in the majority of neutron exposure cases, in radiation protection as well as radiation therapy, mean ysub(D) was first determinated for protons. Proton tracks were computer simulated by Monte Carlo calculations in the proton energy range from 0.3 - 1.5 MeV in water vapour. From the event structure the proximity functions T(x) were derived. They are defined as weighted sums of energy transfers within spheres of radii $r < = x$ around each event point of a track. For purposes of track analysis one may distinguish four different components: - contribution of ion events only (i) - intra track contribution of Δ-ray tracks (e) - inter track contribution of Δ-ray tracks (e-e) - ion-electron event contribution (i-e). The relative contributions are a function of radius x and of proton energy E. They have been separately calculated and the mean lineal energies have been derived from it. The results are intercompared with calculations based on track models with radial dose profiles.

(Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

A double differential cross-section mixed treatment (DDCS-MT), developed in order to calculate double differential ionization cross-sections (DDCS), had allowed not only to reproduce with a good approximation Δ-ray yields measured in nuclear emulsions along 4- to 12-MeV α particle tracks, but also to interprete quantitatively experimental DDCS of atoms bombarded by heavy charged particles (HCP). It will be shown in this paper that the DDCS-MT can be extended to the case of molecules, like water and hydrocarbons, for ejection energies at least as low as approximatly 10 eV, provided that the binding energies of the molecular orbitals are taken into account, as well as the breaking up of these orbitals in therms of atomic orbitals. Very preliminary attempts to introduce the DDCS-MT in microdosimetric determinations will be mentioned, namely the assessment of the ionization energy loss distribution for protons bombarding water molecules, and of the probability of the number of ionizations produced in a small water sphere by incoming protons.

24055 (EUR—9762-Vol.2, pp 907-916) **Spectral neutron fluence and tissue kerma in collimated neutron beams from Be + d.** Brede, H.J.; Dietze, G.; Schlegel-Bickmann, D.; Kudo, K. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751120. (CONF-8409161—Vol.2).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The neutron production of the Be - d reaction was studied for deuteron energies from 9.4 MeV to 13.3 MeV. Time-of-flight techniques and an NE 213 scintillator detector were used to determine the number, energy and angular distribution of the neutrons emitted from a thick Be target between 0^0 and 40^0 to the direction of the incident deuteron beam. By means of a Monte Carlo code the scattering of neutrons was calculated for different liner materials of a collimator. The influence of the neutron collimator on neutron fluence and standard tissue kerma at a distance of 80 cm from the Be target was evaluated.

24057 **(INIS-mf—10253) Measuring the radial density distribution of light emission around the track of fast ions in nitrogen.** Ibach, T. (Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Elektrotechnik). 1 Aug 1983. 106p. (In German). NTIS (US Sales Only), PC A06/MF A01. File Number DE87751341.

For analysing the emission and stopping of ionization electrons (σ-electrons) emitted by fast ions passing through a gas, the radial density distribution of the light emission of the (0,0) transition of two optical bands in nitrogen have been measured. The systems selected for the epxeriments are the 2nd positive system (2.PS) at 337.1 nm primarily excited by low-energy electrons of about 20 eV, and the first negative system (1.NS) at 391.4 nm excited by faster electrons and simultaneous ionization. The equipment developed for the experiments records the light emission with a telescope-type optical arrangement including interference filters, allowing high local resolution and dynamics of the measured range. The measurements have been carried out at pressures between 0.133 and 13.3 mbar, using photons of energies ranging from 270 keV to 2.8 MeV, helium 3 beams of 270 keV/u and 500 keV/u, and neon beams of 270 keV/u. Abel's inversion applied to the distance functions allows calculation of the spatial light emission density which is normalized for a gas density of 1 g/cm/sup 3/. The profiles of the two bands indicate that the σ-electron spectrum gets harder in outward direction. Next to the beam the impact density decreases faster with increasing ion energy than the stopping power (increasing interaction range of the σ-electrons). With photon beams, about half of the whole light emission in the 1. NS, and of the ionization, is induced by primary interactions of the ion beam. This proportion decreases at constant energy per nucleon with increasing atomic number of the ions as compared with the σ-electrons. The primary σ-emission gets harder with higher atomic numbers.

24058 **(INP—1232/AP) Influence of the thermal neutron energy distribution on results of pulsed measurements with small samples.** Drozdowicz, K. (Institute of Nuclear Physics, Krakow (Poland)). 1983. 151p. NTIS (US Sales Only), PC A08/MF A01. File Number DE87701579.

An approach to the problem of the influence of the thermal neutron energy distribution on results of pulsed measurements from the point of view of bounded, small, two-region systems is presented. A model including the energy effects into the description of the decaying thermal neutron flux in bounded two-region systems is proposed. The consequences of neglecting the influence of the energy distribution are also shown.

24059 **Diffusion-synthetic method for acceleration of linear nodal S/sub n/ calculations.** Khalil, H. (Argonne National Lab., IL). *Transactions of the American Nuclear Society;* **53**: 278-280(1986). (CONF-861102—).

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

Application of the differencing procedures devised by Alcouffe and Larsen to the diffusion-synthetic acceleration of multidimensional nodal S/sub n/ calculations yields difference equations that may not be efficiently solvable and has so far been accomplished only for the lowest order constant-constant (C-C) nodal scheme. An alternative differencing technique has been described in which the spatial approximations applied to the continuous diffusion operator are consistent in the P_1 limit with corresponding approximations made in deriving the nodal S/sub n/ equations. The effectiveness of this technique, which is applicable to any S/sub n/ method, has previously been demonstrated for the C-C and constant-linear (C-L) nodal schemes. Here the author extends the technique to the higher order linear nodal (LN) scheme and demonstrates that the diffusion difference equations obtained can be solved efficiently despite their increased complexity and that the resulting synthetic iteration procedure is stable and rapidly convergent. Very recently, Lawrence developed a different synthetic acceleration method based on an interface-current approach and also applied it successfully to the LN equations.

24060 **Vectorization of three-dimensional general-geometry Monte Carlo.** Brown, F.B. (Knolls Atomic Power Lab., Schenectady, NY). *Transactions of the American Nuclear Society;* **53**: 283-285(1986). (CONF-861102—).

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

A three-dimensional general-geometry Monte Carlo code with continuous-energy physics and extensive tallying treatments has been vectorized. This code is in production use and provides speed-ups of at least 10 over a comparable scalar code. Performance results on the Cyber-205 computer are demonstrated with three-dimensional PWR calculations.

24061 **Low energy electron attenuation length studies in thin amorphous carbon films.** Martin, C.; Arakawa, E.T.; Callcott, T.A.; Ashley, J.C. (Oak Ridge National Lab., TN). *Journal of Electron Spectroscopy and Related Phenomena;* **35**: 307-317(1985). Contract AC05-84OR21400.

The results of experiments on low energy electrons passing through thin amorphous carbon films are reported. For electron energies between 50 and 3000 eV, electron attenuation lengths were determined by electron transmission measurements through carbon films of thicknesses between 81 and 210 A. The density of these amorphous carbon films was also obtained by a sink-float method and found to be 1.90 +/- 0.05 g cm^{-3}. The electron attenuation length for inelastic scattering was found to increase monotonically from approximately 10 to 55 A over the 50 to 3000 eV range. Over the 500-3000 eV energy region, the results are in good agreement with mean free paths calculated using optically measured dielectric functions. 18 references, 4 figures.

24062 **Implicit scheme for calculating time- and frequency-dependent flux limited radiation diffusion in one dimension.** Axelrod, T.S.; Dubois, P.F.; Rhoades, C.E. Jr. (Lawrence Livermore National Lab., CA). *Journal of Computational Physics;* **54**: No. 2, 205-220(May 1984). Contract W-7405-ENG-48.

A flexible and accurate method for solving nonlinear time- and frequency-dependent flux limited radiation diffusion and radiation-matter coupling problems in one dimension is developed. The method is based on converting the set of partial differential equations for the flux-limited multigroup diffusion approximation into a systems ordinary differential equations which are integrated by a generalized stiff equation solver. Unlike previous operator-splitting techniques which can introduce instabilities into the solution or which produce smooth but highly inaccurate solutions, this scheme provides a reliable accurate solution with reduced overall computation effort. The solutions describe both the streaming and diffusion limits of transport theory and are stable with time steps comparable to the changes in physical variables. 20 references, 5 figures.

24064 (EUR—9762-Vol.1, pp 71-86) **Conceptual basis for neutron radiation protection.** Burger, G.; Morhart, A.; Wittmann, A. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The conceptual basis for neutron radiation protection has specific neutron aspect and general radiation protection aspects. As to the first, the rationale of q(L), q(Esub(n)) and finally the risk factors used in the definition of the effective dose equivalent, Hsub(E), are discussed. Using an approach developed by Rossi, an alternative q(L) is assumed and q(Esub(n)) and finally Hsub(E) calculated. General radiation protection aspects concern the definition, introduction and application of operational quantities, which are intended to replace in practice the primary and secondary limited ones. Neutron dose equivalent is not directly measurable, although efforts are now being made to utilize TE-proportional counters, and so at present all quantities have to be defined via calculated fluence-to-dose equivalent conversion functions. Extensive radiation transport calculations have been performed in the past in both anthropoid and regular body phantoms to determine fluence conversion factors for the whole hierarchy of primary limited and operational quantities. Quantities defined in the ICRU-sphere are of special interest. Revised data sets for all relevant quantities will be shown and intercompared. One of the recurrent problems in radiation protection is the difficulty in establishing a unique concept for environmental and individual monitoring. The planned concept of ICRU is critically reviewed in this respect. Finally the implications of the new proposals on the uncertainty in assessing limited quantities under certain exposure conditions in radiation protection practice will be discussed.

24065 (EUR—9762-Vol.1, pp 87-94) **Problems of a consistent assessment of the individual dose in mixed neutron-photon radiation fields.** Wagner, S.R. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The system of dose limitation as set by ICRP refers to two categories of quantities, effective dose equivalent, and mean dose equivalents in particular tissues or organs. As both categories of quantities cannot be measured easily, operational quantities of the

dimension of dose equivalent are introduced, which can be assessed by practical instruments. In area monitoring for neutrons this has to be a quantity defined in an anthropoid phantom. Another quantity serving the same purpose is the dose equivalent as produced at a specified depth in a 30 cm dia soft tissue sphere (ICRU sphere). Such area monitors are calibrated by exposing them to a well defined neutron field of known neutron flux density using fluence to dose equivalent conversion factors as given by ICRP, which take into account the dose equivalent contribution of the heavy charged particles produced by the neutrons as well as the contribution by the neutron capture gamma radiation arising in the phantom. The photon radiation present in a mixed radiation environment in absence of the phantom is assessed separately by an instrument which ideally doses not respond to neutrons. On the other hand, individual monitoring in mixed radiation fields is generally performed separately by photon responding and by neutron responding individual monitors worn on the trunk of the exposed individual. In this case, the photon monitor senses the contribution from the incoming photon radiation and the contribution by photons from neutron capture in the body. Hence it would not be consistent to calibrate the individual neutron monitor by using the same neutron fluence to dose equivalent conversion factors as with the area monitor. However, ICRP gives only the neutron fluence-to total dose equivalent conversion factors.

24066 (EUR—9762-Vol.1, pp 95-105) **Improved operational quantity for neutron radiation protection monitoring.** Siebert, B.R.L.; Hollnagel, R.; Jahr, R. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The relation between operational and primarily limiting quantities is discussed on the basis of a procedure for calibrating individual dosemeters in which allowance is made for different directions of the incident radiation. Accepting Hsub(eff) as the primarily limiting quantity the suitability of H_{10} (dose equivalent on the principal axis of the ICRU sphere at a depth of 10 mm) or Hsub(sph) (weighted sum depth of dose equivalents in the ICRU sphere) as operational quantities for individual neutron monitoring is examined as a function of energy and direction of incidence of the radiation. It is concluded that Hsub(sph) appears to be suitable.

24067 (EUR—9762-Vol.1, pp 107-119) **New trends in the ICRU sphere.** Morstin, K.; Kawecka, B.; Booz, J. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltfroschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

A space transformation has been applied that enables the transport equation to be efficiently solved for spheres exposed to radiations of almost arbitrary angular distribution. Depth dose distributions in the ICRU sphere have been calculated with the 1-D ANISN transport code for neutron energies from thermal up to 20 MeV and for photons up to 15 MeV. Several irradiation geometries are considered. For deep-penetrating radiations, maximum possible dose equivalent index significantly exceeds Hsub(10) star.

24068 (EUR—9762-Vol.1, pp 123-132) **Estimation by means of albedo fluence calculations of the response of individual neutron dosemeters fixed to phantoms.** Hollnagel, R.; Jahr, R.; Siebert, B.R.L. (Institut fuer Strahlenschutz, Gesellschaft fuer Stranlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

No individual neutron dosemeter currently available can meet all of the requirements needed for satisfactory dose assessments. However, a combination of thermoluminescent albedo dosemeters and etched plastics (track detectors) seems to attract general interest. This paper presents calculations of the readings of such detectors for various exposure conditions. Albedo and track etch detectors attached to the ICRU sphere phantom are examined. The influence of the phantom on the reading is discussed and comparisons of the ICRU phantom and the anthropomorphic MIRD phantom are also presented.

24069 (EUR—9762-Vol.1, pp 133-145) **Neutron and photon fluence-to-dose conversion factors for active marrow of the skeleton.** Kerr, G.D.; Eckerman, K.E. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Most estimates of absorbed dose in various organs of the body are derived from radiation transport calculations in anthropomorphic phantoms. The homogenized skeleton is adequate for radiation transport purposes since it provides correct scattering and absorption properties. However, the effects of the microstructure of bone must be considered in deriving realistic estimates of the absorbed dose in soft tissues of the skeleton, particularly the active (red) marrow which is one of the most radio sensitive tissues of the body. We have investigated the effects of the microstructure of bone on absorbed dose in active marrow for a variety of active marrow sites in the skeleton and a wide range of neutron and photon energies. These studies indicate clearly that the presence of bone alters the absorbed dose in active marrow from photons which energies less than several hundred keV and neutrons with energies greater than several MeV, but the results cannot be applied generally. We avoid the assumption of a special geometry by using measured chord-length distributions to represent the microstructure of the trabecular bones containing the active marrow (e.g., parietal bone, lumbar vertabra, cervical vertebra, iliac crest, rib, and both the head and neck of the femur). Results of our calculations for neutrons and photons with energies up to 20 MeV are provided as fluence-to-dose conversion factors, for application in radiation transport calculations of absorbed dose in active marrow from photons and neutrons extrenally incident on body, and photons produced by neutron interactions within the body. Our results suggest that the neutron and photon fluence-to-dose conversion factors for lumbar vertebra can be used as a representative example for all active marrow sits except those in parietal bone of the skull.

24070 (EUR—9762-Vol.1, pp 147-156) **Field measurements of neutron energy and angle spectral distribution and their interpretations in terms of relevant radiological protection quantities.** Bartlett, D.T.; Bardell, A.G. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Measurements have been made of the neutron energy and angular distributions at eight and nine sites respectively in a nuclear facility. The energy spectral distributions were measured using the multisphere technique. The results have been used to calculate the response of a type 0075 survey meter and to compare values of the quantities ambient dose equivalent, effective dose equivalent and individual dose equivalent, penetrating.

24071 (EUR—9762-Vol.1, pp 157-168) **Neutron occupational exposure and radiological protection.** Wittmann, A.; Burger, G.; Kollerbaur, J.; Schraube, H. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

A set of 76 stray and leakage spectra of neutrons partly measured and partly theoretically assessed in nuclear reactor and accelerator environments have been compiled. 31 are indirectly determined by own multisphere measurements in the experimental hall of a swimming pool research reactor. For all spectra and several assumed exposure conditions (A-P and isotropic radiation inci-

dence) various quantities relevant in radiation protection have been determined. This concerns the effective dose equivalent, the newly recommended operational quantity H_{10}, as defined in the ICRU-sphere, and finally the expected reading of albedo dosemeters, some Bonner spheres and a standard Anderson and Braun rem counter.

24072 (EUR—9762-Vol.1, pp 171-181) **W-value measurements for protons in tissue-equivalent gas and its constituent gases.** Thomas, D.J.; Burke, M. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Absolute measurements of W (the mean energy required to create an ion pair) have been performed for protons with energies between 1.2 MeV and 3.5 MeV for tissue-equivalent gas, and its constituent gases i.e. methane, carbon-dioxide, and nitrogen. The apparatus consisted essentially of two parallel plates enclosed within a vessel containing the gas of interest. Protons entered the measurement chamber through a thin Mylar window and were stopped in the gas region between the plates. A high voltage applied to one plate enabled the ion current to be measured from the opposite plate. The number of protons which produced the measured integrated charge was obtained simultaneously by amplifying signals from the high voltage plate and counting pulses resulting from individual protons. Results for W are somewhat lower than those suggested by ICRU Report 31. For tissue-equivalent gas there have been previous measurements in this energy region by Rohrig and Colvett, and by Larson, and the present measurements are about 2% lower.

24073 (EUR—9762-Vol.1, pp 193-201) **Measured neutron carbon kerma factors from 14.1 MeV to 18 MeV.** Deluca, P.M.; Barschall, H.H.; Haight, R.C.; McDonald, J.C. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

For A-150 tissue-equivalent plastic, the total neutron kerma is dominated by the hydrogen kerma. Tissue kerma is inferred with reasonable accuracy by normalization to the kerma factor ratio between tissue and A-150 plastic. Because of the close match in the hydrogen abundance in these materials, the principal uncertainty is due to the kerma factors of carbon and oxygen. We have measured carbon kerma factor values of 0.183 +- 0.015 10^{-8} cGy cm^2 and 0.210 +- 0.016 10^{-8}cGy cm^2 at 14.1-MeV and 15-MeV neutron energy, respectively. A preliminary value of 0.297 +- 0.03 10^{-8}cGy cm^2 has been determined at 17.9 MeV. A recent microscopic cross section measurement of the (n,n'3α) reaction in carbon at 14.1-MeV energy gives a kerma factor of 0.184 +- 0.019 10^{-8}cGy cm^2 in agreement with the present result.

24074 (EUR—9762-Vol.1, pp 203-212) **Determination of kerma in A-150 plastic for various neutron fields using three different methods.** Schlegel-Bickmann, D.; Dietze, G.; Guldbakke, S.; Buehler, G.; Schuhmacher, H. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The kerma in the tissue-equivalent material A-150 plastic was determined in monoenergetic neutron fields with neutron energies of 13.9, 15.0, 17.0 and 19.0 MeV and in a collimated neutron beam from Be + d (12.75 MeV) with a broad neutron energy distribution. Three different methods were used. The twin-detector method with a neutron-sensitive and a neutron-insensitive ionization chamber, and a single-detector method with a tissue-equivalent proportional counter were used to measure the photon and neutron kerma components in A-150 plastic. The third method was based on the determination of the spectral neutron fluence at the point of interest and the application of fluence to kerma conversion factors. With the kerma and the spectral neutron fluence data, kerma factors of A-150 plastic were determined. The measured kerma values agreed within 4.5% except for neutons at 19 MeV. At this energy the experimentally determined A-150 plastic kerma factor is about 11% less than the calculated value obtained from the literature. In the collimated neutron beam the kerma values determined by different methods agreed within 3.3%.

24075 (EUR—9762-Vol.1, pp 213-224) **Critical evaluation of neutron kerma factors using theoretical and experimental ionization yield spectra.** Schuhmacher, H.; Menzel, H.G.; Coyne, J.J. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Ionization yield calculations were performed and compared to measurements for 13.9, 15.0, 17.0 and 19.0 MeV. The measured spectra were normalized to unit neutron fluence and the calculations take account of the neutron energy distributions at the detector positions. The computer code was tested by comparison with experimental data at 0.57, 2.07 and 5.25 MeV because physical data are well known at these energies. Total kerma for 19 MeV as well as kerma due to alpha-particles for 17.0 and 19.0 MeV are significantly lower for the measured data. There is clear evidence that the ^{12}C(n,n'3α) cross section for 17 and 19 MeV used in the calculations and in kerma evaluations is too high.

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Transport of neutral primaries is frequently ignored in microdosimetric calculations, which is often bound to produce misleading results for deepseated points of interest. The paper briefly describes the application of combined Ssub(N) (for neutral primaries) and CSDA (for charged secondaries) transport calculations for evaluating correctly energy release and deposition in extended media exposed to neutrons. Calculations have been performed for the ICRU sphere and for some proportional counters, in a wide range of incident neutron energies. Results are compared with corresponding Monte Carlo calculations and with experimental event-size spectra. For most of the investigated cases, results are strongly influenced by primary transport effects. Thus, propagation of neutrons and the related gamma-ray production must not be neglected, neither when simulating responses of dosemeters and microdosimetric counters nor when evaluating radiation effects deep in tissue.

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Recent calculations of event size spectra for neutrons use a continuous slowing down approximation model for the energy losses experienced by secondary charged particles (protons and alphas) and thus do not allow for straggling effects. Discrepancies between the calculations and experimental measurements are thought to be, in part, due to the neglect of straggling. A tractable way of including stochastics in radiation transport calculations is via the Monte Carlo method and a number of efforts directed toward simulating positive ion track structure have been initiated employing this technique. Recent results obtained with our updated and extended MOCA code for charged particle track structure are presented here. Major emphasis has been on calculating energy deposition and ionization yield spectra for recoil proton crossers

since they are the most prevalent event type at high energies (>99% at 14 MeV) for small volumes. Neutron event-size spectra can be obtained from them by numerical summing and folding techniques. Data for ionization yield spectra are presented for simulated recoil protons up to 20 MeV in sites of diameters 2-1000 nm.

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

At higher neutron energies calculations using the analytic method yield microdosimetric spectra in which the proton peak is narrower and shifted in peak energy when compared to experiment. This difference is usually attributed to the neglect of straggling in the calculation. In order to extend our calculational capability to this situation, we have written a Monte Carlo neutron energy deposition code which includes straggling of the energy depositions by charged particles in the sensitive volume. As a first consistency check, Monte Carlo calculations without straggling have been compared with the analytic method, and found to agree within the statistics of the Monte Carlo program. For thin sensitive volumes for which the Landau distribution should be appropriate, we are using the Monte Carlo code to calculate lineal energy (y) distributions with proton straggling included for energies up to 15 MeV. Comparisons to experiment will be made of the Monte Carlo method with straggling and the analytic method without straggling. One of the most interesting by products of this work is that it has shown us a relatively simple way to include Landau straggling in the analytic calculational method, greatly increasing the power of that method. We are now programming the inclusion of straggling into the analytic method code.

24079 (EUR—9762-Vol.1, pp 437-446) **Studies of dose as a function of depth in water-filled phantoms exposed around the CERN accelerators.** Fasso, A.; Gaborit, J.C.; Hofert, M.; Marchal, H.; Stevenson, G.R. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

In order to confirm the appropriateness of the quantity H_{10} for assessing dose equivalent in the stray radiation fields around the multi-GeV proton accelerators of CERN, a series of experiments were undertaken in which thermoluminescent dosimeters (LiF TLD-700) were exposed in water-filled phantoms. Attempts were made to separate the dose from high-LET components of the field by reading separately the different peaks in the thermoluminescent response curve of the TLD. In general, the results confirm the theoretical predictions that the dose equivalent is a maximum at or near the surface of the phantom, and that the dose equivalent at a depth of 10 mm is a suitable quantity for assessing radiological hazards in the experimental areas and outside the shielding of high-energy proton accelerators.

24080 (EUR—9762-Vol.1, pp 447-457) **Neutron depth dose calculations and measurements in an elliptical phantom for radiation protection purposes.** Palfalvi, J. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The measurements of the radiation field in a phantom, with regard to the neutron component and the contaminating gamma-radiation, are essential for radiation protection and radio-therapy purposes. Depth-dose and neutron spectrum measurements and calculations have been carried out using an elliptical, water-filled phantom for total-body exposures from large neutron sources with long Source to phantom Surface Distances (SSD)s to simulate broad parallel beams of from point like sources with different SSDs as well as using collimated neutron beams of various field sizes. The calculations were performed by Monte Carlo codes; for the measurements, activation, thermoluminescent (TL) and solid state nuclear track detectors were used. Although the details of the mathematical and measuring procedures have been published earlier, they are summarized in form of a flowchart. The results of the 4 years long work are briefly outlined and illustrated by plots and tables.

24081 (EUR—9762-Vol.1, pp 553-561) **Multisphere spectrometry of the neutron field due to a D_2O moderated ^{252}Cf-source in a calibration room.** Harrison, K.G.; Hunt, J.B. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Measurements are reported of the variation of multisphere count-rates as a function of distance from a D_2O moderated californium spontaneous-fission neutron source in a large calibration room. The measurements have been analysed to give the relative contributions in dose-equivalent rate at different distances due to the unscattered source neutrons and the inscattered neutrons. Further analysis of the count-rate data indicates that the source spectrum may be significantly different from published calculations.

24082 (EUR—9762-Vol.1, pp 563-574) **Spectral analysis of some fission neutron sources with the SOHO code from Bonner sphere data.** Zaborowski, H.L. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. (In French). NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

For several tests fission neutron sources particularly ^{252}Cf bare and D_2O moderated, we present some spectral analysis results obtained with the new iterative code SOHO from BONNER spheres data. The approximative solutions are obtained upon discretization of the Fredholm equation of the first kind whose Resolution Function is experimentally known and mathematically defined by the Log-Normal Hypothesis given in our previous reports CEA-N-2241 (1981) and CEA-R-5181 (1982). The iterative procedure solve systems of non-exact homogeneous linear equations QX = e (by optimum liquidation of the residuals esub(i)) with positivity constraint and absolute convergence, leading to an appropriate physical solution with a relative error in our tests typically of the order of a fraction of one percent for the INPUT - OUTPUT Data. For the applications to Health Physics the SOHO Code has been programmed for use with a HP-41 CV calculator.

24083 (EUR—9762-Vol.1, pp 575-582) **Measurement of the neutron source strength ratio of the D_2O-moderated ^{252}Cf-source to that of the bare ^{252}Cf-source.** Hunt, J.B.; Kluge, H.; Rasp, W. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The D_2O-moderated californium spontaneous fission source consists of a 30 cm^2 diameter spherical stainless steel tank filled with heavy water (D_2O), and covered with a cadmium shell to prevent thermal neutrons leaking from the assembly. The physically small bare californium source is positioned at the sphere centre. In order to calibrate neutron personnel dosemeters using this source, knowledge of both its neutron spectrum and its neutron emission rate is required in order to calculate the dose equivalent rate at the irradiation position. The leakage spectrum has been calculated, using Monte Carlo techniques by Ing and Cross, down to 1 eV. Eisenhauer has estimated the spectrum from the cadmium cut-off energy up to 1 eV. Although it is relatively simple to absolutely calibrate the emission rate of a bare californium source, it is practically impossible to use any of the conventional techniques for the moderated source. An obvious way to obtain the emission rate of

such a source is to know the ratio of the bare to moderated source emission rates. A series of measurements, made at both institutes, have been made in order to determine this source emission rate ratio. The final evaluated result of (0.918 +- 0.027) is slightly higher than the value of 0.885 predicted by the Monte Carlo calculations.

24084 (EUR—9762-Vol.1, pp 597-606) **Monoenergetic neutrons of energies from 0.5 keV to 40 keV via the reaction $^{45}Sc(p,n)^{45}Ti$.** Cosack, M.; Lesiecki, H.; Hunt, J.B. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The reaction $^{45}Sc(p,n)^{45}Ti$ has been investigated for the production of monoenergetic neutrons in the low keV region. The cross section of the reaction has several isolated, narrow resonances (line width less than 0.5 keV), which makes it possible to produce monoenergetic neutrons from 0.5 keV to 40 KeV. This source was found to be suitable for calibrating radiation protection instrumentation.

24085 (EUR—9762-Vol.1, pp 607-616) **Calibration of neutron survey meters over the energy range from 1 to 30 keV with accelerator produced monoenergetic neutrons.** Hunt, J.B.; Cosack, M.; Lesiecki, H. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The $^{45}Sc(p,n)^{45}Ti$ reaction has been used to calibrate two commercially available, portable neutron dose equivalent meters over the neutron energy range from 1 to 27 keV. These devices always over-respond in this energy range. The measured fluence rate responses and the calculated over responses for both a spherical and a cylindrical survey meter as a function of neutron energy are given, and compared with the few previously published results.

24086 (EUR—9762-Vol.1, pp 617-628) **Investigation of room scattered neutrons and their importance for the calibration of albedo dosemeters.** Singh, D.; Piesch, E.; Burgkhardt, B. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen- und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

In routine monitoring the energy response of personnel dosemeters is such that there is a need for a more or less sophisticated field calibration of dosemeters in each stray neutron field. Survey meters used as a reference for the actual dose equivalent as well as albedo dosemeters are highly energy dependent and therefore sensitive to room scattered neutrons. In contrast to the standard calibration technique with the aim of scatter free calibration conditions, the field calibration has to take into account the total dosemeter reading and the actual dose equivalent without subtracting the contribution of room return neutrons. For the purpose of field calibrations the scattered neutron component has been investigated in the environment of a Cf-252 neutron source as a function of source distance and at different heights above floor using the Anderson-Braun counter, the 30 cm polyethylene sphere and albedo neutron dosemeters. Differences in estimating the source detector constant using the shadow-cone method and the semi-empirical method recommended by Eisenhauer and Schwartz are explained by detector characteristic effects. On the basis of experimental results the paper discusses the room scattered component of the detector reading, the differences in calibration factors derived from standard, routine and field calibrations as well as the general aspects of field calibration in personnel monitoring.

24087 (EUR—9762-Vol.1, pp 629-636) **Comparison of the filtered-neutron beams at the NBS and PTB reactors by calibrating a spherical rem meter.** Alberts, W.G.; Schwartz, R.B. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Two filtered-neutron beam facilities at the NBS and at the PTB providing quasi-monoenergetic beams of 2 keV, 24.5 keV and 144 keV are in use for radiation protection instrument calibration. Measurements are described which were performed to investigate the properties, and compare the calibrations, of these beams at both installations. A 20.8 cm diameter spherical rem counter and an 11 cm diameter sphere served as transfer instruments. The neutron current in the beams was determined with the respective methods in use at either facility. A filter-difference method was used to determine the contribution of high-energy neutron contamination to the count rate of the instruments. The responses of the instruments to the quasi-monoenergetic neutrons at both institutes are compared.

24088 (EUR—9762-Vol.1, pp 637-640) **Status of filtered neutron beam studies.** Harvey, J.R.; Mill, A.J. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751063. (CONF-8409161—Vol.1).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Studies in the field of filtered neutron beams undertaken prior to 1981 are briefly reviewed. Since 1981 the uranium filter has been studied in more detail and calculations have been made which relate to boron-neutron capture therapy. Further published work has confirmed theoretical predictions of the cross sections of various single isotopes which could be used as low energy neutron filters. A meeting of specialists in 1983 confirmed an interest in filtered neutron beams in many disciplines and recommended that a working party be set up to identify and promote developments in the field.

24089 (EUR—9762-Vol.2, pp 1061-1071) **Total absorbed dose variations in different phantom materials of different neutron beam qualities.** Vynckier, S.; Mijnheer, B.J.; Rassow, J. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751120. (CONF-8409161—Vol.2).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Percentage depth-dose data and output factors were studied for different phantom materials and different neutron beam qualities. In order to correct percentage depth-dose data from one phantom material to another, experimental and theoretical scaling factors (SF) are compared for different neutron beam qualities. The theoretical scaling factors are based on mean free path calculations and carried out at Fermilab, while the experimental scaling factors were collected from different European neutron therapy centers by means of a questionnaire. When comparing both scaling factors, for different phantom materials relative to water, diffences up to 10% were observed. In order to investigate these differences, SF/rho has been studied as a function of the H-concentration by mass, with rho being the mass density of the phantom material. It can be concluded that due to the uncertainty in the average total cross-sections of C and O experimental scaling factors will be more accurate than calculated values. A comparison of the absolute value of the absorbed dose at calibration depth (5cm) in a particular material relative to water shows a nearly linear variation with neutron energy. Determination of the output factor using these data and percentage depth-dose data yielded differences for polystyrene and TE-liquid which varied less than 3% for neutron beam qualities varying between d(14) + Be and p(65) + Be.

24090 (EUR—9762-Vol.2, pp 1087-1096) **Effect of using air in tissue-equivalent ionization chambers for the measurement of fast neutron absorbed dose distributions in phantoms.** Parnell, C.J.; Page, B.C.; Vynckier, S. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751120. (CONF-8409161—Vol.2).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Dosimetry of fast neutron beams is undertaken most frequently with tissue-equivalent ionisation chambers filled with tissue-equivalent gas. However, measurements of absorbed dose distributions in a phantom are frequently carried out with air instead of tissue-equivalent gas. Under these conditions the signal from the air-filled chamber relative to that from a chamber filled with tissue-equivalent gas varies with chamber volume, field size, depth in the phantom and neutron beam energy. Consequently isodose distributions measured with air-filled chambers could be in error. For example, with the dose normalised at 5 cm deep, the use of a 0.1 cc chamber would underestimate the surface dose by 1% and overestimate doses at greater depths by up to 1% for a d(16)+Be beam. Larger errors occur for larger chambers but the errors decrease with increasing beam energy. It is suggested that the errors are due to variations in neutron interactions in the gas particularly at low energies.

24091 (EUR—9762-Vol.2, pp 1107-1118) **Neutron-beam depth-dose dosimetry and spectrometry in water phantom using SSNTDS and multigroup transport calculations.** Petoussi, N.; Durrani, S.A.; Fremlin, J.H.; Mast, H.U. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751120. (CONF-8409161—Vol.2).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

The aim of our work is to investigate the production and energy transfer of charged particles produced by fast-neutron interactions with tissue equivalent materials. For that purpose, we have used two different approaches: an experimental one, using Solid State Nuclear Track Detectors (SSNTDs) and a theoretical one using multigroup transport calculations. For the experiments, the set-up of Hammersmith Hospital, London, was utilized which is currently used for neutron radiotherapy treatment. The polymeric SSNTDs (CR 39, LR 115 and Lexan) were mounted in different positions, both on and off the beam axis and at various depths, in a cubic water phantom. The track densities, produced in each type of detector through the interactions of neutrons with the constituents of both water and plastics themselves were measured. Using a MORSE-H Monte Carlo code, in conjunction with a 46 group cross-section library, the energy-dependent and -independent neutron fluences were calculated at various positions within the above phantom. This was done by simulating all the important details of the experiment. From the neutron spectrum and the response functions taken from the same library, the numbers of (n,p), (n,α) and H and O elastic-scattering reactions as well as the dose delivered by each of charged particles were calculated. The two methods were compared and found to be in good mutual agreement.

24092 (EUR—9762-Vol.2, pp 1227-1235) **International fluence rate intercomparison for 2.5, 5.0 and 14 MeV neutrons.** Liskien, H.; Lewis, V.E. (Institut fuer Strahlenschutz, Gesellschaft fuer Strahlen-und Umweltforschung, Muenchen, Germany, F.R.). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751120. (CONF-8409161—Vol.2).

From 5. symposium on neutron dosimetry; Munich, F.R. Germany (17 Sep 1984).

Fluence determinations for 2.5, 5.0 and 14 MeV neutrons as performed in standard laboratories have been compared. Two methods of intercomparison were used: One is based on the determination of a γ-rate ratio between ^{118}Insup(m) as induced by fast neutrons in an indium sample on one hand and ^{15}Cr from a calibrated source on the other hand and is used at all energies. The second method is restricted to 14 - 15 MeV neutrons and is based on measuring the ^{92}Nbsup(m) γ-activity induced in a niobium sample. Results show that the uncertainty contribution from the transfer methods does not essentially increase the overall uncertainty and that there is generally consistency.

24093 **(IAN-SR—9) Radiological security for industrial radiography.** Montoya G, M. (Instituto de Asuntos Nucleares, Bogota (Colombia). Seguridad Radiologica). Apr 1985. 61p. (In Spanish). NTIS (US Sales Only), PC A04/MF A01. File Number DE87701519.

This report comprises the basic notions of nucleonics, simple calculations for point sources, X-rays, calculations for coatings, standards for radiation protection and industrial radiography instruments. The preceding sums up with the biological effects of ionizing radiation. This is a guide for people who wish to pass examinations, to get the license for radiological safety, for operators on gamma-graphic sources, which work in the country. It is a requirement for work with this kind of radioactive sources.

24094 (INIS-mf—10581, pp 168-170) **Dose equivalent distributions in the AAEC total body nitrogen facility.** Allen, B.J.; Bailey, G.M.; McGregor, B.J. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). Nov 1985. NTIS (US Sales Only), PC A13/MF A01. File Number DE87701623. (CONF-851194—).

From 4. nuclear techniques of analysis conference; Lucas Heights, Australia (6 Nov 1985).

The incident neutron dose equivalent in the AAEC total body nitrogen facility is measured by a calibrated remmeter. Dose equivalent rates and distributions are calculated by Monte Carlo techniques which take account of the secondary neutron flux from the collimator. Experiment and calculation are found to be in satisfactory agreement. The effective dose equivalent per exposure is determined by weighting organ doses, and the potential detriment per exposure is calculated from ICRP risk factors.

24095 **(SIS—1986:8) Natural radioactivity and cancer risk.** Baarli, J. (Statens Inst. for Straalehygiene, Oslo (Norway)). 1986. 26p. (In Norwegian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87750901.

The report is a review of physical and biological parameters important in the calculation of the risk for cancer induction by natural radioactivity. Based on cited assumptions, natural radioactivity may cause 375 to 530 cases of cancer in Norway per year.

24096 **Code system to compute radiation dose in human phantoms.** Ryman, J.C.; Cristy, M.; Eckerman, K.F.; Davis, J.L.; Tang, J.S.; Kerr, G.D. (Oak Ridge National Lab., TN). *Transactions of the American Nuclear Society;* **53**: 37-38(1986). (CONF-861102—).

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

Data derived from radiation transport calculations in a mathematical model of the body are widely used for organ dose estimation in nuclear medicine and radiation protection. The Monte Carlo photon transport code ALGAM and a code using Monte Carlo integration of a point kernel, developed at Oak Ridge National Laboratory (ORNL) in the late 1960s, have been the source of dosimetric data used worldwide. These codes have been revised to incorporate human phantom models for an adult female, juveniles of various ages, and a pregnant female at the end of the first trimester of pregnancy, in addition to the adult male used in the earlier codes. An analysis code has been developed for deriving recommended values of specific absorbed fractions of photon energy. This paper describes the computer code system and calculations methods developed at ORNL, with emphasis on recent improvements in the methods.

24097 (AD-A—175841/6/XAB) X-ray flash crystallography to study directed energy transfer in materials. Technical report, 9 July 1985-9 May 1986. Hailey, C.J. (KMS Fusion, Inc., Ann Arbor, MI (USA)). 19 May 1986. 86p. NTIS, PC A05/MF A01.

This report describes both theoretical, computational and experimental efforts to develop a technique called x-ray flash crystallography (XRFC). In XRFC, time-dependent x-ray diffraction from a crystal is monitored before, during, and after the arrival of an intense, short-pulse-length infrared (IR) laser beam. The IR beam rapidly heats the crystal to high temperature. This induces temperature-dependent changes in the crystals form factor which change the x-ray reflectivity of the crystal; this is just the well-known Debye Waller effect. The temperature-sensitive effects are incorporated into a model used to predict the change in x-ray reflectivity as a function of temperature; the temperature rise itself is determined by a knowledge of the energy-deposition profile, and perhaps the dynamics of the lattice heating. This model then allows the extraction of the time-dependent temperature from the time-dependent x ray reflectivity which is measured. Using x-rays as the probe, rather than an optical probe, ensures that the temperature measured is truly that of lattice. It also avoids contamination of the data due to electron-hole plasma related changes in the optical reflectivity.

24098 (CONF-861247—2) Simulation of the roughness of the border of a molecule. Ramirez, R.; Schneider, M.; Rahman, A.; Schuller, I.K. (Universidad Catolica de Chile, Santiago. Facultad de Fisica; Argonne National Lab., IL (USA)). Feb 1987. Contract W-31109-ENG-38. 8p. (In Spanish). NTIS MF A01; 2; GPO Dep. File Number DE87007044.

From 5. simposio Chiceno de Fisica; Santiago, Chile (18 Dec 1986).

We have solved, using molecular dynamics techniques, a model which consists of a 487-particle movable overlayer on an infinite rigid substrate. The interaction J_1 between the boundary and interior atoms of the overlayer is weaker than those between interior atoms. We have found that the roughness of the border of the overlayer increases with increasing temperature and with decreasing J_1, contrary to the interpretation of Kolaczkiewicz and Bauer of their experiment of an overlayer of Au on a W substrate. We also argue that the Kolaczkiewicz-Bauer claim that their experimental setup is a realization of the Abraham model for the 2D ferromagnetic Ising model, has to be revised.

24099 (CONF-870155—2) Energy loss and scattering of subexcitation electrons in SiO_2. Ashley, J.C.; Ritchie, R.H.; Crawford, O.H. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006619.

From 10. Werner Bradt workshop on penetration phenomena: dynamic actions of energetic probes with condensed matter; Alicante, Spain (7 Jan 1987).

For electrons with energies below the band gap energy of ~ 9 eV in SiO_2, energy loss or gain occurs through phonon emission or absorption. Coupling to the longitudinal optical (LO) modes has been considered by several workers in connection with "electron-runaway" and subsequent "breakdown" when high electric fields are applied to this insulator. The important role played by acoustic phonon modes in predicting the breakdown field in SiO_2 was recently discussed by Fischetti and Fischetti, et al. following the theoretical formulations described by Sparks, et al. We have re-examined these interactions and evaluated the energy loss per unit pathlength and transport mean free path to aid in a qualitative description of the behavior of subexcitation electrons in SiO_2. For example, energy losses and angular deflections experienced by subexcitation electrons in matter are very important in establishing whether geminate recombination occurs between an ejected electron and its parent ion in radiation physics. The response of solid-state devices to ionizing radiation is determined in part by recombination processes, which in turn may depend importantly on the kinds of cross sections that we consider here. 11 refs., 6 figs.

24100 (CONF-870224—3) Cluster emission from a molybdenum surface. Husinsky, W.; Pellin, M.; Calaway, W.; Burnett, J.; Schweitzer, E.; Young, C.; Gruen, D. (Argonne National Lab., IL (USA)). 16 Feb 1987. Contract W-31109-ENG-38. 3p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006989.

From 2. topical meeting on microphysics of surfaces, beams and adsorbates; Santa Fe, NM, USA (16 Feb 1987).

Yields of neutral and ionized Mo clusters emitted from a Mo surface during ion beam bombardment have been measured. Yields of neutral Mo_2 and Mo_3 were obtained using resonance and nonresonance ionization spectroscopy. The yields of ionized atoms and clusters were obtained by SIMS.

24101 (IC—86/149) Instabilities in the microwave GaAs-IMPATT diode amplifiers. Seddik, M.M. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701520.

Instabilities of the IMPATT diode amplifiers under large signal drive are investigated both theoretically and experimentally. Parametric oscillations observed at the subharmonics and the power limitations during the operation of the diode as an amplifier are explained. The method of monitoring the parametric oscillations is discussed. The non linear properties of the avalanche process of the GaAs IMPATT diode is used for parametric amplifications. The gain of the frequency conversion and its relation to the pumping level is considered. A Read-Type GaAs diode is examined at X-band frequencies in a microwave reflection amplifier. 3 refs, 1 fig.

24102 (IC—86/150) Unconditionally stable microwave Si-IMPATT amplifiers. Seddik, M.M. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701521.

The purpose of this investigation has been the development of an improved understanding of the design and analysis of microwave reflection amplifiers employing the negative resistance property of the IMPATT devices. Unconditionally stable amplifier circuit using a Silicon IMPATT diode is designed. The problems associated with the design procedures and the stability criterion are discussed. A computer program is developed to perform the computations. The stable characteristics of a reflection-type Si-IMPATT amplifier, such as gain, frequency and bandwidth are examined. It was found that at large signal drive levels, 7 dB gain with bandwidth of 800 MHz at 22,5 mA was obtained. 9 refs, 2 figs.

24103 (IC—86/187) Diffusion-limited aggregation with long range force. Huang Yun; Lu Jiagang; Wang Liangyu; Zhao Huimin. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 5p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701533.

The Diffusion-limited aggregation model with long range force is investigated. Single particles are moved under the control of Brownian motion and drift motion produced by regular centrical long range force. The computer simulations under this condition have been studied in detail in two-dimension and the results are compared with properly electrolytic deposition experiments. 5 refs, 5 figs, 1 tab.

24104 (IC—86/197) Orbital removal method for the neutral vacancy in semiconductors. Bashenov, V.K.; Kardashev, D.L.; Marvakov, D.I. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701537.

A study of the orbital removal method for vacancy states in semiconductors is presented. It is shown that the bound and resonance states are zeroes of the local perfect-crystal Green function. We suggest that the generalized localized orbitals generate a vacancy potential, when the atom has been removed from the lattice site, which leads to the appearance of a bound state. This is demonstrated for diamond. 8 refs, 1 fig.

24105 **(IC—86/203) Temperature and pressure dependent osmotic pressure in liquid sodium-cesium alloys.** Rashid, R.I.M.A. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701542.

The evaluation of the osmotic pressure in terms of the concentration fluctuations of mixtures and the equations of state of the pure liquids is considered. The temperature and pressure dependent experimentally measured concentration-concentration correlations in the long wavelength limit of liquid sodium-cesium alloys are used to demonstrate the appreciable dependence of the temperature and pressure on the osmotic pressure as a function of concentration. Introducing interchange energies as functions of temperature and pressure, our analysis is consistent with the Flory model. Thus, a formalism for evaluating the state dependent osmotic pressure is developed and our numerical work is considered to be an extension of the calculations of Rashid and March in the sense that a temperature and pressure dependent interchange energy parameter that more closely parameterizes the state dependent concentration fluctuations in the liquid alloys, is used. 15 refs, 2 figs.

24106 **(IC—86/208) Effect of asymmetry on resonant tunneling.** Garcia-Calderon, G. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701544.

Resonant tunneling experiments on multibarrier coupled heterostructures probe the quasistationary nature of the states of the corresponding one dimensional potential. This work considers the effect of asymmetric one dimensional multibarrier potentials on resonant tunneling. It is shown, by using the properties of the propagator of the system, that this effect may lead to novel resonance phenomena and affects the lifetime of the quasistationary states of the system. The above considerations are illustrated by a simple analytical solvable model. 7 refs.

24107 **(IC—86/223) Three-dimensional semi-infinite spin-1/2 Ising model in a random field.** Saber, M. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701547.

All the possible phase diagrams of a three-dimensional semi-infinite spin-1/2 Ising model in a random field as a function of the ratio of bulk and surface interactions and the ratio of bulk and surface fields have been determined. Within the framework of the mean-field approximation eight generic types of phase diagrams can be found. It is also found that such a system can exhibit a variety of phase transitions and multi-critical points. 21 refs, 7 figs.

24108 **(IC—86/234) Liquid structure and freezing of metals and salts.** Tosi, M.; Rovere, M.; D'Aguanno, B. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701549.

We briefly review recent developments in the density-wave theory of the liquid-solid transition. Various examples are given of the evaluation of phase diagrams for models relevant to pure metals, mixtures and salts based on alternative approaches to the construction of the free energy of a hot crystal from properties of its liquid. Phenomenological connections between liquid structure and hot-solid properties in superionic and glass-forming salts are also discussed. 46 refs, 2 tabs.

24109 **(IC—86/236) Electron spin-lattice relaxation in fractals.** Shrivastava, K.N. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701550.

We have developed the theory of the spin-fracton interaction for paramagnetic ions in fractal structures. The interaction is exponentially damped by the self-similarity length of the fractal and by the range dimensionality d/sub PHI/. The relaxation time of the spin due to the absorption and emission of the fracton has been calculated for a general dimensionality called the Raman dimensionality d/sub R/, which for the fractons differs from the Hausdorff (fractal) dimensionality, D, as well as from the Euclidean dimensionality, d. The exponent of the energy level separation in the relaxation rate varies with d/sub R/d/sub PHI//D. We have calculated the spin relaxation rate due to a new type of Raman process in which one fracton is absorbed to affect a spin transition from one electronic level to another and later another fracton is emitted along with a spin transition such that the difference in the energies of the two fractons is equal to the electronic energy level separation. The temperature and the dimensionality dependence of such a process has been found in several approximations. In one of the approximations where the van Vleck relaxation rate for a spin in a crystal is known to vary with temperature as T/sup 9/, our calculated variation for fractals turns out to be T/sup 6.6/, whereas the experimental value for Fe/sup 3+/ in frozen solutions of myoglobin azide is T/sup 6.3/. Since we used d/sub R/=4/3 and the fracton range dimensionality d/sub PHI/=D/1.8, we expect to measure the dimensionalities of the problem by measuring the temperature dependence of the relaxation times. We have also calculated the shift of the paramagnetic resonance transition for a spin in a fractal for general dimensionalities. 29 refs.

24110 (INIS-mf—10581, pp 19-21) **Depth profiles of H and O in thin films of a-Si:H.** Sie, S.H.; Ryan, C.J.; McKenzie, D.R.; Smith, G.B. (Commonwealth Scientific and Industrial Research Organization, North Ryde, Australia. Div. of Mineral Physics; Sydney Univ., Australia. School of Physics; New South Wales Inst. of Tech., Broadway, Australia). Nov 1985. NTIS (US Sales Only), PC A13/MF A01. File Number DE87701623. (CONF-851194—).

From 4. nuclear techniques of analysis conference; Lucas Heights, Australia (6 Nov 1985).

Detailed depth profiles of hydrogen and oxygen were measured, in thin film samples of a-Si:H produced under varying conditions, using the reaction /sup 1/H(/sup 19/F,$\alpha\ \gamma$)/sup 16/O in the vicinity of the resonance at E(/sup 19/F) = 6.417 MeV to profile hydrogen, and resonant elastic α scattering near the resonance at Eα = 3.0359 MeV to profile oxygen. Contrasting results reflecting the different fabrication conditions were obtained and these were correlated with the measured electrical properties.

24111 (INIS-mf—10589, pp 60) **Hyperfine magnetic fields on Sm nuclei in iron and nickel.** Budzynski, M.; Simecek, P.; Lesner, T.; Cizek, P.; Prochazka, I.; Simeckova, E.; Tsupko-Sitnikov, V.M.; Ehn, L.; Janout, Z. (Uniwersytet Marii Curie-Sklodowskiej, Lublin, Poland; Joint Inst. for Nuclear Research, Dubna, USSR; Ceske Vysoke Uceni Technicke, Prague, Czechoslovakia. Fakulta Jaderna a Fysikalne Inzenyrska). 1985. (In Czech). NTIS (US Sales Only), PC A07/MF A01. File Number DE87701626. (CONF-8508223—Pt.1-Vol.1).

From 8. conference of Czechoslovak physicists; Bratislava, Czechoslovakia (26 Aug 1985).

24112 (INIS-mf—10589, pp 67-68) **Possible /sup 252/Cf utilization in mass spectrometry.** Kliman, J.; Duka-Zolyomi, A. (Slovenska Akademia Vied, Bratislava, Czechoslovakia. Fyzikalny Ustav; Komenskeho Univ., Bratislava, Czechoslovakia. Matematicko-Fyzikalna Fakulta). 1985. (In Slovak). NTIS (US Sales Only), PC A07/MF A01. File Number DE87701626. (CONF-8508223—Pt.1-Vol.1).

From 8. conference of Czechoslovak physicists; Bratislava, Czechoslovakia (26 Aug 1985).

24113 (INIS-SU—401, pp 23-26) **Study of gadolinium-scandium-gallium garnet monocrystals by the Mandelstam-Brillouin light scattering method.** Zharikov, E.V.; Kitaeva, V.F.; Kosheleva, I.V.; Ershova, L.M.; Kalitin, S.P.; Osiko, V.V.; Sobolev, N.N. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780111.

Kratkie Soobshcheniya po Fizike.; No. 1.

In Experimental and theoretical physics. Collection.

Gadolinium-scandium-gallium garnet monocrystals are studied by the Mandelstan-Brillouir light scattering method. Elastic and photoelastic properties are determined, characteristic peculiarities of light scattering in these crystals are found out.

24114 **(LBL—22608) Alloy phase stability.** de Fontaine, D. (Lawrence Berkeley Lab., CA (USA)). Nov 1986. Contract AC03-76SF00098. 25p. (CONF-8610258—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007166.

From International school on electronic band structure; Kanpur, India (20 Oct 1986).

The calculation of phase diagrams from first principles constitutes a critical test of accuracy of both quantum and statistical mechanical models. The slightest variation of calculated energies can result in drastic changes in the topology of phase diagrams: the location of phase boundaries and even the nature of the phases in mutual equilibrium is determined by the common tangent construction so that small alterations in the shape or relative positions of free energy curves can cause common tangents to connect completely different sets of phases, structures, and concentrations. In other words, phase diagrams result from "non-local minimization:" all possible free energy curves of all possible phases must be considered, at all concentrations, and compared to one another. Only "prototype" systems were considered. The tight binding CPA was used as basic quantum mechanical framework, and the CVM was used for the statistical mechanical calculations.

24115 **(NORDITA—85/14-Prepr.) Current fluctuations in sliding charge density waves.** Ritala, R.K.; Hertz, J.A. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). Apr 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751248.

Inhomogeneous dynamical fluctuations are shown to dominate at the onset of sliding motion of charge density waves in any finite dimensionality d. A self-consistent calculation leads to critical exponents different from those of the infinite-range model. There is a crossover to the infinite-range exponents farther away from the threshold; the region where the new exponents hold shrinks and disappears in the limit d->∞.

24116 **(SAND—87-0261C) Molecular dynamics simulation of beam deposition of low-energy (10-100 eV) Si atoms on the Si(111) surface.** Dodson, B.W.; Taylor, P.A. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1987. Contract AC04-76DP00789. 26p. (CONF-870385—5). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006131.

From SPIE conference on growth of compound semiconductors; Bay Point, FL, USA (22 Mar 1987).

The deposition of low energy (10 to 100 eV) silicon atoms onto an unreconstructed (111) silicon surface has been studied using molecular dynamics techniques and an accurate empirical potential describing the covalent Si-Si bonding. 10 eV silicon atoms were directed normal and at 60° angles to a silicon (111) substrate. The resulting atomic trajectories and substrate response were studied to determine the energy loss mechanism resulting in capture and the local lattice excitation near and subsequent diffusion of excess vibrational energy away from the impact point. More glancing angles of incidence (5 to 30°) were studied for beam energies of 20 to 100 eV. 6 refs.

24117 **(SAND—87-0358C) Molecular-dynamics simulation of low-energy beam deposition of silicon.** Dodson, B.W. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 27p. (CONF-870224—2). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006132.

From 2. topical meeting on microphysics of surfaces, beams and adsorbates; Santa Fe, NM, USA (16 Feb 1987).

The mechanisms controlling low energy (10-100 eV) beam deposition of silicon onto a relaxed (111) silicon substrate have been studied using a molecular dynamics technique. The atomic interaction was modeled using a many body empirical potential so that the effects of the covalent Si-Si bonding could be accurately included. 10 eV silicon atoms with near-perpendicular incidence were studied to determine the energy loss mechanism resulting in capture and the local lattice excitation near and subsequent diffusion of excess vibrational energy away from the impact point. Shallower angles of incidence (5°-30°) were studied for beam energies of 20-100 eV. For incidence angles less than an energy- and orientation-dependent critical value, a new phenomenon of 'surface channeling' is observed, in which the trajectory of the incoming particle is steered parallel to, and roughly 2 A above, the surface of the substrate by inelastic interaction with the surface atoms. 11 refs., 5 figs.

24118 **(UCRL—95038) Soft x-ray generation by the Cherenkov effect.** Moran, M.J.; Chang, B. (Lawrence Livermore National Lab., CA (USA)). 25 Feb 1987. Contract W-7405-ENG-48. 20p. (CONF-870155—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006241.

From 10. Werner Bradt workshop on penetration phenomena: dynamic actions of energetic probes with condensed matter; Alicante, Spain (7 Jan 1987).

The Cherenkov effect may be used to generate coherent soft x rays by taking advantage of the dielectric constants of materials in the neighborhood of atomic resonances. The Cherenkov effect usually is not possible for x rays because the refractive index is less than one for most x-ray frequencies. However, for narrow frequency bands near atomic resonances, the refractive index can exceed unity with values large enough to generate coherent x rays with efficiencies higher than any other electron-driven technique. The basic physics of the process is discussed and is used to make rough estimates of photon production efficiencies. An exact theoretical description of Cherenkov production in thin foils is used together with recently-measured refractive indices to calculate the emission distributions of 100 eV photons from thin silicon foils. These distributions are found to be roughly consistent with the simple estimates. In addition, unusual behavior by the distributions suggests a technique that can be used to increase dramatically the peak angular intensities. 15 refs., 10 figs.

24119 **Multipolar response of small metallic spheres: Nonlocal theory.** Fuchs, R.; Claro, F. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review* [*Section*] *B: Condensed Matter;* **35**: No. 8, 3722-3727(15 Mar 1987). Contract W-7405-ENG-82.

The multipolar response of a small metallic sphere is studied with use of a nonlocal dielectric function. Results obtained with the hydrodynamic and Lindhard-Mermin models are presented and compared to those given by the local Drude model. We find an enhancement of the imaginary part of the multipole polarizabilities at low frequencies and pole order l<l/sub c/, where l/sub c/ is a cutoff order that corresponds to excitations at the high-wave-vector edge of the electron-hole pair continuum. The absorption coefficient for two very close spheres is calculated and the effect of nonlocality on the number and position of the multipolar absorption peaks is discussed.

24120 **Relationship between specific surface area and spatial correlation functions for anisotropic porous media.** Berryman, J.G. (Lawrence Livermore National Laboratory, P. O. Box 808 L-156, Livermore, California 94550). *Journal of Mathematical Physics (New York);* **28**: No. 1, 244-245(Jan 1987). Contract W-7405-ENG-48.

A result of Debye, Anderson, and Brumberger [P. Debye, H. R. Anderson, Jr., and H. Brumberger, J. Appl. Phys. 28, 679 (1957)] for isotropic porous media states that the derivative of the two-point spatial correlation at the origin is equal to minus one-quarter of the specific surface area. This result is generalized for nonisotropic media by noting that the angular average of the anisotropic two-point spatial correlation function has the same relationship to the specific surface area.

24121 **Band theory of superlattices.** Elci, A. (Department of Physics and Astronomy, University of New Mexico, Albuquerque, New Mexico 87131). *Physical Review* [*Section*] *B: Condensed Matter;* **34**: No. 12, 8616-8628(15 Dec 1986).

We present a first-principles theory of the band structure of lattice-matched superlattices. We formulate the one-electron problem of superlattices in the Bloch representation of one of the constituent materials. In this formulation, the symmetry breaking along the superlattice axis leads to partitioning and folding of the original homogeneous crystal Brillouin zone onto a thin region around the center of the zone. A single homogeneous crystal Bloch function becomes a multicomponent wave function. Each component represents a superlattice subband. We use Loewdin's theorem to derive

series expressions for the subband energies and wave functions, and discuss the relation between these solutions and the eigenvalues and eigenfunctions corresponding to quantum-well models. We apply the general results to a superlattice composed of two different types of simple two-band model materials.

24122 **Trithallium(I) phosphate, an optical second-harmonic generator.** Zalkin, A.; Templeton, D.H.; Eimerl, D.; Velsko, S.P. (Lawrence Berkeley Lab., CA, USA. Materials and Molecular Research Div.; Lawrence Livermore National Lab., CA, USA). *Acta Crystallographica, Section C: Crystal Structure Communications;* **42**: No. 12, 1686-1687(15 Dec 1986).

Tl/sub 3/PO/sub 4/, M/sub r/=708.08, hexagonal, P6/sub 3/, a=8.369 (8), c=5.111 (5) A, V=310.0 A/sup 3/, Z=2, D/sub x/=7.59 g cm/sup -3/, MoKα, λ(α/sub 1/)=0.70930 A, μ=787.6 cm/sup -1/, F(000)=580, T=296 K, R=0.017 for 241 reflections. The thallium(I) ion is coordinated to oxygen from three different phosphate groups at distances 2.529 (7), 2.553 (5) and 2.555 (8) A. These distances are comparable to the shortest Tl-O distances reported for other compounds.

24123 **On the interpolation of eigenvalues and a resultant integration scheme.** Koelling, D.D.; Wood, J.H. (Materials Science and Technology Division, Argonne National Laboratory, Argonne, Illinois 60439). *Journal of Computational Physics;* **67**: No. 2, 253-262(Dec 1986). Contract W-31-109-ENG-38.

The interpolation of one-electron energy band eigenvalues by way of an interpolating function expanded as a linear sum of star functions with expansion coefficients determined via a spline-like variational scheme is described. We discuss the practical aspects of such a scheme (first, set up by Shankland) and establish that it is a viable one; we then observe that it can serve as the basis of a very useful integration scheme. The viability is established through a discussion of the choice of the interpolating function and the associated problems of point set selection and truncation of the expansion. The proposed integration scheme arises from the crucial observations that the interpolation formalism can be described in terms of a transfer matrix which operates on the data to yield the expansion coefficients; this matrix depends on the choice of the variational, the point set, and the truncation but not the data. This allows one to produce a very powerful integration scheme which is applicable to a wide class of problems. copyright Academic Press, Inc.

24124 **Positron or positronium-like surface state on Al(100).** Lynn, K.G.; Mills, A.P. Jr.; West, R.N.; Berko, S.; Canter, K.F.; Roellig, L.O. (Brookhaven National Lab., Upton, NY). *Physical Review Letters;* **54**: No. 15, 1702-1705(15 Apr 1985). Contract AC02-76CH00016.

Using a high-intensity beam of 200-eV positrons the authors have measured the two-dimensional angular correlation of the 2γ annihilation radiation from a clean Al(100) surface. The momentum distribution identified with the positron surface state has a nearly isotropic conical shape and a (7.1 +/- 0.5)-mrad full width at half maximum. The data are not consistent with a simple interpretation based on either the usual model of a positron bound in a surface state by its image-correlation potential or a positronium atom weakly bound to the surface. 15 references, 3 figures.

24125 **Charged vortex excitations in quantum Hall systems.** Sokoloff, J.B. (Northeastern Univ., Boston, MA). *Physical Review* [*Section*] *B: Condensed Matter;* **31**: No. 4, 1924-1928(15 Feb 1985). Contract FG02-84ER45079.

Some consequences of the existence of charged vortex excitations in systems exhibiting the quantum Hall effect are discussed, as well as the conditions under which such excitations are expected to occur. 10 references.

24126 **Stochastic theory of scattering from idealized spinodal structures.** Hopper, R.W. (Lawrence Livermore National Lab., CA). *Journal of Non-Crystalline Solids;* **70**: 111-142(1985). Contract W-7405-ENG-48.

Certain model late stage spinodal structures can be generated mathematically by the relation ΔC/sub L/(r) = G[ΔC$_0$(r)], where ΔC/sub L/(r) is the composition deviation from the mean of the late stage structure and ΔC$_0$(r) is a random superposition of waves. Then the autocorrelation function (ACF) of ΔC/sub L/(r) depends only on the ACF of ΔC$_0$(r), and the latter is related simply to the distribution of wavelengths present. Coherent scattering can be computed from the ACF. The basic late stage model (BLSM) is defined by G(ΔC) = 2H(ΔC)-1, where H(x) is the Heaviside step function. This converts the smooth, wavy ΔC$_0$(r) into a late stage structure having the same morphology but equilibrium compositions an sharp interfaces. The scattering theory formalism is developed generally and then applied to the BLSM using illustrative wavelength distributions. Scattering as a function of angle and wavelength is computer. It is also found that the BLSM turbidity ~Ck^{4}w vector^3, where w vector is the mean phase width and C depends only weakly upon the wavelength distribution of ΔC$_0$(r). 48 references, 4 figures, 1 table.

24127 **Phase diagram of the ground state of spin-1 quantum chains.** Chui, S.T.; Ma, K.B. (Univ. of Delaware, Newark). *Physical Review* [*Section*] *B: Condensed Matter;* **29**: No. 3, 1287-1291(1 Feb 1984). Contract AC02-82ER12060.

A general phase diagram for anisotropic quantum spin chains is presented for the first time. The way in which the classical limit is approached is suggested. The nature of the instantons in these systems is discussed. 17 references, 3 figures.

24128 **Implications of heavy-ion-induced satellite x-ray emission I.** Raman, S.; Vane, C.R. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **B3**: 71-77(1984). Contract W-7405-ENG-26.

Regardless of how they are induced, x-ray spectra are sensitive to the chemical environment of the emitting atom and can yield information on the atomic and electronic structure of host materials. Those spectra resulting from heavy-ion excitation are discussed in this series of papers. Highly energetic heavy ions are capable of producing multiple inner-shell ionization. The resulting spectrum of x-rays from a particular target atom is composed of a complex series of satellite lines. Environmental effects give rise to the redistribution of intensity from one satellite group to another. These changes can be correlated with bulk chemical properties (valence-electron densities, effective charges, covalencies, etc.). The possibility of obtaining new chemical information (e.g., in implanted materials and in metal alloys) exists but requires greater experimental and theoretical understanding of both parametric variations and the fine structure of satellite lines. 44 references, 5 figures, 1 table.

24129 **Implications of heavy-ion-induced satellite x-ray emission II.** O'Kelley, G.D.; Auble, R.L.; Hulett, L.D. Jr.; Kim, H.J.; Milner, W.T.; Raman, S.; Shahal, O.; Vane, C.R.; Young, J.P.; Lapicki, G. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **B3**: 78-87(1984). Contract W-7405-ENG-26.

Cross sections are reported for x-ray production in targets of $_{23}$V, $_{29}$Cu, $_{41}$Nb, $_{73}$Ta, and $_{78}$Pt by ^{40}Ar ions of 36.0, 56.4, 76.6 and 103 MeV. Because the targets were relatively thick, ~ 1 mg/cm^2, the data were corrected - using a novel approach - for projectile energy loss and x-ray attenuation in the targets. The cross sections so analyzed are compared with the predictions of the first Born approximation as well as with those of a more extensive treatment which includes energy loss, Coulomb deflection, perturbed stationary-state, and relativistic effects. The significant discrepancies between the data and this latter theory are attributed primarily to the influence of multiple ionization on the x-ray emission probabilities. 19 references, 9 figures, 5 tables.

24130 **Implications of heavy-ion-induced satellite x-ray emission III.** Vane, C.R.; Hulett, L.D. Jr.; Kahane, S.; McDaniel, F.D.; Milner, W.T.; O'Kelley, G.D.; Raman, S.; Rosseel, T.M.; Slaughter, G.G.; Varghese, S.L.; Young, J.P. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **B3**: 88-93(1984). Contract W-7405-ENG-26.

High-resolution (~ 7 eV at 2.3 keV) sulfur K/sub α/ x-ray spectra have been obtained for a series of sulfur compound targets under heavy-ion impact at the Holifield Heavy Ion Facility. The spectra observed are dominated by a series of satellite peaks arising from varying degrees of L-shell ionization at the time of x-ray emission. Each spectral profile has been parameterized by a single variable p/sub L/, the apparent average L-shell ionization probability. Correlations are evident between p/sub L/ and the corresponding sulfur atom chemical environment. Much stronger correlations are, however, found for variations of some individual peak intensities with specific chemical parameters. Comparison of results for Ar/sup q+/ and Kr/sup q+/ projectiles show that while L-shell ionization probability has increased, chemical sensitivity has apparently saturated. 7 references, 5 figures, 2 tables.

24131 **Implications of heavy-ion-induced satellite x-ray emission IV.** Rosseel, T.M.; Dale, J.M.; Dunn, H.W.; Hulett, L.D. Jr.; Kahane, S.; Krause, H.F.; Raman, S.; Slaughter, G.G.; Vane, C.R.; Young, J.P. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **B3**: 94-99(1984). Contract W-7405-ENG-26.

The L x-ray satellites produced by 1 MeV/u Cl/sup q+/ bombardment of a series of molybdenum compounds and alloys were examined using a high-resolution (7 eV at 2.3 keV) crystal spectrometer. The normalized emission spectra exhibited variations in the intensity distribution of the L/sub α//sup n/M/sup m/ and L/sub β//sup n/M/sup m/ satellites for different targets. Using Mo metal as a reference or subtrahend, amplification of the intensity variations was obtained by calculating difference spectra. Select regions of these difference spectra displayed systematic variations that were correlated to the valence-electron density of the material. These results clearly demonstrate that heavy-ion-induced L x-ray satellites may be used to probe the chemical environment of intermediate Z elements. In addition, the alloy results may provide a basis for the application of this technique to a variety of materials problems. 14 references, 4 figures, 2 tables.

24132 **Implications of heavy-ion-induced satellite x-ray emission V.** Raman, S.; Kaellne, E.; Kaellne, J.; Nakajima, T.; Nestor, C.W. Jr.; Stelson, P.H.; Vane, C.R.; Walkiewicz, T.A. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **B3**: 100-103(1984). Contract AC02-76ET53052;W-7405-ENG-26.

The authors have studied K/sub α/ x-ray emission induced by 34 MeV ^{35}Cl ions from several compounds at the ORNL EN Tandem Van de Graaff with a high-throughput, high-resolution Bragg crystal spectrometer in the Van Hamos geometry. The x-rays are diffracted off a cylindrically curved, highly reflective quartz crystal and detected with a position-sensitive proportional counter. The resolution of the spectrometer was better than one part in 2000. The data show remarkable and distinct fine structure in the individual KL/sup n/ satellite peaks. Such data should aid in eventual comparisons with structures predicted by theoretical transition energy and intensity calculations. 8 references, 3 figures.

24133 **Ion beam analysis of irradiated materials.** Averback, R.S. (Argonne National Lab., IL). *Materials Science Forum;* **2**: 99-122(1984).

Ion beam analysis is a simple yet powerful method to analyze the composition and structure of the surface region of a material. In this review, the basic principles of Rutherford backscattering and ion channeling are described, and various applications of ion beam analysis of irradiated materials are illustrated. Examples involving ion-beam mixing and radiation-induced segregation demonstrate that by using Rutherford backscattering, changes in the composition of a material over distances greater than 25 A are readily detected. The use of ion channeling to determine the site location of solute or impurity atoms is also described. The specific problem of determining the configuration of a complex which is formed by a self-interstitial and solute atom is discussed. 26 references, 13 figures.

24134 **Computer simulations of multiple-quantum NMR experiments. I. Nonselective excitation.** Murdoch, J.B.; Warren, W.S.; Weitekamp, D.P.; Pines, A. (Lawrence Berkeley Lab., CA). *Journal of Magnetic Resonance;* **60**: 205-235(1984). Contract AC03-76SF00098.

The multiple-quantum (MQ) evolution of anisotropic spin systems with four to eight coupled protons is analyzed using a computer for the basic three-pulse sequence. MQ intensities are first investigated as a function of preparation time. The concept of time-independent intensities is then introduced, and an algorithm for efficient computation of these quantities is described. A correlation between the distribution of dipolar coupling values and the intensity of high-quantum lines is discussed; in many cases, these intensities are predicted to be considerably larger than a simple statistical argument would suggest. The effect of varying the preparation and detection times independently is analyzed as a random walk problem. 45 references, 14 figures, 5 tables.

24135 **Calculation of coherent phase equilibria.** Williams, R.O. (Oak Ridge National Lab., TN). *CALPHAD: Computer Coupling of Phase Diagrams and Thermochemistry;* **8**: No. 1, 1-14(1984). Contract W-7405-ENG-26.

The authors have derived expressions for the elastic energy for coherent mixtures for two important morphologies. The compositions of the two phases comprising the coherent mixture are found by minimizing the total energy. The composition difference may be smaller or larger than the equilibrium difference. Each of the phases can be restricted to some maximum volume fraction such that the composition range over which a coherent mixture can exist is necessarily less than for the equilibrium mixture. The elastic energy can be so large that a coherent mixture cannot form. 30 references, 12 figures, 1 table.

24136 **Diffusion correlation and isotope effects in high-defect-content solids.** Murch, G.E. (Argonne National Lab., IL). *Philosophical Magazine, [Part] A: Defects and Mechanical Properties;* **49**: No. 1, 21-29(1984). Contract W-31-109-ENG-38.

The tracer correlation factor for diffusion via non-interacting vacancies has been calculated by a Monte Carlo method for the simple-cubic lattice with a variable vacancy content. Particular emphasis has been placed on obtaining results of very high precision. The results are in excellent agreement with the recent analyses by Nakazato and Kitahara, and Tahir-Kheli and Elliott. In a separate calculation the tracer correlation factor in the same model has been calculated using a Monte Carlo method analogous to the experimental method used for measuring diffusion isotope effects. Good agreement was obtained with the direct method, indicating that in this model the tracer correlation factor can be well represented by the impurity correlation factor form. 19 references, 2 figures, 1 table.

24137 **Effect of interplane coupling in quasi-two-dimensional systems.** Chui, S.T. (Univ. of Delaware, Newark). *Physical Review [Section] B: Condensed Matter;* **28**: No. 5, 2863-2865(1 Sep 1983). Contract AC02-82ER12060.

There are many divergent susceptibilities in two-dimensional systems that are not associated with phase transitions. The authors propose that when stacks of planes of these two-dimensional systems are coupled together, these divergences indicate genuine phase transitions. Applications to melting, commensurate-incommensurate transitions, and superconductivity are pointed out. 14 references, 1 figure, 1 table.

24138 **Auger lineshape analysis.** Madden, H.H. (Sandia National Lab., Albuquerque, NM). *Surface Science;* **126**: 80-100(1983). Contract AC04-76DP00789.

Auger transitions occurring at solid surfaces give spectra containing information on the energy distribution of valence electrons involved in the transition. Thus Auger Electron Spectroscopy (AES) can be used as a valence band (VB) spectroscopy that is surface sensitive. Analyses of a number of core-valence-valence (CVV) Auger spectra are reviewed to illustrate the VB information contained in their lineshapes and to indicate current understanding of the physics of the Auger process as it applies to solids. The

KVV spectrum from elemental beryllium is an example of a CVV line that can be analyzed simply in terms of the sum of convolution products of independent-particle VB density-of-states (DOS) components. Other elemental solids for which such simple arguments suffice include Al, Si, Li, Ti, Co and B. The CVV spectra from copper are discussed as examples of CVV lineshapes that are distorted from those expected from simple VB DOS arguments because localization in the two-hole Auger final state for Cu makes hole-hole interactions important in determining the Auger lineshapes. Initial state screening is shown to influence the CVV lineshapes from Be as well as Cu. CVV spectra from the compound surfaces BeO and SiO_2 are analyzed using concepts of interatomic transitions as well as independent-particle VB arguments. These spectra show that AES is a probe of the local DOS about the core-hole site. This ability of AES to give local bonding information is illustrated by analyses of CVV spectra from multi-component surface which may be made in terms of the simple superposition of local-bonding signals. Thus the $SiL_{23}VV$ signal from silicon oxynitride is shown to be the superposition of signals representing elemental Si, Si-H, Si-N and Si-O bonding. 72 references, 9 figures.

24139 **(DOE/ER/45113—3) Magnetic impurities in superconductors: Performance report, July 1, 1986-August 31, 1987.** Ruvalds, J. (Virginia Univ., Charlottesville (USA). Dept. of Physics). 1987. Contract FG05-84ER45113. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006338.

The primary objectives of this report have involved various phenomena in superconductors, with a goal toward formulating a procedure for finding new materials that function at desirable temperatures and exhibit high critical magnetic fields. Much of the effort was devoted to the investigation of the interaction of rare earth impurity spins in a system of conduction electrons which may become superconducting. The normal state resistivity of various heavy fermion alloys has been examined in order to determine the fundamental interactions responsible for the competition between magnetic ordering and superconductivity. Also, the initial research effort on possible room temperature superconductivity of metallic hydrogen has been described. Other topics covered in this report have been the investigation of charge and spin-density waves and the study of electron relaxation relations and transient spectroscopy of α-Si:H. (FI)

24140 **(IC—86/120) Ac losses in a type-II superconducting slab including surface barrier effects.** Saif, A.G. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701410.

The structure of a surface barrier, in the frame of the general critical-state theory, of a type II superconducting slab subjected to parallel magnetic fields (in which the direction of the dc bias and ac field are left arbitrary) has been incorporated in this paper. The internal magnetic field distribution has been developed. In the case of the amplitude of ac field (b/sub O/) less than the magnitude of the dc bias field (B/sub O/), analytic expressions for ac losses are obtained. Maximum values of FL cutting and flux-pinning losses are also determined. A good agreement with the previous results (in this case of α/sub O/=O with absence of surface barrier effects) is obtained. 20 refs, 1 fig, 2 tabs.

24141 **(IC—86/199) Brillouin-Wigner theory of mixed-valence impurities in BCS superconductor: T/sub c//T/sub cO/ and ΔC/ΔC/sub O/.** Li Jun; Gong Changde. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701538.

The (lowest order) Brillouin-Wigner perturbational expansion theory is adopted to describe the mixed-valence impurities in the BCS superconductor. Two substantial quantities characterizing the superconducting state, i.e. the reduced transition temperature T/sub c//T/sub cO/ and the reduced specific heat jump ΔC/ΔC/sub O/ are calculated numerically as a function of the impurity concentration x and the energy level difference E/sub f/ between two 4f configurations. A comparison with the experimental data of the Th/sub 1-x/Ce/sub x/ and Th/sub 1-x/U/sub x/ alloy is also included with a more reasonable fitting than Kaiser's theory. 8 refs, 3 figs.

24142 **(LA-UR—87-389) Experimental summary.** Smith, J.L. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 6p. (CONF-870142—7). NTIS MF A01; 2; GPO Dep. File Number DE87006053.

From 5. international conference on valence fluctuations; Bangalore, India (5 Jan 1987).

This brief paper discusses various items covered in this conference: local moment magnetism, heavy fermions, d-electron transition metals, superconductivity, heavy electrons, ordered compounds and impurities, etc. There is a continuum in the physics, ranging from local f-electron moments through heavy fermions through mixed valence to conventional energy band metals with trivial Fermi surfaces. 24143 **(CONF-870459—) Workshop report on new directions in x-ray scattering.** Brown, G.; Del Grande, N.K.; Fuoss, P.; Mallett, J.H.; Pratt, R.; Templeton, D. (Stanford Univ., CA (USA); Lawrence Livermore National Lab., CA (USA); Bell Labs., Holmdel, NJ (USA); Pittsburgh Univ., PA (USA); Lawrence Berkeley Lab., CA (USA)). 1 Feb 1987. Contract W-7405-ENG-48. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006305.

From Workshop report on new directions in X-ray scattering; Pacific Grove, CA, USA (2 Apr 1987).

This report is a summary of the Workshop on New Directions in X-Ray Scattering held at the Asilomar Conference Center, Pacific Grove, California, April 2-5, 1985. The report primarily consists of the edited transcript of the final review session of the workshop, in which members of a panel summarized the proceedings. It is clear that we are close to achieving an accurate theory of scattering in independent particle approximation, but for edge regions, there is need to go beyond this approach. Much of what is experimentally interesting in scattering is occurring between the photoabsorption edge and the photoelectric threshold. Applications in condensed matter and biological and chemical material studies are expanding, exploiting higher intensity sources and faster time resolution as in magnetic scattering and surface studies. Storage rings are now conventional sources, and new high-intensity beam lines are under development; the free electron laser is one of the more speculative sources. Recent work in x-ray scattering has led to advances in x-ray optics, and conversely, advances in x-ray optics have benefitted our understanding of x-ray scattering.

24144 (EUR—9708-Vol.2, pp 817-836) **Chaos, strange attractors and nonlinear dynamics.** Ott, E. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Concepts of nonlinear dynamics in chaotic dissipative systems are reviewed and recent developments pointed out. Topics covered include strange attractors, how chaos comes about with variation of a system parameter, universality, chaotic repellers and their effect on predictability, and plasma applications.

24145 **(GSI—86-44-Prepr.) Angular momentum projected semiclassics.** Hasse, R.W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Oct 1986. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751223.

By using angular momentum projected plane waves as wave functions, we derive semiclassical expressions for the single-particle propagator, the partition function, the nonlocal density matrix, the single-particle density and the one particle- one hole level density for fixed angular momentum and fixed z-component or summed over the z-components. Other quantities can be deduced from the propagator. In coordinate space (r, r') the relevant quantities depend on vertical stroker - r/sup 3/vertical stroke instead of vertical stroker - r'vertical stroke and in Wigner space (R, P) they become proportional to the angular momentum constraints δ(vertical strokeRxPvertical stroke/Planck constant - l) and δ((RxP) /sub z//Planck constant - m). As applications we calculate the single-particle and one particle- one hole level densities for harmonic oscillator and Hill-Wheeler box potentials and the imaginary part of the optical potential and its volume integral with an underlying harmonic oscillator potential and a zero range two-body interaction.

24146 **(IC—86/155) K-Kolmogorov homology groups.** Abd El-Sattar, A.D. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701523.

In the present work we use the idea of the K-groups to define the K-Kolmogorov homology groups, and their induced homomorphisms and boundary operators for the case of a pair of discrete coefficient groups, where K denotes a locally-finite simplicial complex. Moreover, we prove that our homology construction is exact. 12 refs.

24147 **(IC—86/164) Bivariational calculations for radiation transfer in an inhomogeneous participating media.** El Wakil, S.A.; Machali, H.M.; Haggag, M.H.; Attia, M.T. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701526.

Equations for radiation transfer are obtained for dispersive media with space dependent albedo. Bivariational bound principle is used to calculate the reflection and transmission coefficients for such media. Numerical results are given and compared. 8 refs, 1 tab.

24148 **(IC—86/180) Attractor in a superstring model. The Einstein theory, the Friedmann universe and inflation.** Maeda, K. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 34p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701529.

In a superstring model, the minimum of the SUSY breaking potential through a gluino condensation provides a no-scale model, which may explain the hierarchy problem, permit inflation and give zero cosmological constant naturally. It is shown that the above minimum is an attractor in the dynamical system. This minimum also guarantees the 4-dimensional Einstein gravity theory, rather than the Brans-Dicke theory, in the low energy limit. Using this model, a preferential scenario of evolution towards (the 4-dimensional Friedmann universe) x (a constant Calabi-Yau space) via inflation is discussed. A series of phase transitions due to a quantum tunnelling of the quantized antisymmetric field H/sub μνrho/ may occur, forming a hierarchical bubble structure. 35 refs, 6 figs.

24149 **(IC—86/182) Generalized quantal equation of motion.** Morsy, M.W.; Embaby, M. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701531.

In the present paper, an attempt is made for establishing a generalized equation of motion for quantal objects, in which intrinsic self adjointness is naturally built in, independently of any prescribed representation. This is accomplished by adopting Hamilton's principle of least action, after incorporating, properly, the quantal features and employing the generalized calculus of variations, without being restricted to fixed end points representation. It turns out that our proposed equation of motion is an intrinsically self-adjoint Euler-Lagrange's differential equation that ensures extremization of the quantal action as required by Hamilton's principle. Time dependence is introduced and the corresponding equation of motion is derived, in which intrinsic self adjointness is also achieved. Reducibility of the proposed equation of motion to the conventional Schroedinger equation is examined. The corresponding continuity equation is established, and both of the probability density and the probability current density are identified. 11 refs.

24150 **(IC—86/195) Novel resonant processes in one-dimensional elastic scattering.** Garcia-Calderon, G. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701535.

The effect of ordered and disordered arrays on resonant elastic scattering is considered by using some simple properties of the propagator. A crucial role is played by the residues at the complex poles which define the resonant eigenstates. The main effect of disorder near resonance energy is to modify the coupling of the resonant eigenstate with the end points of the system. This may lead to situations where decay occurs through the incident direction resulting in the almost disappearance of the transmission peak. The results throw light on the formation process of localized and extended states in single systems. 10 refs.

24151 **(IC—86/196) Expansion of continuum wave functions in terms of resonant states. 2. Solvable models.** Garcia Calderon, G.; Rubio, A. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701536.

This paper applies a formalism which provides a purely discrete expansion for a continuum wave solution of the Schroedinger equation in terms of resonant states along the interior region of a finite range interaction. We consider two exactly solvable models for several values of the distance and momenta on and off resonance. Our results are compared with a recent approach by Bang and collaborators which involves subtraction terms. It is found that along the internal region the subtraction terms are not in general negligible. Our work substantiates an expression for the continuum wave function near resonance. We also obtain an equation for time delay in terms of resonant states. 28 refs, 7 tabs.

24152 **(IC—86/201) N-level atom and (N-1) modes: Detuning, dynamics and statistical aspects.** Abdel-Hafez, A.M.; Obada, A.S.F. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701540.

A model is presented to investigate the problem of interaction between an N-level atom and (N-1) modes of the field. The model includes the effect of detuning. Constants of motion are obtained. The evolution operator is calculated. The probability distribution function for the photons numbers is computed for different initial atomic states. The characteristic functions are computed. Different statistical quantities concerning the photons or the atomic system are given. It is found that if the atom starts from a definite state then the photon number never exceeds its initial value in the mode that effects the interaction between this state and the uppermost state. On the other hand, in the other modes the photon numbers at any time are never less than the initial value. 7 refs, 1 fig.

24153 **(IC—86/202) Three-level atom and two modes: Generalized models and multiphotons.** Abdel Hafez, A.M.; Obada, A.S.F.; Ahmad, M.M.A. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701541.

A generalized model is presented for the interaction between a 3-level atom and a 2-mode field. The interaction depends on functions on the photon numbers in the modes. There is also detuning included. The use of spin-1 operators to describe the atomic system is emphasized. Different statistical quantities are computed for the photons and the atomic system in the general case. Multiphoton processes, whether cascade or scattering, are discussed by using specific formulae for the photon numbers functions. A model is presented in which infinite sums tend to elementary functions or infinite integrals in the two cases of thermal and coherent distributions for the two modes. 14 refs.

24154 **(IC—86/204) K-Kolmogorov cohomology groups.** Abd El-Sattar, A.D. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701543.

In the present work we use the idea of K-groups to give a description of certain modification of the Kolmogorov cohomology groups for the case of a pair (G,G') of discrete coefficient groups. Their induced homomorphisms and coboundary operators are also defined, and then we study the resulting construction from the point of view of Eilenberg-Steenrod axioms. 17 refs.

24155 **(IC—86/214) Radiation transfer in sphere with internal source.** Saad, E.A.; El Wakil, S.A. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701545.

In this note, we connect the problem of radiation transfer in a sphere with diffuse reflectivity and containing an energy source with the problem of source free radiation transfer with isotropic boundary condition. Equation for the radiative heat flux is obtained for a polynomial source. In the special case of uniform source, the radiation heat flux and the angular flux are given in terms of the albedo of the second problem. 5 refs.

24156 **(IC—86/221) Some remarks on a result of Toppila.** Liverpool, L.S.O. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701546.

This investigation shows how to generalize a condition of Toppila for Picard sets of entire functions. His result is a particular case of our new theorem. 9 refs.

24157 **(IC—86/237) Generalized Jaynes-Cummings model for the N-level atom and (N-1) modes.** Abdel-Hafez, A.M.; Abu-Sitta, A.M.M.; Obada, A.S.F. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701551.

A generalized Jaynes-Cummings model is presented to discuss the interaction between an N-level atom and N-1 modes of the radiation field. The level to which the rest of the levels are connected lies in the middle. A detuning parameter is introduced. Distribution functions and characteristic functions are calculated. Different statistical averages are obtained. 16 refs.

24158 **(IC—86/238) Oscillatory behaviour of solutions of first-order ordinary and delay differential equations.** Parhi, N. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701552.

In this work, sufficient conditions have been obtained for oscillation-non-oscillation of solutions of non-linear non-homogeneous first-order ordinary and delay differential equations. 10 refs.

24159 **(IC—86/250) Note on generalized metrics on complex manifolds.** Rastogi, S.C. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701554.

In 1981, Hojo introduced a generalized metric function PHI/sup (P)/, p(not =1) is a real number in a Finsler space and studied some beautiful consequences of such a metric function. The aim of this paper is to investigate the possibility of introducing a similar metric function on a complex manifold studied by Rund. It is interesting to note that such an introduction is unnatural for values of p other than 2, which corresponds to the metric function introduced by Rund. 3 refs.

24160 **(IC—86/254) Some curvature properties of quarter symmetric metric connections.** Rastogi, S.C. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701555.

A linear connection Γ/sub ji//sup h/ with torsion tensor T/sub j//sup h/P/sub i/-T/sub i//sup h/P/sub j/, where T/sub j//sup h/ is an arbitrary (1,1) tensor field and P/sub i/ is a 1-form, has been called a quarter-symmetric connection by Golab. Some properties of such connections have been studied by Rastogi, Mishra and Pandey, and Yano and Imai. In this paper based on the curvature tensor of quarter-symmetric metric connection we define a tensor analogous to conformal curvature tensor and study some properties of such a tensor. 6 refs.

24161 **(IC—86/272) Generalization of the Hellmann-Feynman theorem to Gamow states.** Ziesche, P.; Kunze, K.; Milek, B. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701558.

The Hellmann-Feynman theorem valid for the parameter dependence of bound states is generalized to the case of Gamow states using an appropriate definition of scalar products and expectation values with such states. The one-dimensional square well potential is considered as an illustrating example. 21 refs.

24162 **(IC—86/295) Relativistic atomic structure studies via density functional theory.** Das, M.P. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701560.

Relativistic many-body treatment is essential for the study of structures and spectra of heavy atomic systems. In this talk we shall present our attempts to understand the atomic structure of heavy elements and super-heavy elements via a relativistic density functional theory. The relativity is taken care of by the kinematic description of Dirac electrons whereas the many-body aspect is incorporated through exchange-correlation processes. As practical applications the results of our calculations for the inner-shell structures of several heavy atoms will be presented. 18 refs.

24163 **(IC—86/329) Perturbative and global anomalies in supergravity theories.** Sezgin, E. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701562.

Perturbative and global anomalies in supergravity theories are reviewed. The existence of a matter and gauge coupled supergravity theory in six dimensions with E/sub 6/xE/sub 7/xU(1) symmetry and highly nontrivial anomaly cancellations is emphasised. The possible string origin of this theory is posed as an open problem, study of which may lead to discovery of new ways to construct/compactify heterotic superstrings. 35 refs.

24164 **(INIS-mf—10348) Toeplitz operators - an asymptotic quantization of symplectic cones.** Boutet de Monvel, L. (Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS)). 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751328.

BiBoS.; No. 215/86.

Let Σ be a symplectic manifold, H a Hilbert space. It is not possible to represent the group of symplectic automorphisms of Σ in the group of unitary operators of H in a manner nicely linked with the geometry of Σ. However if Σ is the cotangent bundle of a manifold X, unitary Fourier integral operators acting on L/sup 2/(X) provide an asymptotic analogue: they move the wave front set of distributions according to some homogeneous symplectic map. We describe here a similar construction for any symplectic cone with a compact basis. A good model for this is given by the algebra of Toeplitz oeprators on a complex domain. (orig./HSI).

24165 **(INIS-mf—10349) Feynman path integrals and the classical limit.** Rezende, J. (Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS)). 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751327.

BiBoS.; No. 132/85.

The author discusses the properties of the Feynman path integral required for its use in semiclassical treatment of the Schroedinger equation. (HSI).

24166 **(INIS-mf—10350) Stochastic diffusions for the Fermi oscillator.** Garbaczewski, P. (Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS)). 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751326.

BiBoS.; No. 232/86.

Solutions of the Schroedinger equation for the two-level system induce well defined controlled stochastic Markov processes, which form a subset of those characterizing the quantum oscillator problem.

24167 **(INIS-mf—10351) About the unitary discretizations of Heisenberg equations of motion.** Vazquez, L. (Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS)). 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751325.

BiBoS.; No. 233/86.

In a recent paper Bender et al. (1985) have used a unitary discretization of Heisenberg equations for a one-dimensional quantum system in order to obtain information about the spectrum of the underlying continuum theory. The method consists in comparing the matrix elements between adjacent Fock states of the operators and at two steps. At the same time a very simple variational approach must be made. The purpose of this paper is to show that with unitary schemes, accurate either to order tau or tau/sup 2/, we obtain the same spectrum results in the framework of the above method. On the other hand the same eigenvalues are obtained with a non-unitary scheme (Section II). In Section III we discuss the construction of the Hamiltonian associated to the unitary discretizations.

24176 **(JINR—E-17-85-967) On the stability of solitary waves of the (phi/sup 3/ - phi/sup 5/)-nonlinear Schroedinger equation under non-vanishing boundary conditions.** Barashenkov, I.V.; Gocheva, A.D.; Makhankov, V.G.; Puzynin, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701589.

The stability of the bubble-like soliton solution of the equation is examined: ipsi/sub t/+psi/sub xx/+αpsi+psichemical bondpsichemical bond/sup 2/-psichemical bondpsichemical bond/sup 4/=0, where psi(x, t) -> psi /sup +-/=const as x -> +- infinity. The analysis of the above equation linearized about the static bubble is reduced to an eigenvalue problem for two coupled Schroedinger operators. This problem is found to possess a bound state solution for all a. Cosequently, there exist exponentially growing perturbations, and motionless bubble appears to be always unstable. The dependence of the growth rate on a is numerically calculated. 14 refs.

24177 **(LA-UR—87-258) Propagation of near-infrasound over long ranges.** Mutschlecner, J.P.; Whitaker, R.W. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 39p. (CONF-8610228—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005095.

From Atmospheric and meteorological effects on low-frequency, long-range sound propagation; Albuquerque, NM, USA (27 Oct 1986).

This paper describes the results of basic research on the physics of infrasonic propagation, both for predictive purposes and signal interpretation. The following aspects were considered: (1) attenuation, (2) seasonal effects, (3) wave effects, (4) average velocity, (5) azimuth deviations, (6) coherence, and (7) surface effects. The primary region of interest was approximately 0.1 to Hz with corresponding wavelengths of 3000 to 30 meters. (ACR)

24178 **(NORDITA—85/9-Prepr.) On the quantum mechanical theory of stress and force.** Nielsen, O.H.; Martin, R.M. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). 1985. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751247.

The stress theorem presented previously by the present authors is derived in detail and is related to the virial and force theorems. Stress fields are considered in two alternative forms, which both give the same macroscopic stress and forces on nuclei when integrated over appropriate surfaces. A crucial concept is interactions that "cross" surfaces. Explicit forms of the stress field within the local-density approximation are given, together with a generalization of the approximate Liberman form for pressure. Reciprocal-

space expressions and ab-initio calculations are considered in detail in an accompanying paper.

24179 **(NORDITA—85/22-Prepr.) Pregeometric quantum lattice: A general discussion.** Lehto, M.; Nielsen, H.B.; Ninomiya, M. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). May 1985. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751242.

We put forward an idea that the fundamental, i.e. pregeometric, structure of spacetime is given by an abstract set, so called abstract simplicial complex ASC. Thus, at the pregeometric level there is no (smooth) spacetime manifold. However, we argue that the structure described by an abstract simplicial complex is dynamical. This dynamics is then assumed to ensure that ASC can be realized as a lattice on a four-dimensional manifold with the simplest topologies dominating.

24180 **(OEFZS-A—0899) Use of the Boltzmann-equation for calculating the scattering law in gases.** Eder, O.J.; Lackner, T.; Posch, M. (Oesterreichisches Forschungszentrum Seibersdorf G.m.b.H.). Nov 1986. 8p. (PH—432/86). Austrian Research Centre Seibersdorf, A-2444 Seibersdorf, Austria.

Limited distribution.

The incoherent scattering function in one dimension in a dilute gas mixture is derived from a model Boltzmann equation. For three dimensions the solution is given by an infinite continued fraction of infinite matrices of a special structure which allows an efficient numerical calculation of S/sub s/(q,w) and S(q,w). (G.Q.).

24181 **(UWThPh—1986-42) From free energy to entropy.** Narnhofer, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701608.

Several definitions for the entropy of subsystems are discussed. With the help of the corresponding free energy, it is argued that they give the same entropy density.

24182 **(UWThPh—1986-43) Free energy and the Kolmogorov-Sinai entropy of space translation.** Narnhofer, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701609.

The Kolmogorov-Sinai entropy is used in the variational principle of thermodynamics. It is shown that for lattice systems and short range interactions the corresponding equilibrium states are again the KMS-states and therefore KS-entropy of space translations and entropy density are the same. Finally some consequences for the third law of thermodynamics are discussed.

24183 **Quantum dynamics in a time-dependent variational approximation.** Cooper, F.; Pi, S.; Stancioff, P.N. (Department of Physics, Boston University, 590 Commonwealth Avenue, Boston, Massachusetts 02215). *Physical Review [Section] D: Particles and Fields;* **34**: No. 12, 3831-3841(15 Dec 1986).

The time-dependent variational method, which in many-body theory leads to the Hartree-Fock approximation, is here tested in quantum-mechanical models inspired by the physics of the inflationary universe. Some remarks about field-theoretic applications are also made.

24184 **Characterization of fat fractals in nonlinear dynamical systems.** Eykholt, R.; Umberger, D.K. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **57**: No. 19, 2333-2336(10 Nov 1986).

Fat fractals (sets with fractal structure, but nonzero measure) are becoming increasingly important in the study of nonlinear dynamical systems. Since fat fractals are not well characterized by their (integer) dimensions, several scaling exponents have been proposed to characterize these sets, and there has been some debate over which exponent is best. We shed light on this issue by examining these exponents and finding relationships between them. Finally, these results lead naturally to quantitative definitions of the notions of sensitivity to parameters and final-state sensitivity.

24185 **Monotone piecewise bicubic interpolation.** Carlson, R.E.; Fritsch, F.N. (Lawrence Livermore National Lab., CA). *SIAM (Society for Industrial and Applied Mathematics) Journal on Numerical Analysis;* **22**: No. 2, 386-400(Apr 1985). Contract W-7405-ENG-48.

In a 1980 paper the authors developed a univariate piecewise cubic interpolation algorithm which produces a monotone interpolant to monotone data. This paper is an extension of those results to monotone script C^1 piecewise bicubic interpolation to data on a rectangular mesh. Such an interpolant is determined by the first partial derivatives and first mixed partial (twist) at the mesh points. Necessary and sufficient conditions on these derivatives are derived such that the resulting bicubic polynomial is monotone on a single rectangular element. These conditions are then simplified to a set of sufficient conditions for monotonicity. The latter are translated to a system of linear inequalities, which form the basis for a monotone piecewise bicubic interpolation algorithm. 4 references, 6 figures, 2 tables.

24186 **n-Series problems and the coupling of electromagnetic waves to apertures: a Riemann-Hilbert approach.** Ziolkowski, R.W. (Lawrence Livermore National Lab., CA). *SIAM Journal on Applied Mathemadics;* **16**: No. 2, 358-378(Mar 1985). Contract W-7405-ENG-48.

An effective approach to the solution of a large class of mixed boundary value problems (those reducible to an n-series problem) is developed. The method is based on the deduction of the equivalent Riemann-Hilbert problem and its solution. This generalized n-series approach leads to analytical descriptions of the coupling of electromagnetic waves through apertures in canonical structures into open or enclosed regions. In particular, it is applied to the canonical problem of plane wave coupling to an infinite circular cylinder with multiple infinite axial slots. Numerical results for currents induced by an H-polarized plane wave on a circular cylinder with a single slit are given. 9 references, 3 figures.

24187 **Block preconditioning for the conjugate gradient method.** Concus, P.; Golub, G.H.; Meurant, G. (Univ. of California, Berkeley). *SIAM Journal on Scientific and Statistical Computing;* **6**: No. 1, 220-252(Jan 1985). Contract AC03-76SF00098;AC03-76SF00515.

Block preconditioning for the conjugate gradient method are investigated for solving positive definite block tridiagonal systems of linear equations arising from discretization of boundary value problems for elliptic partial differential equations. The preconditioning rest on the use of sparse approximate matrix inverses to generate incomplete block Cholesky factorizations. Carrying out of the factorizations can be guaranteed under suitable conditions. Numerical experiments on test problems for two dimensions indicate that a particularly attractive preconditioning, which uses special properties of tridiagonal matrix inverses, can be computationally more efficient for the same computer storage than other preconditionings, including the popular point incomplete Cholesky factorization. 22 references, 6 figures, 12 tables.

24188 **Necessary and sufficient conditions for the existence of a conjugate gradient method.** Faber, V.; Manteuffel, T. (Los Alamos National Lab., NM). *SIAM (Society for Industrial and Applied Mathematics) Journal on Numerical Analysis;* **21**: No. 2, 352-362(Apr 1984).

The authors characterize the class CG(s) of matrices A for which the linear system $Ax = b$ can be solved by an s-term conjugate gradient method. The authors show that, except for a few anomalies, the class CG(s) consists of matrices A for which conjugate gradient methods are already known. These matrices are the Hermitian matrices, $A^* = A$, and the matrices of the form A = e/sup i theta/(dI + B), with $B^* = -B$. 7 references.

24189 **Construction of one unstable manifold for the dissipative Henon mapping.** Valkering, T. (Twente Univ. of Technology, Enschede, Netherlands). *Journal of Physics A: Mathematical and General;* **17**: 3135-3142(1984). Contract AC03-77ER01538.

The unstable manifold of a saddle point of the Henon mapping is constructed analytically via a contraction mapping, for a

range of parameter values where the second fixed point is a stable node. One invariant piece of this manifold connects the saddle with the second fixed point. Rigorous error bounds are derived for each step of the iterative procedure. It is demonstrated that an algebraic approximation with known accuracy can be given of the unstable manifold. 11 references, 3 figures.

24190 **Linearization of second-order nonlinear oscillation theorems.** Kwong, M.K.; Wong, J.S.W. (Argonne National Lab., IL). *Transactions of the American Mathematical Society;* 279: No. 2, 705-722(Oct 1983). Contract W-31-109-ENG-38.

The problem of oscillation of super- and sublinear Emden-Fowler equations is studied. Established are a number of oscillation theorems involving comparison with related linear equations. Recent results on linear oscillation can thus be used to obtain interesting oscillation criteria for nonlinear equations. 25 references.

70 FUSION ENERGY

24191 **(DOE/OR/00033—T255) Magnetic Fusion Energy Technology Fellowship Program: Summary of program activities for calendar year 1985.** (Oak Ridge Associated Universities, Inc., TN (USA)). 1985. Contract AC05-76OR00033. 134p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87004882.

This report summarizes the activities of the US Department of Energy (DOE) Magnetic Fusion Energy Technology Fellowship program (MFETF) for the 1985 calendar year. The MFETF program has continued to support the mission of the Office of Fusion Energy (OFE) and its Division of Development and Technology (DDT) by ensuring the availability of appropriately trained engineering manpower needed to implement the OFE/DDT magnetic fusion energy agenda. This program provides training and research opportunities to highly qualified students at DOE-designated academic, private sector, and government magnetic fusion energy institutions. The objectives of the Magnetic Fusion Energy Technology Fellowship program are: (1) to provide support for graduate study, training, and research in magnetic fusion energy technology; (2) to ensure an adequate supply of appropriately trained manpower to implement the nation's magnetic fusion energy agenda; (3) to raise the visibility of careers in magnetic fusion energy technology and to encourage students to pursue such careers; and (4) to make national magnetic fusion energy facilities available for manpower training.

24192 **(DOE/OR/00033—T275) Magnetic Fusion Science Fellowship program: Summary of program activities for calendar year 1986.** (Oak Ridge Associated Universities, Inc., TN (USA)). 1986. Contract AC05-76OR00033. 33p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87005963.

This report describes the 1985-1986 progress of the Magnetic Fusion Science Fellowship program (MFSF). The program was established in January of 1985 by the Office of Fusion Energy (OFE) of the US Department of Energy (DOE) to encourage talented undergraduate and first-year graduate students to enter qualified graduate programs in the sciences related to fusion energy development. The program currently has twelve fellows in participating programs. Six new fellows are being appointed during each of the program's next two award cycles. Appointments are for one year and are renewable for two additional years with a three year maximum. The stipend level also continues at a $1000 a month or $12,000 a year. The program pays all tuition and fee expenses for the fellows. Another important aspect of the fellowship program is the practicum. During the practicum fellows receive three month appointments to work at DOE designated fusion science research and development centers. The practicum allows the MFSF fellows to directly participate in on-going DOE research and development programs.

24193 **(DOE/OR/00033—T285) Fusion Energy Postdoctoral Research Program and Professional Development Program: FY 1986 annual report.** (Oak Ridge Associated Universities, Inc., TN (USA)). Jan 1987. Contract AC05-76OR00033. 23p. NTIS MF A01; 2; GPO Dep. File Number DE87006350.

During FY 1986, Oak Ridge Associated Universities (ORAU) initiated two new programs for the US Department of Energy (DOE), Office of Fusion Energy (OFE). The Fusion Energy Postdoctoral Research Program and the Fusion Energy Professional Development Program provide opportunities to conduct collaborative research in magnetic fusion energy research and development programs at DOE laboratories and contractor sites. Participants become trained in advanced fusion energy research, interact with outstanding professionals, and become familiar with energy-related national issues while making personal contributions to the search for solutions. Both programs enhance the national fusion energy research and development effort by providing channels for the exchange of scientists and engineers, the diffusion of ideas and knowledge, and the transfer of relevant technologies. These programs complement the Magnetic Fusion Energy Science and Technology Fellowship Programs already administered by ORAU for DOE/OFE.

7001 Plasma Research

REFER ALSO TO CITATION(S) 23797, 23799, 24144, 24297, 24338

24194 **(DOE/ER/40091—T3) Colorado School of Mines fusion gamma ray project: Annual progress report.** Cecil, F.E. (Colorado School of Mines, Golden (USA). Dept. of Physics). 22 Dec 1986. Contract AC02-83ER40091. 27p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006660.

A multifaceted study was made at PPPL of the gamma ray energy spectra and count rates on TFTR during Ohmic and neutral beam heated deuterium and ^{3}He plasmas. These measurements were made at neutron source strengths up to about 6 x 10^{15} neutrons per second during some of the record setting "super shots" achieved on TFTR during early July. During the course of a series of deuterium neutral beam heated ^{3}He plasmas, we observed the 16.6 MeV gamma ray from the d(^{3}He,γ)^{5}Li direct capture reaction using a large volume NE226 liquid scintillator detector. Preliminary measurements were made on TFTR of the flux of 14 MeV neutrons during deuterium discharges resulting from the burn-up of the 1 MeV tritons from the d-d reactions. The measured yield of the 14 MeV neutrons was found to be generally low when compared to the predicted yield. The use of alpha particle induced nuclear reactions as the basis of a diagnostic of fast confined and escaping alpha particles is described.

24195 **(DOE/ER/52127—11) Modeling and transport simulations of F - θ pumping in the RFP.** Scardovelli, R.A.; Nebel, R.A.; Werley, K.A.; Miley, G.H. (Illinois Univ., Urbana (USA). Fusion Studies Lab.; Los Alamos National Lab., NM (USA)). 1986. Contract FG02-86ER52127. 28p. (CONF-860459—1-Vugraphs). NTIS, PC A03. File Number DE87006230.

From Sherwood theory meeting; New York, NY, USA (13 Apr 1986).

The necessity of m=1 modes for current drive has been shown in cylindrical geometry by using Faraday's and Ohm's laws and regularity conditions on the magnetic axis. An m=1 tearing mode that generates poloidal flux (necessary for current drive) has been identified in the form of an unstable off-axis parallel current peak. A 1-D analytical model based on the Kadomtsev reconnection model has been developed to describe the effects of this instability. A scoping of the F - θ space has been performed using a polynomial expansion for the parallel current profile, a linear resistive stability code and the 1-D reconnection model to find where this mode is unstable, the relative increase of poloidal flux and the size of the reconnecting region. A comparison between 1-D plasma transport simulations and the results from the F - θ pumping experiment, currently under way on ZT-40M at Los Alamos, will be presented.

24196 (EUR—9708-Vol.1, pp 13-38) **Resistively heated plasmas in JET: characteristics and implications.** Gibson, A. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

A brief description is given of the JET tokamak experiment and its programme. The prospects for fusion research with JET are examined in the light of present tokamak experience and of the first data from JET itself. Initial results with ohmic plasmas in JET are presented and discussed.

24197 (EUR—9708-Vol.1, pp 39-66) **PPPL Tokamak program.** Furth, H.P. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The economic prospects of the tokamak are reviewed briefly and found to be favourable -- if the size of ignited tokamak plasmas can be kept small and appropriate auxiliary systems can be developed. The main objectives of the Princeton Plasma Physics Laboratory tokamak program are: (1) exploration of the physics of high-temperature toroidal confinement, in TFTR; (2) maximization of the tokamak beta value, in PBX; (3) development of reactor-relevant rf-techniques, in PLT.

24198 (EUR—9708-Vol.1, pp 67-96) **Confinement regimes in ohmically and auxiliary heated tokamaks.** Gruber, O. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The confinement behaviour of ohmically and beam heated tokamaks is described. Anomalous electron thermal transport is dominating in low density ohmic as well as "L" and "H" type beam heated plasmas. It leads however for these regimes to different scaling laws of both the local thermal conductivities and the global energy confinement times, which are derived from the results of numerous experiments. At high density ohmic discharges the neoclassical ion heat conductivity dominates the energy balance. Though the particle diffusion is anomalous, convective energy losses are small. Extrapolation to tokamak reactor systems indicates a necessity to reach the high confinement "H"-mode found in beam heated divertor tokamaks for achieving sufficiently high antin . tausub(E) values.

24199 (EUR—9708-Vol.1, pp 97-122) **Nature of disruptions.** Laurent, L. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Detailed investigations of the MHD activity during minor and major disruptions show clearly that the destabilization of several modes of different helicities causes a flattening of the electron temperature profile at the edge of the discharge. The transition from minor to major disruption is accompanied by an enhancement of the magnetic turbulence, while the energy confinement time decreases drastically. In both types of disruptions the presence of the ergodic zone seems to trigger an helical displacement of the hot region of the plasma which could be related to the temperature quenching in the discharge center. During the current quenching after a major disruption a part of the stored magnetic energy is dissipated in the center of a post-disruptive plasma. It is shown that the energy loss in the bulk of the plasma can be due to the presence of a significant magnetic turbulence ergodizing the magnetic field lines, while radiation and charge-exchange are dominant at the edge. The tokamak discharge then behaves as a natural ergodic divertor during the current quenching, provided the plasma discharge is clean enough so that the power balance at the plasma center is not dominated by impurity radiation.

Stable high beta plasmas are required for the tokamak to attain an economical fusion reactor. Recently, intense neutral beam heating experiments in tokamaks have shown new effects on plasma stability and confinement associated with high beta plasmas. The observed spectrum of MHD fluctuations at high beta is clearly dominated by the $n = 1$ mode when the $q = 1$ surface is in the plasma. The $m/n = 1/1$ mode drives other $n = 1$ modes through toroidal coupling and $n > 1$ modes through nonlinear coupling. On PDX, with near perpendicular injection, a resonant interaction between the $n = 1$ internal kink and the trapped fast ions results in loss of beam particles and heating power. Key parameters in the theory are the value of qsub(o) and the injection angle. High frequency broadband magnetic fluctuations have been observed on ISX-B and D-III and a correlation with the deterioration of plasma confinement was reported. During enhanced confinement (H-mode) discharges in divertor plasmas two new edge instabilities were observed, both localized radially near the separatrix. By assembling results from the different tokamak experiments, it is found that the simple theoretical ideal MHD beta limit has not been exceeded.

24201 (EUR—9708-Vol.1, pp 157-175) **On the tokamak β - values limited by ideal MHD-stability.** Degtyarev, L.M.; Drozdov, V.V.; Martynov, A.A.; Medvedev, S.Y. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

A numerical procedure for determining the tokamak plasma pressures limited by the ideal MHD stability is proposed. The limiting β - values are considered in dependence on the aspect ratio, the plasma cross-section geometry and the safety factor at the plasma boundary.

The complete set of hydromagnetic equations is transformed into potential form appropriate for numerical solution in toroidal

geometry. The magnetic quantities are described by the evolution equations for the poloidal and toroidal flux densities and a gauge variable; in order to reconstruct the poloidal vector potential with a certain boundary condition one has to solve two Poisson equations at every time step. A similar decomposition of the momentum balance equation is also obtained, leading to two additional Poisson equations for fluid potentials. Finally, the scaling laws previously used for the case of small toroidicity are found to require an artificial pressure law; the conclusion is then that up to now the nonlinear time-dependent hydromagnetic equations have not yet been properly solved in toroidal geometry.

24203 (EUR—9708-Vol.1, pp 189-205) **Resistive MHD modes and relaxation in Tokamak plasmas.** Kaw, P.K. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

In this paper we shall discuss two separate topics related to resistive MHD modes in tokamaks. In the first part we review some recent work on the stabilizing effect of temperature gradients and finite parallel electron thermal conductivity on resistive tearing and ballooning modes in a tokamak plasma. In the second half, we present a new model of relaxation of toroidal discharges, which is applicable to tokamaks.

24204 (EUR—9708-Vol.1, pp 209-224) **Effects of the alfven wave spectrum in heating experiments in TCA.** Appert, K.; de Chambrier, A.; Collins, G.A. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Reduction of the metallic impurity concentration in the TCA plasma has enabled us to correlate the observed heating with the calculated position where the RF energy is deposited. In modelling the measured antenna loading due to the presence of Alfven resonance surfaces, and hence inferring the energy deposition profile, both ion cyclotron effects and the toroidal geometry must be considered. In particular, toroidicity couples energy to resonance surfaces that would not be excited in cylindrical geometry. The increase in electron density during a RF pulse changes the positions of these surfaces so that spectrum-related effects may be observed. The appearance of a new surface at the centre of the plasma is seen as a sharp discontinuity on many of the macroscopic parameters, accompanied by evidence of changes in the current density profile. These results, and the predictions of numerical codes, have imposed new constraints on the optimisation of our antenna system.

24205 (EUR—9708-Vol.1, pp 225-245) **Experiments on lower hybrid current drive and heating on Petula B.** Melin, G.; Agarici, G.; Blanc, P. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The application of Lower Hybrid (LH) waves in Petula B has so far demonstrated the efficiency of ion heating, in D_2 plasmas. At low density, most of the plasma current can be replaced and a current drive efficiency etasub(CD)=1.5 10^{13} kA.cm^{-3}/kW is achieved at antinsub(e) < 1.8 10^{13} cm^{-3} in D_2 plasmas with a zero loop voltage. The paper gives a review of recent physics studies. For ion heating, the dependence of the heating with the density and the plasma current is presented. The limitations of the ion heating at high density and the impurity pollution are discussed. For HF current drive discharges, the HF current drive efficiency, the behavior of the fast electron population supporting the HF current are examined. Then a few results of the MHD activity studies and the stabilization effect of the HF power, and finally a tentative global energy balance of the HF sustained discharges, are presented.

24206 (EUR—9708-Vol.1, pp 247-258) **Consistent and non-consistent quasilinear models of lower-hybrid current drive.** Succi, S.; Vaclavik, J.; Appert, K. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Some theoretical aspects related to the problem of current generation by lower-hybrid waves are discussed. In particular, the influence of the spectral distribution of the rf power source and the effects of the anomalous Doppler interaction on the current generation are investigated.

24207 (EUR—9708-Vol.1, pp 259-270) **ECRH and plasma transport in T-10 Tokamak.** Alikaev, V.V.; Strelkov, V.S. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

In the experiments in T-10 ECRH of plasma was studied, when a position of the absorption zone at the cross-section of the plasma column was varied by a change in the magnetic field. The possibility of varying the temperature profile by variation in the position of a heated zone has been shown. Experiments on heating of the plasma with a density higher than the critical one, at the centre of the plasma column, have been done. A possibility of stabilizing or destabilizing MHD-oscillations is shown, when the power is deposited near the q=2 surface. A possibility of changing the electron temperature is used for the analysis of electron heat conduction dependence on temperature.

24208 (EUR—9708-Vol.1, pp 271-284) **Electron cyclotron resonance heating on the W VII A-stellarator.** Wilhelm, R.; Erckmann, V.; Janzen, G. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Plasma build-up and heating of OH-current free plasmas by ECR-wave irradiation were investigated on the WENDELSTEIN VII-A stellarator using three kinds of wave launching: direct irradiation of the gyrotron modes from the low field side, or advanced wave launching in 0-mode polarization from the low field side, the nonabsorbed fraction being reflected back to the plasma from the high field side in X-mode polarization. An increase of the central electron temperature from 0.7 keV (TE_{02} mode) to 1.2 keV (TE_{11}, HE_{11} mode) was observed which is explained by the narrow and well centred power deposition profiles for TE_{11}, HE_{11} modes. However, there is only a slight increase of the heating efficiency from 40% to 50%. The reflected X-mode fraction does not contribute to bulk plasma heating via Bernstein wave conversion and absorption as expected. The reason seems to be local absorption of the arising electron Bernstein waves due to a macroscopically turbulent structure around the upper hybrid resonance layer. Correlated with X-mode irradiation direct ion heating was observed (500

eV ion tail), possibly due to low frequency decay waves. In all ECRH experiments a toroidal plasma current was generated due to asymmetrically confined fast electrons. Optimum confinement in the shearless l=2 configuration was achieved at most irrational values of the rotational transform with small toroidal net current. It can be concluded from a numerical 1D-transport analysis that neoclassical electron confinement seems to be dominant in the hot central plasma core.

(CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The experimental results on plasma heating by virtue of a collective REB-plasma interaction are presented. The measured data concerning the energy and angular spread of the beam after its interaction with a plasma are given. These data enable one to estimate the energy density of resonance Langmuir oscillations. Heating of the bulk of plasma electrons has been studied by means of the 90° Thompson scattering. The total energy density of high-frequency oscillations has been estimated under the assumption that this heating occurs because of the collisional damping of Langmuir oscillations. Heating of the electrons with the energies E > approximately 0.5 keV has been analysed by means of the 8° Thompson scattering, X-ray diagnostics and multifoil analysis. The results obtained offer the possibility of determining the character of the distribution function of heated plasma electrons in a wide energy range: 0+100 keV. It is shown that the main fraction of the energy left by the REB in a plasma is delivered to the electrons with E < 10 keV. The latter are likely to be produced as a result of the collisionless damping of plasma waves with $\lambda \gg \omega$ p/C.

24210 (EUR—9708-Vol.1, pp 311-337) **Status of stellarator research.** Wobig, H. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

In recent years main activities in stellarator research were focussed on production and investigation of currentless plasmas. Several heating methods have been applied: electron cyclotron heating, ion cyclotron heating and neutral beam injection. The parameters achieved in HELIOTRON E and W VII-A are: antin <= 10^{20} m^3, Tsub(i) <= 1 keV. The confinement is improved as compared with ohmically heated discharges. By ECRH (P = 200 kW) it is possible to heat electrons up to 1.4 keV, confinement in this regime is dominated already by trapped particle effects. Toroidal currents up to 2 kA - either bootstrap currents or externally driven currents - were observed. High β-values (antiβ = 2%) have been obtained in HELIOTRON E, in this regime already pressure driven MHD-modes were observed. Future experiments (ATF-1 and W VII-AS) will extend the parameter regime to temperatures of several keV. These experiments will give important information about critical problems of the stellarator line (β-limit, neoclassical confinement impurity transport). A few reactor studies of stellarators exist, attention is mainly concentrated on technical problems of the modular coil system.

24211 (EUR—9708-Vol.1, pp 359-391) **Physics issues in mirror and tandem mirror systems.** Post, R.F. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Over the years the study of the confinement of high temperature plasma in magnetic mirror systems has presented researchers with many unusual physics problems. Many of these issues are by now understood theoretically and documented experimentally. With the advent of the tandem mirror idea, some new issues have emerged and are now under intensive study. These include: (1) the generation and control of ambipolar confining potentials and their effect on axial confinement and, (2) the combined influence of non-axisymmetric magnetic fields (used to ensure MHD stability) and electric and magnetic particle drifts on radial transport. Physics considerations associated with these two categories of issues will be reviewed, including concepts for the control of radial transport, under study or proposed.

24212 (EUR—9708-Vol.1, pp 393-415) **Recent experimental progress in the TMX-U thermal barrier tandem mirror experiment.** Turner, W.C.; Allen, S.L.; Casper, T.A. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Recent experiments on the TMX-U thermal barrier device at LLNL have achieved the end plugging of axial ion losses up to a central cell density of nsub(c) = 2 x 10^{13} cm. During these tests, the axial potential profile characteristic of a thermal barrier has been measured experimentally, indicating an ion-confining potential greater than 1.5 kV and a potential depression of 0.45 kV in the barrier region. The average beta of hot electrons in the thermal barrier has been increased to 15% and appears limited only by classical scattering and ECRH pulse duration. Furthermore, deuterium ions in the central cell have been heated with ICRF to an average energy of 1.5 keV, with a heating efficiency of 40%. During strong end plugging, the axial ion confinement time reached 50 to 100 ms while the nonambipolar radial ion confinement time was 5 to 15 ms--independent of end plugging. Radial ion confinement time exceeding 100 ms has been attained on shots without end plugging. Plates, floated electrically on the end walls, have increased the radial ion confinement time by a factor of 1.5.

24213 (EUR—9708-Vol.1, pp 417-453) **Physics of Reversed Field Pinch.** Bodin, H.A.B. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion Programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Taylor's theory of relaxed states, which defines relaxed Reversed Field Pinch equilibria independently of the mechanism of relaxation is briefly reviewed. An account is then given of a number of mechanisms put forward to explain relaxation and reversed field generation, processes which can also lead to anomalous transport. Finally, studies of fluctuations in the HBTX1A Reversed Field Pinch using edge coils, insertable probes and surface barrier diode X-ray detectors are described in which a variety of unstable modes are identified. The questions of the origin of these modes, their possible role in relaxation and field generation and their effect on transport is discussed in a preliminary fashion.

24214 **(EUR—9708-Vol.1) Proceedings of the 1984 International Conference on plasma physics.** Tran, M.Q.; Verbeek, R.J. (eds.). (Commission of the European Communities, Luxembourg). 1985. 549p. (CONF-840616—Vol.1). NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134.

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The 1984 ICPP, held in Lausanne, Switzerland, is the third biennial conference of the series "International conferences on plasma physics". A complete spectrum of current plasma physics from fusion devices to interstellar space was presented, even if most of the papers were of direct interest for fusion. The conference stressed the important role that "basic plasma physics" must play in fusion research. Recent theoretical and experimental developments in tokamaks, stellarators, mirrors, reversed field pinches, and other fusion devices were reported. The successful operation of two newly-built large tokamak devices, JET and TFTR, holds the promise that a host of new results of decisive importance for fusion research will become available in the next few years. This is the first part of the conference.

24215 (EUR—9708-Vol.1, pp 455-471) **Physics of Reversed-Field Pinch profile sustainment.** Moses, R.W. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

A description of the Reversed-Field Pinch (RFP) is given. There is experimental evidence that indicates that an RFP dynamo effect sustains field reversal in steady state. Three sustainment mechanisms are reviewed: the MHD model, the tangled discharge model, and the kinetic dynamo model. The relationship of these models to each another is discussed briefly.

24216 (EUR—9708-Vol.1, pp 473-495) **Rotating magnetic field technique of driving current and its application in the Rotamak.** Jones, I.R. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Two topics are discussed in this paper: the rotating magnetic field method of driving plasma current and its application in the generation of a compact torus configuration known as the Rotamak. In the discussion of the rotating magnetic field technique, the conditions necessary for the achievement of current drive are listed and a description is given of the basic physical mechanism underlying the method. A general description of a typical Rotamak device is provided together with results obtained in a high power (12 MW), short duration (approximately 80 μsec) experiment and a new, moderately high power (180 kW), long duration (40 msec) experiment. In both experiments, stable compact torus equilibria are produced in a straightforward manner.

24217 (EUR—9708-Vol.1, pp 499-513) **Comparison of electrical conductivities derived from measured current density distributions and electron temperature profiles in the TEXTOR Tokamak.** Soltwisch, H.; Graffmann, E.; Schlueter, J.; Waidmann, G. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Radial profiles of the electrical conductivity in TEXTOR were determined independently from experimental Tsub(e)-profiles and Zsub(eff)-distributions using Spitzer's formula and neoclassical theory, and from measured current density profiles and the loop voltage. A detailed comparison of the results clearly favours neoclassical theory over pure Spitzer conductivity, although the combined errors of the measurements prevent an unambiguous decision. Tsub(e)-profiles were obtained by observing the soft X-ray continuum radiation simultaneously along five chords and by Thomson scattering at seven points of the vertical plasma diameter. In addition Tsub(eo) was measured continuously by electron cyclotron emission diagnostics. Zsub(eff)-values at three radial positions were determined from soft X-ray line and continuum intensities. Currrent density distributions and nsub(e)-profiles were derived from phase shift and Faraday rotation measurements using a nine-channel far-infrared interferometer/polarimeter.

24218 (EUR—9708-Vol.1, pp 515-533) **Two novel plasma diagnostic tools: fiber sensors and phase conjugation.** Jahoda, F.C. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

A rapidly developing technology (single-mode optical fiber sensors) and recent fundamental research in nonlinear optics (phase conjugation) both offer opportunities for novel plasma diagnostics. Single-mode fiber sensors can replace electrical wire probes for current and magnetic field measurements with advantages in voltage insulation requirements, electromagnetic noise immunity, much greater bandwidth, and some configuration flexibility. Faraday rotation measurements through fibers wound on the ZT-40M RFP have demonstrated quantitative results, but competing linear birefringence effects still hinder independent interpretation. Twisted fiber may solve this problem. Optical phase conjugation (in which a phase reversed copy of a laser beam is generated) allows real time distortion corrections in laser diagnostics. Self-pumped phase conjugation in $BaTiO_3$ improves the quality of phase conjugation imagery and greatly simplifies experimentation directed toward plasma diagnostics. Our initial applications are a) time-differential refractometry with high spatial resolution and b) intracavity absorption Zeeman spectroscopy.

24219 (EUR—9708-Vol.1, pp 535-546) **Enhanced microwave scattering and its application for plasma diagnostics.** Piliya, A.D. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A23/MF A01. File Number DE87751134. (CONF-840616—Vol.1).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

A diagnostic method based on microwave scattering from a hybrid resonance region is discussed. Experiments using this method for study of a parametric instability in an inhomogeneous plasma and for detecting lower hybrid wave are presented.

24220 **(EUR—9708-Vol.2) Proceedings of the 1984 international conference on plasma physics.** Tran, M.Q.; Verbeek, R.J. (eds.). (Commission of the European Communities, Luxembourg). 1985. 611p. (CONF-840616—Vol.2). NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132.

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The 1984 ICPP, held in Lausanne, Switzerland, is the third biennial conference of the series "International conferences on plasma physics". A complete spectrum of current plasma physics from fusion devices to interstellar space was presented, even if most of the papers were of direct interest for fusion. This is the second part of the conference.

24221 (EUR—9708-Vol.2, pp 555-574) **Formation of electrostatic potential in a magnetized plasma.** Sato, N. (Tohoku Univ., Sendai, Japan. Dept. of Electronic Engineering). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

A short review is presented of some recent basic laboratory experiments on formation of electrostatic potentials in strongly magnetized plasmas. A special emphasis is on electric double layers and related dynamics of potential wells formed in a nondischarge collisionless plasma. A magnetic mirror is found to have a big effect on the double layers. The V(or U)-shape double layer is shown to be responsible for generation of electrostatic instabilities around harmonics of ion cyclotron frequency. A stable potential well, so called "thermal barrier", is demonstrated to be formed between two plasmas with different electron temperatures. A few remarks are also made on preliminary measurements of electrostatic potentials formed in a plasma flowing along mirror-type configurations of magnetic field.

24222 (EUR—9708-Vol.2, pp 575-592) **Convective cell experiments.** Sugai, H. (Nagoya Univ., Japan. Dept. of Electrical Engineering). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

External excitation of convective cells is performed both in a fully ionized plasma(Q-device) and in a steady-state toroidal plasma. Field-aligned absorption or injection of electrons by external pulses gives rise to the convective cells with positive or negative polarity. The space-time evolution of convective cells is investigated by two-dimensional potential mapping. A positive convective cell formed in a plasma flow is observed to drift, to elongate by the velocity shear, and to yield a new negative cell. Effects of ion viscosity on the damping and the size of convective cells are found in an endless "toroidal" convective cell. The other damping processes such as geometrical damping, turbulent damping, ion-neutral collisions, end effects are discussed. Cell-cell interactions are investigated by exciting two cells simultaneously. A possibility of coalescence of two cells with same polarity is demonstrated.

24223 (EUR—9708-Vol.2, pp 593-624) **Experiments on Langmuir wave collapse.** Wong, A.Y.; Cheung, P.Y. (California Univ., Los Angeles, USA. Dept. of Physics). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

We present experimental evidence of Langmuir collapse, an important process in the hierarchy of highly nonlinear plasma interactions. The primary Langmuir wave was excited by a cold electron beam in a homogeneous plasma. The temporal and spatial development of the collapse process is described with quantitative comparison against theoretical predictions of collapse rate and threshold. Bursts of electrostatic and electromagnetic waves support the picture of collapse and their detailed frequency spectra agree with the growth of density cavities. New data on spatial and temporal recurrence in such strongly turbulent systems are presented, the recurrent period being determined by the ion density relaxation time. Finally the probable roles of cavitons and clumps are discussed and new kinetic effects are proposed to complete our understanding of the nonlinear hierarchy.

24224 (EUR—9708-Vol.2, pp 625-640) **Soliton resonance and related phenomena in plasmas.** Yajima, N. (Kyushu Univ., Kasuga, Japan. Research Institute for Applied Mechanics). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Summary report is presented to recent advancements in soliton research in plasma physics. Especially, the resonance phenomena in two dimensional interaction of ion-acoustic solitons and the nonlinear coupled explosive mode of slow ion-acoustic wave in an ion-beam plasmas are discussed.

24225 (EUR—9708-Vol.2, pp 641-663) **Harmonic emission from the quarter critical density surface of laser-produced plasmas.** Barr, H.C. (Wales Univ., Bangor, UK). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Harmonic emission at one half or three halves the laser frequency is evidence for the generation of plasmons near the quarter critical density surface. Such electron plasma waves are generated by either the Raman of two-plasmon decay instabilities. Observations show characteristic double peaked spectra at both harmonics for which there exist a variety of interpretations.

24226 (EUR—9708-Vol.2, pp 665-678) **Gyrotrons and plasma investigations.** Goldenberg, A.L.; Litvak, A.G. (Academy of Sciences of the USSR, Gorky). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The powerful millimeter-wave radiation of gyrotrons possesses some properties owing to which new plasma investigations have been started. Gyrotrons provide plasma heating at electron-cyclotron resonance, as well as pre-ionization and plasma diagnostics in large nuclear fusion installations. The wave beams of millimeter-wave radiation of gyrotrons are applied for studying the phenomena of gas discharge and thermal self-focusing and clearing in plasma. The results of the investigations are discussed.

(Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

To illustrate the development of some fundamental concepts in plasma waves, a number of experimental observations, going back over half a century, are reviewed. Particular attention is paid to the phenomena of dispersion, collisionfree damping, finite-Larmor-radius and cyclotron and cyclotron-harmonic effects, nonlocal response, and stochasticity. One may note not only the constructive interplay between observation and theory and experiment but also that major advances have come from each of the many disciplines that invoke plasma physics as a tool, including radio communication, astrophysics, controlled fusion, space physics, and basic research.

(CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

There has been very considerable progress in the past few years on the theory of two conservative, coupled, nonlinear oscillators. This work also applies to many equivalent systems, so it has applications to particle containment and heating, for example, and wherever else in plasma physics that the validity of adiabatic invariants is a matter of concern. A general problem of this class has a solution that is so complicated that it is impossible to find an expression for the state of the system that is valid for all time. However, recent results are making it possible to determine the next most useful type of information. This is the asymptotic behavior of individual orbits in the limit of very long times. This is just the information that is desired in many situations. For example, it determines the stability of the motion. The key to our present understanding is renormalization. The present state of the art has been described in Robert Mackay's thesis, for which this is an advertisement.

24230 (EUR—9708-Vol.2, pp 837-853) **Beat Wave and Surfatron Accelerator of particles.** Dawson, J.M. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The possibility of using intense plasma waves to accelerate particles to high energy is discussed. This is of interest because of the very intense electric fields that can be generated and the fact that the phase velocity can be essentially the speed of light. Particular attention is given to generating the waves by two intense laser beams with frequency difference equal to the plasma frequency (Beat Wave Accelerator) and using magnetic fields to maintain phase coherence of the accelerated particles with the plasma wave (Surfatron Accelerator). Results of extensive numerical simulation are given. Some of the advantages, disadvantages and important questions for these acceleration mechanisms are discussed.

24231 (EUR—9708-Vol.2, pp 855-875) **Wave particle interactions and plasma turbulence theory.** Laval, G.; Pesme, D. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

An introduction to several theories describing wave-particle interactions is presented; various concepts corresponding to different issues are made precise, namely resonant particles interaction with normal modes or ballistic modes, weak and strong nonlinear effects, quasi-Gaussian or self-consistent field theories, weak coupling of linear or nonlinear objects. The specific features of the clump theory and of the turbulent trapping model are displayed with a particular emphasis on their respective domain of applicability; their connection with the direct interaction approximation is discussed.

24232 (EUR—9708-Vol.2, pp 877-904) **Double stimulated scattering and the development of the theory of parametric instabilities in plasmas.** Silin, V.P.; Tikhonchuk, V.T. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The coherent structure of electromagnetic fields in plasma in the reason of for the new features of parametric instabilities. Such coherent structure connected with the reflection surface of the electromagnetic waves produces the distributed feedback. Because of this feedback the number of the interacting electromagnetic waves in the processes of stimulated scattering in twice more than usually. Such double stimulated scattering processes are connected with absolute parametric instabilities. The examples of double stimulated Mandelstam-Brillouin scattering, double combination (Raman) scattering and parametric decay are discussed.

24233 (EUR—9708-Vol.2, pp 905-920) **Anomalous plasma resistivity and ion-acoustic turbulence.** Silin, V.P. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Short review is given of the analytical theory of ion-acoustic turbulence that takes into account the stimulated ion wave scattering by the ions as a non-linear effect and the quasilinear electron scattering by the ion-acoustic turbulent fluctuations. Such theory gives the description of the quasistationary plasma state with moderate level of turbulent pulsations and anisotropic electron distribution. The theory permits to obtain the anomalous laws for the electron current, for the electron heat flux and for electron temperature relaxation. The role of the symmetric part of the electron distribution function is discussed. Our theory describes the switch off the anomalous resistivity in the strong magnetic field limit.

24234 (EUR—9708-Vol.2, pp 921-946) **Renormalized theory of nonlinear fluctuations and plasma turbulence.** Sitenko, A.G.; Sosenko, P.P. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

The general statistical approach is applied to derive basic equations of the renormalized statistical theory describing plasma turbulence. Second- and third-order terms with respect to the fluctuation intensity are taken into account. Both potential and nonpotential electromagnetic fluctuations are considered. Response functions and the nonlinear dielectric permittivity of the plasma are found. The equations are factorized and thus the collective effects are separated out. The passage to the weak-turbulence limit is discussed. The fluctuation-dissipation theorem is formulated in terms of the renormalized quantities. The general formalism is applied to describe low-frequency plasma excitations under the influence of a strong magnetic field. Stationary spectra of convective and drift excitations are calculated for various turbulent regimes and anomalous transport coefficients are found.

24235 (EUR—9708-Vol.2, pp 947-961) **Thermal electrons transport in the presence of strong temperature gradients.** Virmont, J.; Luciani, J.F.; Mora, P. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

When the temperature gradient is too strong, the classical theory of heat transport breaks down, because it is only a first order expansion. This is the case in several experimental situations of present interest, particularly in laser-irradiated targets, where there are strong electron temperature gradients. It is well known that, in the specific case of electrons, the classical theory is limited to very small values of the ratio between the electron mean free path and the temperature gradient length. We show that a "non local" description, based on the P_1 approximation, holds over the next decade. The existence of this intermediate regime, before the very complicated "kinetic" situation, is characteristic of electrons and is due to the preponderance of small angle scattering. In many cases, the approximation of a quasi-steady-state still can be done, which further simplifies the solution. In this regime, the convolution of the Spitzer heat flow by a "delocalisation function" is shown to fit well the simulation results, and can be justified as the right approximation. This formulation can be easily incorporated into fluid codes.

24236 (EUR—9708-Vol.2, pp 963-993) **Nonlinear driven reconnection.** Sato, T. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Characteristics of driven reconnection are explained with emphasis on the distinction from spontaneous reconnection. Numerical simulations indicate that driven reconnection is almost independent of resistivity but is largely controlled by driving plasma flow, this making a clear contrast with spontaneous reconnection. Four different examples of driven reconnection are studied by 3D MHD simulations. The first one is the case where two identical plasmas with anti-parallel fields are driven to collide in an open system. A typical example is the stretched magnetotail neutral sheet. Simulations indicate that slow mode shocks are formed whereby plasma is explosively accelerated. The second example is the case where a high-beta plasma collides against a low-beta plasma with an arbitrary field angle. The solar wind-magnetosphere interaction is a typical example - Results indicate that no prominent plasma acceleration is observed in this case but the high-beta plasma continuously erodes the low-beta plasma. The fine structure in the vicinity of the reconnection line is disclosed. The third example is the merging process of two spheromaks. It is shown that merging is an energy relaxation process. The final example is the self-reversal process in the reversed field pinch. It is shown that the self reversal is a relaxation process caused by nonlinear driven reconnection.

24237 (EUR-CEA-FC—1295, pp 49-52) **Suppression of sawtooth oscillations by Lower Hybrid Current Drive in the Petula-B tokamak.** Van Houtte, D.; Agarici, C.; Bottollier-Curtet, H. (Association EURATOM-CEA CEN Grenoble, 38, France. DRFC/SJG). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Powerful additional heating experiments on large tokamaks have shown limitations of performances due to the presence of internal disruptions. Thus, since the early work of the Petula Group on the low-m tearing mode stabilization (van Houtte et al, 1984), the Lower Hybrid Current Drive (LHCD) experiments are mainly aiming at the suppression of sawtooth instabilities which exist in inductively driven discharges.

24238 (EUR-CEA-FC—1295, pp 25-28) **Lower hybrid current drive efficiency of the Petula-B tokamak at f = 1.3 GHz and at f = 3.7 GHz.** Gormezano, C.; Hoang, G.T.; Agarici, G. (Association EURATOM-CEA, CEN Grenoble, 38, France. Dept. de Recherches sur la Fusion Controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Current drive experiments are made in the Petula-B tokamak by means of a 1.3 GHz generator and a 3.7 GHz generator. Density limits are given; comparison between efficiencies at these two frequencies is given. Power dependence of efficiency for 3.7 GHz is studied.

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

The following studies are briefly described: (1) three wave mode coupling near lower hybrid resonance, (2) exact order reduction in mode conversion problems, (3) two-dimensional conversion-parabolic approximation and (4) transport simulations of icrf-heated tokamaks. (MOW)

24244 (IC—86/169) Theoretical study of electrical breakdown in nitrogen induced by laser radiation at 1.06 μm. Gamal, Y.E.E.D.; Abdel-Moneim, N.M. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701527.

The electron cascade model originally proposed by Evans and Gamal to study atomic gas breakdown is extended to molecular gas breakdown calculations, including molecular electronic excitations and vibrational excitation effects. The validity of this model is studied for nitrogen at pressures ranging from 7.6 x 10/sup 2/ to 3.3 x 10/sup 4/ Torr irradiated by laser radiation of wavelength 1.06 μm and 10 ns pulse duration. The calculated threshold intensities are in good agreement with the experiment. Calculations of the electron energy distribution function have also been performed to reflect the important electron-molecule energy exchange processes in molecular gases. 10 refs, 5 figs, 2 tabs.

24245 (IC—86/173) Electron-ion two-stream instability in anisotropic isothermal plasma. Khalil, Sh.M.; Mohamed, B.F. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701528.

The linear excitation of electron-ion two-stream instability excited in inhomogeneous, magnetized isothermal plasma (T/sub e/ =T/sub i/) is investigated analytically. Expressions for the frequency, growth rate and conditions of instability are obtained when the current velocity slightly exceeds the instability threshold velocity. Inhomogeneity in density and existence of external static magnetic field may stabilize the instability. 14 refs.

24246 (IC—86/186) Buneman instability in hot electron plasma (T/sub e/>>T/sub i/). Khalil, S.M.; Sayed, Y.A.; Sayed, R.A. (International Centre for Theoretical Physics, Trieste (Italy)). Jul 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701532.

We shall investigate the linear excitation of electrostatic current Buneman instability in both unmagnetized and magnetized homogeneous plasma. The frequency, growth rate and conditions of excitation of such instability are obtained analytically. We consider that the current velocity u (due to relative streaming of ions and electrons) slightly exceeds the instability threshold velocity u/sub cr/ and that the electron temperature is much higher than the ion temperature (T/sub e/>>T/sub i/). 11 refs.

24247 (INIS-SU—384, pp 38-42) **Short-wave ion-acoustic turbulence and anomalous transport in a plasma.** Silin, V.P. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780105.

Kratkie Soobshcheniya po Fizike.; No. 6.

In Experimental and theoretical physics. Collection.

For small turbulent Knudsen numbers two approximations which allow assumption of analytical description of ion-acoustic turbulence, describing short-wave pulsations and refinement of anomalous transport coefficients, are proposed.

Equations described a nonlinear stage of a long-wave aperiodic parametric plasma instability in the SHF-field are obtained. Exact solutions of this equations reveal a possibility of generation of fast ion groups. Energy spectra and maximum energies of accelerated particles are defined. 12 refs.

24250 (INIS-SU—401, pp 27-32) **To the nonlinear theory of travelling electromagnetic waves in a moving plasma.** Silin, P.V. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780111.

Kratkie Soobshcheniya po Fizike.; No. 1.

In Experimental and theoretical physics. Collection.

Analytic theory of transition from supersonic plasma flow to subsonic one for a case of travelling wave where the electromagnetic field energy flow along the OX axis differs from zera is presented. It is supposed that radiation may be absorped within the plasma, and in the irradiating zone absorption is absent.

24251 (IPPJ—757) Active diagnostics of magnetically confined alpha particles by pellet injection. Sasao, M.; Sato, K.N.; Nakamura, Y.; Wakatani, M. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jan 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701580.

Confined alpha-particle diagnostics by a pellet injection is proposed. The alpha-particle density can be obtained from the number of decaying photons emitted from He/sup +/* (n ≦ 2) ions which are produced through the one-electron transfer reaction of an alpha-particle from the probing ion ablated from the pellet before it is fully ionized. The counting rate estimated with theoretical cross sections and the calculated pellet ablation rate is sufficient for the observation under the bremmstrahlung background. The alpha-particle velocity distribution will be also obtained from the Doppler broadening of the spectral lines.

24252 (LRP—252/84) TCA papers presented at 4th international symposium on heating in toroidal plasmas. (Centre de Recherches en Physique des Plasmas, Lausanne (Switzerland)). Oct 1984. 42p. (CONF-840311—Exc.). NTIS (US Sales Only), PC A03/MF A01. File Number DE87900202.

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

24253 (LRP—252/84, pp H.1-H.15) **Alfven wave heating on TCA.** de Chambrier, A.; Collins, G.A.; Duperrex, P.A.; Heym, A.; Hofmann, F.; Hollenstein, C.; Joye, B.; Keller, R.; Lietti, A.; Lister, J.B. (Ecole Polytechnique Federale de Lausanne, Switzerland; Univ. of Fribourg, Switzerland; Univ. of Zurich, Switzerland). Oct 1984. NTIS (US Sales Only), PC A03/MF A01. File Number DE87900202. (CONF-840311—Exc.).

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Recent results of Alfven wave heating in the TCA Tokamak are briefly reviewed. Measurements of the electron temperature and electron density in the TCA scrape-off layer during high power rf heating are presented in detail. It is found that antenna-plasma interaction may lead to a non-Maxwellian edge plasma. Its impact on the interpretation of the edge measurements and the antenna and screen design are discussed.

24254 (SAIC—86/1904-Rev.) Beating a dead horse with a red herring. Catto, P.J. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Feb 1987. Contract AC03-76ET53057. 12p. (PRI—105-Rev.). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006576.

An alternate banana regime evaluation of the ion heat flux in tokamaks demonstrates that the neoclassical ion thermal conductivity in the large aspect ratio limit is slightly more than twice the accepted value. Furthermore, the arbitrary aspect ratio expression is evaluated and found to be different than previously conjectured.

24255 **(SAIC—87/1559) Evaluation of the slowing down tail enhanced, neoclassical alpha particle energy flux.** Catto, P.J. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Feb 1987. Contract AC03-76ET53057. 17p. (PRI—109). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006577.

The non-Maxwellian slowing down tail formed by the energetic alpha particles produced in a fusing tokamak is shown to substantially enhance the neoclassical radial energy loss of alphas. The retention of the pitch angle scattering of the energetic tail alphas by the background ions leads to a neoclassical energy flux that can easily become comparable to that of the alpha ash. Fortunately, only a small fraction of the fusion alpha power is lost because of this enhanced energy diffusion.

24256 **(TRITA-PFU—85-10) Hall effect upon small wavelength kink instabilities near an elliptic magnetic stagnation line.** Spies, G.O.; Faghihi, M. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research). [1986]. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87750909.

To explore the question whether the Hall effect removes the unphysical feature of ideal magnetohydrodynamics of predicting unstable small wavelenght kinks near any elliptic magnetic stagnation line, a spectral analysis is performed of the motion of an incompressible plasma about cylindrical Z-pinch equilibria with circular sections. The eigenvalue loci in the complex frequency plane are derived for the equilibrium with constant current density. These show that every particular mode becomes stable as the Hall parameter exceeds a critical value. However, this critical value is a decreasing function of the ideal growth rate and has a pole at the origin, implying that there always remains an infinite reservoir of slowly growing instabilities. Correspondingly, for equilibiria with arbitrary current distributions, the stability criterion is unaffected by the Hall term.

24257 **(TRITA-PFU—86-05) Effects of pressure anisotropy on the M=1 small wavelenght modes in Z-pinches.** Faghihi, M. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research). May 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750907.

A new model is used to investigate the effect of the pressure anisotropy on the internal kink (M=1) mode instability in a Z-pinch. A normal mode analysis of perturbed motion of an incompressible, collision- less and cylindrical plasma is performed. A comparison of the derived stability criterion with that of ideal MHD is made. The conclusion is that the stability criterion (rSigmaB/sp2/) '<0 can not be fullfilled without violation of the fire house condition Sigma>0, where Sigma=1-(P/sb/(parall)-P/sb/(perpend)/ B/sp/2.

24258 **(TRITA-PFU—86-06) Plasma stabilization and heating by induced currents along a poloidal magnetic field.** Brunsell, P.; Tennfors, E. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research). 25 Jun 1986. 76p. NTIS (US Sales Only), PC A05/MF A01. File Number DE87750908.

The stabilizing and heating effects of induces low frequency poloidal currents in the internal ring device F IV A are studied. Density fluctuations are stabilized already at a low power poloidal currents. At higher levels the temperature is increased. The start-up processes seem more efficient than without poloidal currents. Preliminary experiments at lower filling pressures indicate that a more quiescent plasma with higher temperature is produced.

24259 **(UPTEC—8613R) MHD stability properties of Extrap.** Ring, R. (Uppsala Univ. (Sweden). Inst. of Technology). 27 Mar 1986. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750902.

Stability properties of an Extrap with N conductors are investigated. The plasma is described by the ideal MHD model, the surface current model is used and the noncircularity is assumed to be weak. The investigation is carried out to second order in a small parameter /EPSILON/ that is a measure of the noncircularity of the cross section. As expected it turns out that the degeneracy present in the circular case is removed to first order in /EPSILON/ for m=N/2 and to second order for m=N, m beeing the azimuthal mode number. For other m values the degeneracy prevails but the eigenfrequences are shifted. It is also found that the sausage modes are stabilized for wave- lengths longer than the circumference of the pinch, that some other modes are stabilized for short waves and that the non- circularity causes resonant coupling between certain modes.

24260 **(UPTEC—85117R) Self-similar drift waves in two dimensions.** Nycander, J.; Taranov, V.B. (Uppsala Univ. (Sweden). Inst. of Technology). Nov 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87750698.

The possibility of self-similar non-linear driftwaves is shown, and an exact expression describing them in the linear limit is obtained. It is demonstrated numerically that they describe the tail that appear during solition formation.

24261 **Plasma-materials interactions test facility.** Uckan, T. (Fusion Energy Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Review of Scientific Instruments;* **58**: No. 1, 17-19(Jan 1987). Contract AC05-84OR21400.

The Plasma-Materials Interactions Test Facility (PMITF) recently designed and constructed at Oak Ridge National Laboratory (ORNL) is an electron cyclotron resonance microwave plasma system with densities around $10^{11}cm^{-3}$ and electron temperatures of 10—20 eV. The device consists of a mirror cell with high-field-side microwave injection and a heating power of up to 0.8 kW (cw) at 2.45 GHz. The facility will be used for studies of plasma-materials interactions and of particle physics in pump limiters and for development and testing of plasma edge diagnostics.

24262 **Magnetohydrodynamic stability of plasmas with aligned mass flow.** Tataronis, J.A.; Mond, M. (Los Alamos National Laboratory, P.O. Box 1663, Los Alamos, New Mexico 87545). *Physics of Fluids;* **30**: No. 1, 84-89(Jan 1987).

The linear magnetohydrodynamic stability of plasmas with sub-Alfvenic flows aligned parallel to the equilibrium magnetic field is treated. Subject to the constraints that the fluid is incompressible, inviscid, and perfectly conducting, it is demonstrated that stabilizing effects appear as the flow speed approaches the Alfven speed. The screw pinch plasma is treated explicitly, but it is conjectured that the conclusions are applicable to other equilibrium configurations.

24263 **F-θ pumping with partial relaxation.** Strauss, H.R.; Harned, D.S. (Courant Institute of Mathematical Sciences, New York University, New York, New York 10012). *Physics of Fluids;* **30**: No. 1, 164-167(Jan 1987).

F-θ pumping is studied in a 1-D model including the hyperresistivity caused by tearing mode turbulence. When the hyperresistivity is sufficiently large compared to the resistivity, a positive, although time-varying, toroidal current can be maintained without a net toroidal voltage. For less hyperresistivity, the toroidal current periodically changes sign.

24264 **Propagation of a nonrelativistic electron beam in a plasma in a magnetic field.** Okuda, H.; Horton, R.; Ono, M.; Ashour-Abdalla, M. (Plasma Physics Laboratory, Princeton University, P. O. Box 451, Princeton, New Jersey 08544). *Physics of Fluids;* **30**: No. 1, 200-208(Jan 1987).

Propagation of a nonrelativistic electron beam in a plasma in a strong magnetic field has been studied using electrostatic one-dimensional particle simulation models. Electron beams of finite pulse length and of continuous injection are followed in time to study the effects of beam—plasma interaction on the beam propagation. For the case of pulsed beam propagation, it is found that the beam distribution rapidly spreads in velocity space generating a plateaulike distribution with a high energy tail extending beyond the initial beam velocity. This rapid diffusion takes place within a several amplification length of the beam—plasma instability given by (ω/sub p/ω^2/sub b/) $^{-1}$/sup //$^3V_0$, where ω/sub p/, ω/sub b/, and V_0 are the target plasma, beam—plasma frequencies, and the beam drift speed. This plateaulike distribution, however, becomes unstable as

the high energy tail electrons free-stream, generating a secondary beam. A similar process is observed to take place for the case of continuous beam injection when the beam density is small compared with the total density n/sub b//n/sub t/<1. In particular, the electron velocity distribution is found monotonically decreasing in energy, having a high energy tail whose energy reaches twice the initial beam energy. Such an electron distribution is also seen in laboratory experiments and in computer simulations performed for a uniform, periodic system.

24265 **Reconstruction of plasma radiation features from projections measured with two bolometer arrays.** Schivell, J. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Review of Scientific Instruments;* **58**: No. 1, 12-16(Jan 1987).

A specialized method has been developed to maximize the two-dimensional detail obtained from two perpendicular bolometer arrays. The technique relies on the assumption that poloidal variation exists only near the plasma surface. The cross section is divided into appropriate zones and the emittance is reconstructed by a numerical method. The position, intensity, and width of large features are clearly displayed. A marfe is tracked as it drifts around the plasma and evolves into a radiating shell detached from the limiter. A central peak, plus inner-wall radiating layer, plus a marfe appear in a high-density case reached by pellet injection.

24266 **Simple system for mapping magnetic field errors in tori.** Bellan, P.M. (California Institute of Technology, Pasadena, California 91125). *Review of Scientific Instruments;* **58**: No. 1, 148-149(Jan 1987).

A simple inexpensive electron beam/detector system is described. This system is capable of making vector maps of magnetic field errors over the minor cross section of toroidal plasma devices.

24267 **Destabilization of Alfven-resonant modes by resistivity and diamagnetic drifts.** Aydemir, A.Y.; Hazeltine, R.D.; Meiss, J.D.; Kotschenreuther, M. (Institute for Fusion Studies, University of Texas at Austin, Austin, Texas 78712). *Physics of Fluids;* **30**: No. 1, 4-6(Jan 1987).

The existence of unstable resistive drift-Alfven modes is shown in a cylindrical geometry. The modes, driven by nonuniformities in the diamagnetic drift frequency, are unstable even when the associated purely resistive mode is stable. The growth rate has a weak, eta^{1}/sup //^{4}, dependence on resistivity. Because of their large growth rates, they may play an important role in tokamak confinement.

24268 **Analytical theory of nonlinear drift-tearing mode stability.** Scott, B.D.; Hassam, A.B. (Laboratory for Plasma and Fusion Energy Studies, University of Maryland, College Park, Maryland 20742). *Physics of Fluids;* **30**: No. 1, 90-101(Jan 1987).

An analytical theory of the nonlinear stability of drift-tearing modes in the semicollisional regime is presented. It is shown that the overall stability depends critically on the initial island width and the plasma beta. Linear and quasilinear treatments demonstrate that islands smaller than the linear tearing layer are stabilized completely by the influence of the electron temperature gradient. A nonlinear theory is developed for larger islands. Standard algebraic growth is obtained unless diamagnetic effects are strong, in which case the time-asymptotic stability is dependent on the density and temperature profiles.

24269 **Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas.** Hahm, T.S.; Diamond, P.H. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712-1060). *Physics of Fluids;* **30**: No. 1, 133-143(Jan 1987).

The thermal and particle diffusivities driven by resistive fluid turbulence in diverted tokamak edge plasmas are calculated. Diverted tokamak geometry is characterized by increased global shear near the separatrix and the tendency of field lines to linger near the x point. For resistive fluid turbulence, the dominant effect is increased global shear, which causes a reduction in the effective step size of the turbulent diffusion process and corresponding improvements in heat and particle confinement close to the separatrix. Stability of resistive kink modes resonant near separatrix is also ensured by the increased global shear. The relevance of these considerations to the L→H transition and to the edge transport barrier in H-mode plasmas is discussed.

24270 **Computational study of ion cyclotron frequency stabilization of the m = 1 interchange mode in mirror geometry.** Myra, J.R.; D'Ippolito, D.A.; Francis, G.L. (Science Applications International Corporation, Plasma Research Institute, 1515 Walnut Street, Boulder, Colorado 80302). *Physics of Fluids;* **30**: No. 1, 148-159(Jan 1987).

A cylindrical plasma model is used to study the stabilizing effect of electromagnetic ion cyclotron frequency range (ICRF) waves on the m = 1 magnetohydrodynamic interchange mode. The fast wave eigenmodes of the column and the near-field antenna pattern are calculated numerically for a diffuse plasma profile when ω>Ω/sub i/. The resulting ponderomotive force and sideband contributions to global interchange stability are then determined using a rigid shift trial function. For far-field stabilization it is verified that the direct ponderomotive and sideband contributions cancel exactly as the conducting wall supporting the fast wave eigenmode moves out to infinity. The near-field stabilization effect is related numerically to the driven k/sub parallel/ spectrum of the waves and their radial profiles. The numerical model is employed to calculate threshold ICRF wave amplitudes for the stabilization experiments in the Phaedrus tandem mirror [Phys. Rev. Lett. 51, 1955 (1983)].

24271 **Stimulated Raman scattering of nonlinear space-charge and transverse magnetic waves with a longitudinal wiggler.** Fenstermacher, D.L.; Seyler, C.E. (School of Electrical Engineering and Laboratory of Plasma Studies, Cornell University, Ithaca, New York 14853). *Physics of Fluids;* **30**: No. 1, 190-199(Jan 1987).

A formulation is given for the parametric coupling of nonlinear space-charge waves with transverse magnetic (TM) waveguide modes through a longitudinal wiggler field. The model is based upon the simplifying assumption of thin electron beam geometry, which requires only one-dimensional dynamics of the space-charge waves, and is an exact formulation in the limit of infinitesimally thin beams. A reduced model, obtained through the application of standard time-averaging techniques, leads to an analytic expression for the parametric growth rate as a function of beam parameters, pump strength, and wave mismatch. A numerical code is developed and used to solve the unapproximated model equations, and comparisons are made with the analytic theory. Agreement is good in the domain of applicability of the theory. It is also found numerically that nonlinear steepening and associated slowing of the space-charge waves: aspects usually neglected in ponderomotive theories: have important consequences on the evolution of the instability in the strongly nonlinear regime.

24272 **Electrostatic Kelvin—Helmholtz instability produced by a localized electric field perpendicular to an external magnetic field.** Pritchett, P.L. (Department of Physics, University of California, Los Angeles, California 90024). *Physics of Fluids;* **30**: No. 1, 272-275(Jan 1987).

The evolution of a plasma with a localized electric field perpendicular to an external magnetic field is shown to be dominated by the Kelvin—Helmholtz instability. For small ion gyroradius, the instability is similar to the fluid mode. When the ion gyroradius is an appreciable fraction of the spatial extent of the electric field, the plasma is not in equilibrium, and the initial drift profile relaxes. Subsequent evolution still leads to vortex flows.

24273 **Kinetic full wave theory of strong spatial damping of electron cyclotron waves in nearly parallel stratified plasmas.** Fruchtman, A.; Riedel, K.; Weitzner, H.; Batchelor, D.B. (Courant Institute of Mathematical Sciences, New York University, New York, New York 10012). *Physics of Fluids;* **30**: No. 1, 115-128(Jan 1987).

Propagation of extraordinary mode waves in nearly parallel stratified plasmas (magnetic beach geometry) is investigated. Since these waves are very heavily damped WKB theory is unreliable and kinetic effects make the problem inherently nonlocal. The reso-

nance region is treated by a boundary layer expansion which reduces the problem to an integrodifferential system in one dimension. It is proved analytically that for moderate to high density, waves incident from the high field side are totally absorbed with no reflected wave. At very low density some transmission is possible, where the transmission coefficients are being given correctly by cold plasma theory. Numerical solution of the integrodifferential system shows that the power deposition profile can differ significantly from that predicted from a local WKB theory.

24274 **Laser filamentation in a thermally unstable plasma.** Liang, E.P.; Langdon, A.B. (Physics Department, Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physics of Fluids;* **30**: No. 1, 175-178(Jan 1987). Contract W-7405-ENG-48.

The propagation of laser light in a thermally unstable plasma attributable to potential imbalances in the local heating and cooling rates caused by density or temperature perturbations is considered. The linear growth rates of laser filamentation and thermal instability are governed by a single fifth-order dispersion relation. The behavior of different modes in various limits is discussed in detail and examples of potential applications to laser—target interactions are given.

24275 **Model for thermal transport in tokamaks.** Guzdar, P.N.; Liu, C.S.; Dong, J.Q.; Lee, Y.C. (University of Maryland, College Park, Maryland 20742). *Physical Review Letters;* **57**: No. 22, 2818-2821(1 Dec 1986).

The cause for anomalous electron-energy confinement in tokamaks is an active area of research. In this Letter we present a model for the anomalous electron-energy transport and compare it with experimental results.

24276 **Nonlinear evolution of current-driven instabilities in a reversed-field pinch.** Carreras, B.A.; Holmes, J.A.; Diamond, P.H. (Oak Ridge National Lab., TN). *Transactions of the American Nuclear Society;* **53**: 242-243(1986). (CONF-861102—).

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

Plasmas can be confined in a toroidal configuration using magnetic fields generated by external coils and internal plasma currents. In a toroidal configuration, the magnetic field line equations constitute a Hamiltonian system which one and one-half degrees-of-freedom. This fact establishes a simple correspondence between a toroidal magnetic field and a nonlinear Hamiltonian system. This correspondence equates magnetic field lines in real space to orbits of the Hamiltonian system in phase space, and the magnetic field-line arc length to time. For the plasma to be well confined, the magnetic field lines should form nested flux surfaces, corresponding to constant energy surfaces for the Hamiltonian system. For a magnetic system invariant under a uniparametric group of transformations, such as rotations around the axis of the torus, nested flux surfaces exist. That is, the Hamiltonian is integrable. However, in a more general case without symmetry, the existence of flux surfaces is not assured. In practice, the symmetry of a magnetic configuration may be broken by the intrinsic character of the configuration (no symmetry in the coil system) or by the traces generated for n(t) were Fast-Fourier transformed to obtain power spectral densities (PSDs).

24277 **Cavity mode analysis of plasma frequency waves in inhomogeneous cylindrical plasmas.** Hutchinson, I.H.; Gandy, R.F. (Massachusetts Institute of Technology, Cambridge). *Physics of Fluids;* **28**: No. 4, 1090-1096(Apr 1985). Contract AC02-78ET51013.

A linear, electromagnetic analysis is presented of the cavity mode structure and dispersion relations for waves with frequency near the electron-plasma frequency in cylindrical plasmas with monotonically decreasing electron density and finite magnetic field. Analytic solutions are obtained which are exact in the limits when either the ratio of electron cyclotron to plasma frequency or the ratio of plasma size to parallel wavelength tends to infinity. Comparison with numerical solutions confirms that the analytic results are highly accurate even for fairly modest values of these ratios. Thermal effects are incorporated, including Landau (damping or) gain, which show the lowest-order transverse modes to have greatest gain. These modes are highly localized near the cylinder axis so that the plasma itself acts as a cavity, regardless of edge boundary conditions. The theory thus enables an interpretation to be made of maser action in quasicylindrical plasmas such as tokamaks. 11 references, 4 figures.

24278 **Plasma physics via computer simulation.** Birdsall, C.K.; Langdon, A.B. New York, NY; Mc Graw-Hill Book Co. (1985). 512p. Mc Graw-Hill Book Co., 1221 Avenue of the Americas, New York, NY 10020.

This book describes the computerized simulation of plasma kinetics. Topics considered include why attempting to do plasma physics via computer simulation using particles makes good physical sense; overall view of a one-dimensional electrostatic program; a one-dimensional electrostatic program; introduction to the numerical methods used; a 1d electromagnetic program; projects for EM1; effects of the spatial grid; effects of the finite time step; energy-conserving simulation models; multipole models; kinetic theory for fluctuations and noise; collisions; statistical mechanics of a sheet plasma; electrostatic programs in two and three dimensions; electromagnetic programs in 2D and 3D; design of computer experiments; and the choice of parameters.

24279 **(ANL/FPP/TM—212) Self-pumping inpurity control systems for INTOR.** Brooks, J.N.; Mattas, R.F.; Smith, D.L.; Hassanein, A.M. (Argonne National Lab., IL (USA)). Jan 1987. Contract W-31109-ENG-38. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007530.

Two self-pumping systems have been examined for use as the INTOR impurity control system. The systems work by trapping helium in freshly deposited metal surface layers on or near the divertor plate. A slot divertor concept using vanadium or other trapping material appears to be both feasible and mechanically simple, and offers significant advantages in cost, reduced complexity, and helium pumping efficiency for the INTOR design.

24280 **(CONF-870405—4) One- and two-dimensional radiation analysis of the Compact Ignition Tokamak.** Selcow, E.C. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87004626.

From Radiation protection and shielding conference; Knoxville, TN, USA (22 Apr 1987).

The Compact Ignition Tokamak (CIT) is being proposed as the next major fusion experiment to follow the operations of the Tokamak Fusion Test Reactor (TFTR). CIT is a compact deuterium-tritium-burning tokamak device that is designed to achieve ignition. The high neutron wall loadings, 7 to 9 MW/m^2, associated with the operation of this device require that neutronics-related issues be considered in the overall system design. Radiation shielding is required for the protection of both device components and personnel. A close-in igloo shield, 1.8 m nominal thickness, has been designed around the periphery of the tokamak structure to permit personnel access into the test cell after shutdown and to limit the total activation of the test cell components. This paper discusses the major neutronics issues related to the design of the Compact Ignition Experiment, describes the methodologies used to quantify these concerns, and presents the results of radiation transport and activation scoping studies.

24281 **(DOE/ER/13064—4) Analysis of impact fusion target dynamics: Final report, April 15, 1983 through August 15, 1986.** Ribe, F.L.; Christiansen, W.H.; MacCormack, R.W. (Washington Univ., Seattle (USA). Aerospace and Energetics Research Program). 1 Mar 1987. Contract AT06-83ER13064. 61p. (UWAERP—11). NTIS, PC A04. File Number DE87006728.

One- and two-dimensional calculations of the hydrodynamics of impact fusion were investigated. Calculations for D-T pellets in

the reactor regime are given. Appendices cover the following areas: (1) numerical studies of impact-fusion target dynamics, (2) computation equation-of-state and opacity packages, (3) modeling of the equation of state for hydrogen and solid materials, and (4) numerical solution of the two-dimensional Euler equations. (MOW)

From 4. ICENES conference; Madrid, Spain (7 Jul 1986).

Impact fusion involves the collision of gas-filled metallic shells which heat the gas to fusion conditions. We report on the numerical solution of the one-dimensional (1-D) and two-dimensional (2-D) Euler equations for the combination of metallic shells and internal deuterium gas with a typical initial radial velocity of 25 km/s, corresponding to possible next generation rail-gun velocities. In the 2-D case impacting shells whose initial shapes are spherical caps making acute internal angles of contact produce a quasispherical compression of the internal gas, initially assumed to be at rest. The computations proceed through turnaround, corresponding to maximum plasma compression, neutron yield and quasispherical cavity shaping. We compare plasma parameters and energy efficiency with the 1-D, spherical case.

24283 **(DOE/ER/53198—104) Reversed field pinch boundary study: Annual progress report for the period March 14, 1986-March 13, 1987.** Dexter, R.N.; Prager, S.C.; Sprott, J.C. (Wisconsin Univ., Madison (USA)). 1987. Contract FG02-85ER53198. 47p. NTIS MF A01; 2; GPO Dep. File Number DE87006815.

This report summarizes our present status and progress during the second year of support of our program to investigate the RFP boundary. It is a year in which we formed and studied a sustained RFP, demonstrated that the RFP state survived the insertion of a toroidal rail limiter at least 20% of the minor radius of the plasma, and investigated curvature-related fluctuations as a function of safety factor from tokamak into the RFP state. We demonstrated self-reversal at startup voltages of about 200 volts, no liner being present to protect the poloidal gap. These key steps towards MST, the Madison Symmetric Torus, now approaching completion as a vacuum tank in Italy, were carried to a secure point, then terminated in favor of the scheduled installation of four rings to form a magnetic divertor RFP configuration. This upgrade was smoothly accomplished, but unlike the case without rings, we have been unable to form a sustained RFP so far, by self-reversal or with aided reversal. We have not shown that replacing the conducting shell with a conducting separatrix is a possible configuration for a sustained RFP, but neither have we found any evidence that it is impossible. We simply have not been able to apply the poloidal gap voltage levels required.

24284 (EUR—9708-Vol.2, pp 339-358) **Stellarator magnetic surfaces without islands.** Cary, J. (Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

Methods for finding stellarator magnetic fields with good flux surfaces, no islands and no stochasticity are considered. First, a method for finding optimal coil winding laws is presented. This method yields magnetic fields without islands or stochasticity. These fields have rotational transform near the theoretical limit m/l and an increased value of <+2>epsilon, a figure of merit related to maximum confinable plasma pressure. This leads to a discussion of how plasma modifies these fields. An asymptotic, low pressure analysis shows that, typically, plasma does not drive significant islands, if the vacuum magnetic field has good average curvature. However, if it has bad average curvature, island overlap is present at arbitrarily small but nonzero plasma pressure.

(Ecole Polytechnique Federale, Lausanne, Switzerland; Commission of the European Communities, Brussels, Belgium. Fusion programme). 1985. NTIS (US Sales Only), PC A99/MF A01. File Number DE87751132. (CONF-840616—Vol.2).

From Joint conference of the 6. international conference on plasma physics and on the 6. international congress on plasma waves and plasma instabilities; Lausanne, Switzerland (27 Jun 1984).

High average power gyrotrons (1 MW at 100-150 GHz) are required for ECRH of magnetic fusion plasmas. Even though gyrotrons have superior mode stability compared with other tubes, they must be so grossly overmoded to handle 1 MW CW that mode control does become an issue. Studies of gyrotron-oscillator cavity designs with enhanced mode stability properties are described, including complex cavities and Fabry-Perot cavities. In the complex cavity concept, two cavities each operating in a different mode are strongly coupled. Designs of TE_{03}/TE_{04} and TE_{03}/TE_{06} gyrotrons which promise to extend performance are discussed. A 115 GHz gyrotron using a Fabry-Perot cavity has been successfully demonstrated at power levels above 50 kW and prospects of extending performance are considered. Study of high peak power gyrotrons is stimulated by the perceived requirement for 300 MW rf sources at lambda approximately 3 cm to drive very high energy (1 TeV) linear electron accelerators. For this application, the phase of the microwave signal must be precisely controllable. These demanding requirements have led to renewed interest in gyroklystron amplifiers, and studies of relatively low power gyroklystrons will be reviewed. Finally, a design of a 300 MW gyroklystron is presented.

24286 (EUR-CEA-FC—1295, pp 37-40) **Modular multijunction grill for current drive studies at 3.7 GHz for Petula-B and TORE SUPRA.** Rey, G.; Berger-By, G.; Bibet, P. (Association EURATOM-C.E.A CEN Grenoble, 38, France. Dept de Recherches sur la Fusion Controlee). May 1986. NTIS (US Sales Only), PC A04/MF A01. File Number DE87751062. (CONF-860412—).

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

A 8 MW - quasi continuous - 3.7 GHz Lower Hybrid Heating system is being designed for mainly current-drive studies on the TORE SUPRA Tokamak. A large simplification of the L.H. antenna and of the RF transmission line is obtained by applying two main ideas: (i) modular design, (ii) internal RF power division - 3 dB hybrid junction and E-plane multijunction. The E-plane M.J. system brings not only simplification in the building of the antenna, but also, when used in travelling wave, lowers strongly the power reflection coefficient towards the generator. This is a very important point, because such a system allows to avoid the use of circulators - expensive elements for large machine.

Kratkie Soobshcheniya po Fizike.; No. 1.

In Experimental and theoretical physics. Collection.

Experimental investigation of the cryolayer dynamics in the taget in the presence of temperature gradient is carried out in order to optimize the process of cryogenic target compression in the laser fusion chamber. Experimental measurements of the temperature dependence of substance transfer time in one part of the sphere have shown the sharp increase of localization time for the layer of n-H/sub 2/ at T < 10 K. This effect has been observed for n-D/sub 2/ layer at T < 12 K. It is shown that the presence of temperature gradient on the target surface is the reason of the formation of different thickness of cryolayer. Conditions for conservation of equal thickness cryolayer are determined.

24290 (JAERI-M—86-061) **Analysis of multislot directional coupler.** Arai, Hiroyuki; Goto, Naohisa; Yamamoto, Takumi. (Japan Atomic Energy Research Inst., Tokyo). Mar 1986. 33p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87701587.

This paper presents an analysis of multislot directional coupler for monitoring the gyrotron output. We solved the boundary value problem of the directional coupler to investigate the detailed effect of finite thickness slot and mutual coupling between slots. Numerical data of coupler design is presented for non-resonant a pair slot, and mode sensitivity in overmoded waveguide is also evaluated.

24291 (JAERI-M—86-064) **Conceptual design of negative-ion based 500 keV 20 MW neutral beam injector.** Horiike, Hiroshi; Ohara, Yoshihiro; Okumura, Yoshikazu; Shibata, Takemasa; Tanaka, Sigeru. (Japan Atomic Energy Research Inst., Tokyo). Apr 1986. 153p. (In Japanese). NTIS (US Sales Only), PC A08/MF A01. File Number DE87701588.

The conceptual design of 500 keV, 20 MW neutral beam injector is reported in the present document. This design utilizes a negative ion source to realize a efficient high power neutral beam injector, by taking advantage of the high neutralization efficiency of negative ions at high energy. In the present report, the conceptual design of the source plasma generator and the accelerating system is presented first. Three candidate systems are then examined, each with a different neutralizing cell. The system having a very long neutralizer was judged to be the most suitable to the reactor considered. It was designed in detail. The long neutralizer (30 m) has many advantages: 1) The ion source can be located far from the reactor, permitting a narrow injection tube and tangential injection angle; 2) Neutron shielding is easy because the solid angle of the beam line is very small; 3) Complex components are removed from the vicinity of the reactor. The simplicity of the beam line leads us to believe that the chances for its actualization as a reactor injector is very high. More efficient neutralizers, such as a plasma neutralizer or a laser cavity, will give more flexibility to this design and provide further advantages for this injector. The realization of this injector will require development work for the negative ion source, the high voltage power supply, and the ion dump. When these components are developed, the rest of the system will be designed using previously developed positive-ion-beam technology. The present report is based upon notes from design meetings and broadly summarizes discussions, estimations and data those determined the parameters.

24292 (JINR—E-4-85-953) **Cross sections for scattering of deuterium misic atoms on deuterium nuclei.** Melezhik, V.S.; Wozniak, J. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87701402.

Submitted to the journal Phys. Lett., A.

Cross sections have been calculated for elastic scattering of deuterium mesic atoms in ortho and para states on deuterium nuclei in the 0-50 eV energy range; cross sections for spin-flip have also been calculated. The calculation have been performed in the adiabatic representation where the initial problem of slow collisions in a three-body system is reduced to the multichannel scattering problem. The temperature dependence of the ortho-para transition rate Λsub(hf)(T) for dμ-atoms is obtained for a deuterium target. The calculated rate Λsub(hf)(34K)=(37.2 x 10sup(6) s/sup -1/ (Vienna-SIN group, 1983). 11 refs.; 6 figs.; 1 tab.

24293 (Juel—2041) **Determination of the entrance rate and release rate constants and of the diffusion rate constants of hydrogen and deuterium for Inconel 600, by means of permeation measurements and the observation of recycling in the tokamak TEXTOR.** Rota, E. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik; Duesseldorf Univ. (Germany, F.R.)). Feb 1986. 136p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87751198.

The aim of the work was the determination of material constants for Inconel 600, which characterize the recycling processes between gaseous hydrogen and metallic walls. The study of such processes is particularly important for the present-day tokamaks and for future fusion devices, because the hydrogen coming from the plasma during a discharge reaches the inner wall, and is reemitted from it several times. The main part of the experiments was the observation of the stationary and time-dependent hydrogen (H/sub 2/ and D/sub 2/) permeation flux through a membrane of Inconel 600. A further part of the experiments was the observation of hydrogen release at the upstream side of the membrane, when this side of the membrane is exposed to atomic hydrogen. This allows us to determine the 'recycling constant' R/sub c/=D/2σk/sub r/. The method is very suitable for a tokamak device and was applied for the first time in the tokamak TEXTOR.

24294 (Juel—2056) **Thermal shock testing of ceramics with pulsed laser irradiation.** Benz, R.; Naoumidis, A.; Nickel, H. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorwerkstoffe). Apr 1986. 43p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751345.

Arguments are presented showing that the resistance to thermal stressing ("thermal shock") under pulsed thermal energy deposition by various kinds of beam irradiations is approximately proportional to PHI/sub a/√tp, where PHI/sub a/ is the absorbed power density and tp is the pulse length, under conditions of diffusivity controlled spreading of heat. In practical beam irradiation testing, incident power density, PHI, is reported. To evaluate the usefulness of PHI√tp as an approximation to PHI/sub a/√tp, damage threshold values are reviewed for different kinds of beams (electron, proton, and laser) for a range of tp values 5x10/sup -6/ to 2 s. Ruby laser beam irradiation tests were made on the following ceramics: AlN, BN, graphite, αSiC, β-SiC coated graphites, (α+β)Si/sub 3/N/sub 4/, CVD (chemical vapor deposition) TiC coated graphite, CVD TiC coated Mo, and CVD TiN coated IN 625. The identified failure mechanisms are: 1. plastic flow followed by tensile and bend fracturing, 2. chemical decomposition, 3. melting, and 4. loss by thermal spallation. In view of the theoretical approximations and the neglect of reflection losses there is reasonable accord between the damage threshold PHI√tp values from the laser, electron, and proton beam tests. (orig./IHOE).

24295 (KFK—4097) **Data acquisition and processing for testing of superconducting coils.** Donner, I.; Froehlich, D.; Heep, W.; Padligur, U.; Rietzschel, K.; Wuerz, G. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Hauptabteilung Datenverarbeitung und Instrumentierung). Jun 1986. 36p. (In German). NTIS (US Sales Only), PC A03/MF A01. File Number DE87751346.

This document will describe the use of a computer controlled data acquisition system in performing measurements at the coil test facility TOSKA (Toroidale Spulentesteinrichtung Karlsruhe). The design and logic of special CAMAC data acquisition modules and questions of measuring techniques are discussed. Also the functional characteristics of special software developments like the program system for realtime processing of measuring data and the program package for graphics display of stored data are described.

24296 **(KFK—4168) Polarization of solid deuterium-tritium fuel for nuclear fusion.** Heeringa, W. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Nov 1986. 34p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87751237.

The advantages of using polarized DT-fuel are discussed. An outline is given of the standard methods employed to produce polarized solid hydrogen targets for nuclear physics. The applicability of these methods for obtaining polarized DT is analysed. Large polarizations seem to be realisable in spite of the tritium decay heat, which hinders the attainment of low temperatures.

24297 (LRP—252/84, pp C.1-C.7) **Discontinuous heating behaviour observed in the TCA tokamak and its interpretation in terms of the Alfven wave spectrum.** Appert, K.; de Chambrier, A.; Collins, G.A.; Duperrex, P.A.; Heym, A.; Hofmann, F.; Hollenstein, C.; Joye, B.; Keller, R.; Lietti, A. (Ecole Polytechnique Federale de Lausanne, Switzerland; Univ. of Fribourg, Switzerland). Oct 1984. NTIS (US Sales Only), PC A03/MF A01. File Number DE87900202. (CONF-840311—Exc.).

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

Since Alfven wave heating relies on the absorption of a wave's energy at resonance surfaces within the plasma, there should be some correlation between the observed heating and the position of these surfaces. The early heating experiments on TCA, while showing significant electron and ion temperature increases, failed to show such a correlation. Improvements to the experiment, particularly due to active current control and attempts to find the best limiter material and design, allowed confirmation of both the electron and the ion heating and increased the maximum rf power that could be delivered. Detailed experiments and analyses have been performed to determine which antenna structures can excite the mode and to quantify the effects of heating both with and without the mode in the plasma. A modified version of the ERATO stability code was used to give a two dimensional model of the excitation process, with the restriction of ideal MHD that ω/ω/sub ci/ = 0. We have been able to confirm our earlier identification of the new mode, and to show that it is due to toroidal coupling of different poloidal modes in the plasma.

24298 (LRP—252/84, pp J.1-J.6) **Alfven wave heating results in TCA using coated bar antennae.** de Chambrier, A.; Collins, G.A.; Duperrex, P.A.; Heym, A.; Hofmann, F.; Hollenstein, C.; Joye, B.; Keller, R.; Lietti, A.; Lister, J.B. (Ecole Polytechnique Federale de Lausanne, Switzerland; Univ. of Fribourg, Switzerland). Oct 1984. NTIS (US Sales Only), PC A03/MF A01. File Number DE87900202. (CONF-840311—Exc.).

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

The Alfven Wave launching antennae in TCA have been changed. The wide stainless steel plates previously used have been replaced by a simple bar-antenna structure which has nonetheless maintained a pure n-spectrum. The antennae have also been coated with titanium nitride. We present results on the coupling properties of the new antennae and their effects on the plasma. Preliminary indications are that there is a considerable reduction in the metallic impurity concentration following this change.

24299 (LRP—252/84, pp P.1-P.7) **Non-linear antenna loading measurements in TCA.** de Chambrier, A.; Collins, G.A.; Duperrex, P.A.; Grossmann, M.; Heym, A.; Hofmann, F.; Hollenstein, C.; Joye, B.; Keller, R.; Lietti, A. (Ecole Polytechnique Federale de Lausanne, Switzerland; Univ. of Fribourg, Switzerland; JET-Joint Undertaking, Abingdon, England). Oct 1984. NTIS (US Sales Only), PC A03/MF A01. File Number DE87900202. (CONF-840311—Exc.).

From 4. international symposium on heating in toroidal plasmas; Rome, Italy (21 Mar 1984).

The TCA tokamak is mainly dedicated to the study of additional heating by the absorption of Alfven Waves (ω << ω/sub ci/). Rf waves are launched by the antennae to heat the plasma core. Unwanted edge dissipation can reduce the heating efficiency and may lead to spurious edge heating. A sufficiently large bias voltage of the antennae can decrease the rf impedance, as well as increase the strength of the wavefields. This observation indicates the presence of some parasitic loading, particularly evident at low power, and reduced above 50 kW. The loading stabilizes at bias voltages below -60 volts. The asymptotic loading is compared with numerically calculated values. The origin of these effects is discussed.

24300 **(SAND—87-0635C) Progress on the Particle Beam Fusion Accelerator II for light ion fusion.** VanDevender, J.P.; Wright, T.P. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 4p. (CONF-870302—8). NTIS MF A01; 2; GPO Dep. File Number DE87006893.

From Particle accelerator conference; Washington, DC, USA (16 Mar 1987).

Particle Beam Fusion Accelerator II (PBFA II) at Sandia National Laboratories is the largest in the series of particle beam drivers and the first with the potential of achieving the necessary energy and power density required for igniting thermonuclear fuel in the laboratory. PBFA II is a series of experiments in pulsed power, power flow, ion sources, lithium ion beam generation, beam transport, beam focussing, radiation physics and implosion hydrodynamics. If these challenging experiments are successfully completed, then thermonuclear fuel may be ignited in the laboratory for the first time. Because of the large number of research items in series, the risk is very high and the experiments will require many years of intensive effort. On December 15, 1985, PBFA II construction was completed and the accelerator was activated. Since that time, the pulsed power has been developed and major experiments in power flow and ion sources have been conducted. Preliminary experiments on beam generation have also been conducted. The accelerator is currently operating and providing one fully diagnosed experiment each week. The PBFA II program and the results to date with this technology will be presented.

24301 **(UCID—20773-Vol.2) MINIMARS conceptual design: Final report.** Lee, J.D. (ed.). (Lawrence Livermore National Lab., CA (USA); Oak Ridge National Lab., TN (USA); Wisconsin Univ., Madison (USA); General Dynamics Corp., San Diego, CA (USA). Space Systems Div.; Grumman Aerospace Corp., Bethpage, NY (USA); Canadian Fusion Fuels Technology Project, Toronto, Ontario). Sep 1986. Contract W-7405-ENG-48. 510p. NTIS, PC A22/MF A01; 1; GPO Dep. File Number DE87006585.

This volume contains the following sections: (1) fueling systems; (2) blanket; (3) alternative blanket concepts; (4) halo scraper/direct converter system study and final conceptual design; (5) heat-transport and power-conversion systems; (6) tritium systems; (7) minimars air detritiation system; (8) appropriate radiological safety design criteria; and (9) cost estimate. (MOW)

24302 **Fabrication of high-gain inertial fusion targets using gas jet cooling and intensity-graded laser illumination.** Kim, K.; Krahn, D.L. (Fusion Technology/Charged Particle Research Laboratory, University of Illinois, 1406 W. Green Steet, Urbana, Illinois 61801). *Journal of Applied Physics;* **61**: No. 8, 2729-2733(15 Apr 1987).

A new method, which is particularly suitable for fabricating a uniformly thick solid- or liquid-fuel layer inside an inertial confinement fusion target, is described. The method employs a cold helium-gas-jet shower to uniformly cool a target and an intensity-graded laser illumination to create a desired thermal gradient across the target. The net result is a thermally induced fuel migration inside the target, which precisely counterbalances the gravity-induced fuel sagging, bringing about a uniform layer of fuel condensate on the target interior. This new method is significant for the following reasons: First, it allows for fabrication of both solid- and liquid-fuel layers. Second, it is a noncontact method. Third, it requires either none or very little cryogenic shielding. Fourth, it is simple to implement. Fifth, it allows for easy diagnostic access to the target. Details of the apparatus and results showing the capabilities of the method are presented.

24303 **Production of spin polarized fusion fuels.** Honig, A. (to Syracuse Univ., Syracuse, NY). US Patent 4,642,206. 10 Feb 1987. Filed date 27 Jun 1983. vp.

The method is described of producing polarized deuterons in solid HD that includes the steps of providing a sample of HD containing a 10/sup -4/ to 10/sup -3/ concentration (mole fraction) of rho-D/sub 2/, irradiating the sample with radiation that produces defect centers in the sample for increasing the conversion rate of rho-D/sub 2/ to o-D/sub 2/, subjecting the sample simultaneously to a magnetic field greater than 10 Telsa and a temperature less than 10 m°K. such that the H/sub O//T ratio is in a range of between 1000 and 7500 T/°K. corresponding to a deuteron polarization range of 20% to 90%, and allowing rho-D/sub 2/ to convert to o-D/sub 2/ to increase the relaxation time of the polarized deuterons at ordinary liquid helium temperatures of 1°-4°K. and low magnetic fields of about 0.1 Telsa. The method is also described of producing polarized tritons in solid HT that includes the steps of epitaxially depositing alternate layers of HT having a thickness of about 1 μm on thicker layers of solid HD at temperatures 0.3 to 4°K. wherein the protons in the HD are polarized and the deuterons are either polarized or unpolarized, allowing the proton polarization in the HD layer to diffuse to polarize the protons in the HT layers through spin diffusion, placing the layers in a radio frequency field, and radiating the layers with radio frequencies to induce partially forbidden transitions between the polarized proton and the unpolarized triton coupled energy levels to polarize the tritons directly.

24304 **Evaluation of charcoal sorbents for helium cryopumping in fusion reactors.** Tobin, A.G.; Sedgley, D.W.; Batzer, T.H.; Call, W.R. (Grumman Corporation, Bethpage, New York 11714). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **5**: No. 1, 101-105(Jan 1987).

Improved methods for cryopumping helium were developed for application to fusion reactors where high helium generation rates are expected. In this study, small coconut charcoal granules were utilized as the sorbent, and braze alloys and low temperature curing cements were used as the bonding agents for attachment to a copper support structure. Problems of scale-up of the bonding agent to a 40 cm diam panel were also investigated. Our results indicate that acceptable helium pumping performance of braze bonded and cement bonded charcoals can be achieved over the range of operating conditions expected in fusion reactors.

24305 **CODAS: The JET control and data acquisition system.** Van der Beken, H.; Best, C.H.; Fullard, K.; Herzog, R.F.; Jones, E.M.; Stead, C.A. (JET Joint Undertaking, Abingdon, Oxfordshire OX14 3EA). *Fusion Technology;* **11**: No. 1, 120-140(Jan 1987).

The hardware and software structure of the control and data acquisition system (CODAS) of the Joint European Torus is described. CODAS is a large distributed real-time process control system. The operation is centralized in two adjacent control rooms through a fully programmable man-machine interface. The plant interface is based on CAMAC instrumentation and Eurocard signal conditioning. The system is based on a network of minicomputers with a link to a host mainframe.

24306 **Neutron dosimetry qualification experiments for the Tokamak Fusion Test Reactor Lithium Blanket Module program.** Tsang, F.Y.; Harker, Y.D.; Anderi, R.A.; Nigg, D.W.; Jassby, D.L. (EG&G Idaho, Inc., Idaho National Engineering Lab., Fusion Technology Program, P.O. Box 1625, Idaho Falls, ID 83415). *Fusion Technology;* **10**: No. 3, 396-404(Nov 1986).

The Tokamak Fusion Test Reactor (TFTR) Lithium Blanket module (LBM) program is a first-of-kind neutronics experiment involving a toroidal fusion neutron source. Qualification experiments have been conducted to develop primary measurement techniques and verify dosimetry materials that will be used to characterize the neutron environment inside and on the surfaces of the LBM. The deuterium-tritium simulation experiments utilizing a 14-MeV neutron generator and a fusion blanket mockup facility at the Idaho National Engineering Laboratory are described. Results and discussions are presented that identify the quality and limitations of the measured integral reaction data, including the minimum fluence requirement for the TFTR experiment and the use of such data in neutron spectrum adjustment and in predicting integral performance parameters, e.g., tritium production.

99 GENERAL AND MISCELLANEOUS

24307 **(CONF-870212—1) The labor market for mining engineers: Recent experience and outlook for the future.** Finn, M.G.; Johnson, D.L. (Oak Ridge Associated Universities, Inc., TN (USA)). 1987. Contract AC05-76OR00033. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006363.

From Annual meeting and exhibition of the Society of Mining Engineers; Denver, CO, USA (24 Feb 1987).

This survey indicates that, although the market for mining engineers has weakened in recent years, the worst of the projected declines in mining engineering employment may already have taken place. (DLC)

24308 **(DOE/MA—0287) Listing of awardee names: Active awards as of January 29, 1987.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Procurement and Assistance Management Directorate). 29 Jan 1987. 532p. NTIS, PC A23/MF A01; 1; GPO Dep. File Number DE87005445.

This is a computerized listing issued quarterly from the Procurement and Assistance Data System (PADS), including an alphabetical listing of all acquisition and financial assistance awards (excluding purchase orders) with the Department of Energy. Active is defined as the completion date of the award is later (in the future) than the date of the issuance of the listing.

24309 **(DOE/OR/00033—T289) US Department of Energy High School Student Supercomputing Honors Program: A follow-up assessment.** (Oak Ridge Associated Universities, Inc., TN (USA)). Jan 1987. Contract AC05-76OR00033. 43p. NTIS MF A01; 2; GPO Dep. File Number DE87007058.

The US DOE High School Student Supercomputing Honors Program was designed to recognize high school students with superior skills in mathematics and computer science and to provide them with formal training and experience with advanced computer equipment. This document reports on the participants who attended the first such program, which was held at the National Magnetic Fusion Energy Computer Center at the Lawrence Livermore National Laboratory (LLNL) during August 1985.

24310 **(DOE/OR/00033—T290) US Department of Energy University Research Instrumentation Program, FY1984: A follow-up report.** (Oak Ridge Associated Universities, Inc., TN (USA)). Jan 1987. Contract AC05-76OR00033. 23p. NTIS MF A01; 2; GPO Dep. File Number DE87007340.

The US Department of Energy (DOE) initiated its University Research Instrumentation (URI) Program in FY1984 as part of an interagency effort coordinated by the Office of Science and Technology Policy. Objective is to help upgrade the capability of universities to conduct advanced research and to support the training of graduate students in science and engineering. This document reports on the use of URI equipment approximately one year after its funding in FY1984.

24311 **(DOE/OR/00033—T291) Historically Black Colleges and Universities Fossil Energy Faculty Research Training Program: FY1986 annual report.** (Oak Ridge Associated Universities, Inc., TN (USA)). Jan 1987. Contract AC05-76OR00033. 33p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87007339.

Purpose of the Historically Black Colleges and Universities (HBCU) Fossil Energy Faculty Research Training Program is to increase the involvement of faculty members from HBCUs as collaborators in relevant fossil energy research and development supportive of the Pittsburgh Energy Technology Center (PETC).

24312 (DOE/OR/00033—T292) Office of Health and Environmental Research Historically Black Colleges and Universities Faculty and Student Research Participation and Training Program: FY1986. (Oak Ridge Associated Universities, Inc., TN (USA)). Jan 1987. Contract AC05-76OR00033. 25p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007338.

Purpose of the Office of Health and Environmental Research (OHER) Historically Black Colleges and Universities (HBCUs) Faculty and Student Research Participation and Training Program is to provide training and collaborative research participation opportunities in OHER-supported programs and activities at designated US Department of Energy (DOE) research and development facilities. The program advances the mission of OHER, strengthens the research and teaching capabilities of HBCUs in disciplines supportive of OHER program activities, and introduces faculty members and students to DOE facilities and the OHER mission.

24313 (GKSS—86/E/1) Scientific technical reports of the GKSS 1985. (GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.)). 1986. 47p. (In German). NTIS (US Sales Only), PC A03/MF A01. File Number DE87751342.

The survey gives the names of authors and the titles of all external GKSS reports published in 1985, of which - with the exception of reprints in journals - abstracts and/or bibliographic data are given.

24314 (RISO-M—2557) Health Physics Department annual progress report 1 January-31 December 1985. (Risoe National Lab., Roskilde (Denmark)). Oct 1986. 41p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87750888.

The report describes the work of the Health Physics Department at Risoe during 1985. The activities cover dosimetry, instrumentation, radioecology, risk by nuclear activities and nuclear emergency preparedness. Lists of staff and publications are included. The main emphasis in the report has been placed on scientific and contractual work. Of lesser importance, but still quite significant, are the service functions.

24315 (UCID—20622-87-1) Chemistry and Materials Science: Quarterly research report: Weapons supporting research, departmental institutional research and development, September-December 1986. (Lawrence Livermore National Lab., CA (USA)). Feb 1987. Contract W-7405-ENG-48. 201p. NTIS, PC A10/MF A01; 1; GPO Dep. File Number DE87007446.

Summaries are given of research conducted in advanced materials, materials characterization and analysis, physical metallurgy, chemical reactions and transport processes, and properties of hydrogen isotopes. (DLC)

24316 (UCRL—95891) Organizing for quality: A structural perspective. Dronkers, J.J. (Lawrence Livermore National Lab., CA (USA)). 7 Jan 1987. Contract W-7405-ENG-48. 23p. (CONF-870544—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE87004356.

From 41. annual quality conference; Minneapolis, MN, USA (4 May 1987).

This paper discusses an aspect of QA program implementation that often has been overlooked: existing organizational structures. The paper's premise is that existing organizational structures have a great deal to do with an organization's culture and therefore must be considered when implementing QA programs. The paper reviews major quality assurance programs descriptions as are found in several standards and in the writings of Crosby, Feigenbaum, and Juran. The review shows that quality assurance programs are concerned with both quality achievement and demonstrability of that achievement. Next, a review of organizational structures is considered. Two traditional ones: hierarchical and matrix structures, and an emerging one, parallel structure. Characteristic traits of each and their importance are discussed. The paper concludes with suggesting a method for implementing QA programs to existing structures. The method contemplated places the QA professional in the role of change agent. The method's basis is a critical review of what is needed in a QA program, and what already exists in the structure.

24317 (UCRL—96258) Toward the year 2000: The near future of the American civilian and military space programs. Wood, L.L.; Ishikawa, M.Y. (Lawrence Livermore National Lab., CA (USA)). Jan 1987. Contract W-7405-ENG-48. 10p. (CONF-870162—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006467.

From 3. national space symposium of the United States Space Foundation; Colorado Springs, CO, USA (20 Jan 1987).

The basic features of the American civilian and military space programs at the end of this century are identified and their histories traced back to the present time, for the "surprise-free" scenario. Several of the more likely surprises are noted, and their probable impacts sketched.

9901 Management

24318 (ANL/TM—432-Rev.1) ANL statement of site strategy for automated office support systems. Boxberger, L.M. (Argonne National Lab., IL (USA)). Feb 1987. Contract W-31109-ENG-38. 70p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87006874.

The "Statement of Site Strategy" consists primarily of eighteen chapters that together explain the overall Argonne strategy for defining, acquiring, using, and evaluating computing workstations and other automated office support systems. The five appendices clarify Argonne's responsibilities in managing microprocessors and word processors and in acquiring computing workstation components. Appendix E contains the justification form necessary for acquiring computing workstation equipment, software, or peripherals. 11 refs.

24319 (DOE/MA—0295) Work breakdown structure guide. (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Project and Facilities Management). 6 Feb 1987. 74p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87007606.

Utilization of the work breakdown structure (WBS) technique is an effective aid in managing Department of Energy (DOE) programs and projects. The technique provides a framework for project management by focusing on the products that are being developed or constructed to solve technical problems. It assists both DOE and contractors in fulfilling their management responsibilities. This document provides guidance for use of the WBS technique for product oriented work identification and definition. It is one in a series of policy and guidance documents supporting DOE's project manaagement system.

24320 (IAN-AIM—4) Quality assurance in nuclear installations. Torres M, N. (Instituto de Asuntos Nucleares, Bogota (Colombia). Area de Aplicaciones Industriales y Metalurgia). Aug 1985. 38p. (In Spanish). NTIS (US Sales Only), PC A03/MF A01. File Number DE87701517.

It has been proven that the bad quality of products, equipment, installations, and services is not due to the lack of tests, experiments and verifications. The main causes are associated with insufficient organization of the activities that have influence on the quality. The garantee of quality is conceptualized as an appropriate instrument composed of normalized criteria initially in advanced technologies. Such as nuclear science and aerospace technology. However, with the appropriate modifications it can be applied to conventional technologies.

24321 (INIS-mf—10520) Memoir 1985. Instituto Nacional de Investigaciones Nucleares. (Instituto Nacional de Investigaciones Nucleares, Mexico City). 1985. 24p. (In Spanish). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701565.

A brief review of the National Institute of Nuclear Research is given and its activities in 1985 summarized, among which were the Institute's fabrication of nuclear fuel rods, advisory and techni-

cal support of the national nucleoelectric program, encouragement of the utilization of nuclear techniques in farming, livestock breeding, industry and health, improving processes in radioisotope production, construction of a metrology building for ionizing radiation measurement, training of manpower for the nucleoelectric industry, for applying nuclear techniques, and the assemblying of a pelletron electron accelerator. (m.r.).

24322 **(INIS-mf—10586) Progress report October 1985-September 1986 of the Institute for Theoretical Physics, University of Graz, Austria.** Lang, C.B. (comp.). (Graz Univ. (Austria). Inst. fuer Theoretische Physik). Dec 1986. 19p. (In German). NTIS (US Sales Only), PC A02/MF A01. File Number DE87701574.

There is a listing of projects in the fields: 1) electromagnetic processes, 2) quantum mechanics and field theory, 3) elementary particle physics, 4) mathematical physics, 5) many-particle physics and nuclear physics, 6) semiconductor physics, 7) energy and fundamentals of nuclear energetics and a publication list. (G.Q.).

24323 **(UCRL—15868) FRM: An intelligent assistant for Financial Resource Management: [Final report, December 1984 through October 1986].** Buchanan, B.G.; Rindfleisch, T.C.; Cornelius, C.W. (Stanford Univ., CA (USA). Knowledge Systems Lab.; Lawrence Livermore National Lab., CA (USA)). 14 Nov 1986. Contract W-7405-ENG-48. 20p. NTIS, PC A02. File Number DE87007059.

FRM offers an easily understood and uniform user interface, a constraint management system for budget preparation, and a preliminary database system interface. Although the system's data and knowledge bases have developed around the Knowledge Systems Laboratory's organizational and operational parameters, each of the components of FRM is designed for application to the management problems of other organizations. Several parts of the FRM system have been implemented and are used on a daily basis at Stanford, while other portions have not yet progressed beyond the planning stage. The FRM architecture allows new modules and applications to be added and integrated to provide increasing functionality as programs are built. The knowledge base is extensible to include heuristics, constraints,and rules that can encode much of the expertise of a human manager as management techniques and goals are better understood.

24324 **(UJV—7639-V) Progress report for 1985.** Havelka, S. (ed.). (Ustav Jaderneho Vyzkumu CSKAE, Rez (Czechoslovakia)). Jan 1986. 62p. (In Czech). NTIS (US Sales Only), PC A04/MF A01. File Number DE87701629.

A summary is presented of the major scientific, technical and economic results achieved by the Institute of Nuclear Research in Rez near Prague in the year 1985. Research and development was mainly oriented to nuclear power: problems of nuclear safety of PWR reactors were studied; experiments were made and evaluated in the field of reactor physics of PWR's, in cooperation with CMEA countries also of fast reactors; the properties were tested of reactor materials under various conditions; in-pile diagnostic techniques were developed for WWER and BN reactors. Research in the field of fuel cycle chemistry was mainly oriented to the treatment of radioactive waste waters and solutions, to the solidification of radioactive wastes, and to the fluoride technology of reprocessing spent fuel from fast reactors. Attention was also devoted to the compilation of technical standards. Also tackled were research problems related to the use of ionizing radiation, such as radiation processing, the research and development of radiopharmaceuticals, neutron activation analysis and neutron radiography. Attention was also devoted to radiation safety. The experimental equipment of the Institute also served the production of radiopharmaceuticals, the development and manufacture of semiconductor detectors, the analysis of samples for the Central Testing Laboratory, and experimental irradiation. The Institute also provided computer and information services. The social programme was oriented to personnel development, housing and catering, health care, the work environment and the recreation of employees. The Institute has achieved good economic results. (J.B.).

24325 **Coping with terrorism.** Kerr, D.M. (Los Alamos National Lab., NM). *Terrorism;* 8: No. 2, 113-126(1985).

Terrorism has emerged as a tool of low-intensity conflict used to undermine Western and moderate governments. There is evidence that the US faces a new threshold of terrorist threat both at home and abroad because the tools are available, media attention is global and often undisciplined, and the motives for terrorist attack span a wide spectrum. The US has no internal consensus of how to respond to acts of terrorism. The goal of the terrorists is to erode faith in the government and the democratic system. The author analyzes the threat and examines opportunities for an adequate response. Among his recommendations are to make infrastructure networks more robust and less vulnerable, the use of new technologies that enhance security, clear guidelines for intelligence gathering and analysis, specially trained response forces, and political moderation and cooperation.

24326 **(AD-A—175641/0/XAB) Parallel processing of networks. Final technical report.** Deo, N. (Washington State Univ., Pullman (USA)). 15 Nov 1986. 8p. NTIS, PC A02/MF A01.

Recent advancements in hardware technology have made it attractive to use many processors in parallel that cooperate and coordinate their efforts to solve a problem much faster. Such parallel computers are currently being developed, designed, and experimented with. A few, with limited parallelism, are available as commerical products, such as, Intel's iPSC, NCUBE, Sequent's Balance 8000 and 21000. It appears certain that computers are going to be in wide use in 1990's. However, the art of designing parallel algorithms is far behind that of sequential algorithms. The goal of this project was to develop strategies for designing parallel algorithms and computer programs for a certain class of problems consisted of various graph problems that arise on large, sparse, real-life transportation and communication networks. The parallel computer deemed most suited for such problems is a multiple-instruction, multiple-data stream (MIMD) machine.

24327 **(ANL—86-55) Activities and operations of the Advanced Computing Research Facility, July-October 1986.** Pieper, G.W. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006312.

Research activities and operations of the Advanced Computing Research Facility (ACRF) at Argonne National Laboratory are discussed for the period from July 1986 through October 1986. The facility is currently supported by the Department of Energy, and is operated by the Mathematics and Computer Science Division at Argonne. Over the past four-month period, a new commercial multiprocessor, the Intel iPSC-VX/d4 hypercube was installed. In addition, four other commercial multiprocessors continue to be available for research - an Encore Multimax, a Sequent Balance 21000, an Alliant FX/8, and an Intel iPSC/d5 - as well as a locally designed multiprocessor, the Lemur. These machines are being actively used by scientists at Argonne and throughout the nation in a wide variety of projects concerning computer systems with parallel and vector architectures. A variety of classes, workshops, and seminars have been sponsored to train researchers on computing techniques for the advanced computer systems at the Advanced Computing Research Facility. For example, courses were offered on writing programs for parallel computer systems and hosted the first annual Alliant users group meeting. A Sequent users group meeting and a two-day workshop on performance evaluation of parallel computers and programs are being organized.

24328 **(ANL/MCS-TM—87) Experiments with OR-parallel logic programs.** Disz, T.; Lusk, E.; Overbeek, R. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Feb 1987. Contract W-31109-ENG-38. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006882.

We present here the results of several experiments involving OR-parallelism, based on the implementation of a parallel Warren Abstract Machine at Argonne National Laboratory. The experi-

ments illustrate a variety of effects resulting from various types of programs, and raise issues that must be dealt with in any parallel implementation. We also demonstrate a tool for obtaining a visual representation of the parallelism.

24329 **(CONF-861270—1) NESC [National Energy Software Center] experience with NJE.** Johnson, P.L. (Argonne National Lab., IL (USA)). 1986. Contract W-31109-ENG-38. 3p. NTIS MF A01; 2; GPO Dep. File Number DE87007033.

From NJE workshop on NJE; Gif-sur-Yvette, France (10 Dec 1986).

NJE places sixth in the top ten list of NESC best sellers. The category P (General Mathematical and Computing System Routines) is found 5 times on this list. In addition to NJE in this category, there is the computer algebra system DOE-MACSYMA, the general mathematical subroutine library SLATEC, the matrix eigenvalue/vector package EISPACK3, and the simultaneous linear algebraic equation analyzer and solver LINPACK. In category U (Chemistry) can be found the Advanced System for Process Engineering process simulator and economic evaluation package ASPEN and the internal combustion engine fluid dynamics package KIVA. The light water reactor, loss of coolant analysis program RELAP5/MOD1, the building energy analysis program DOE2.1 and the graphics program MAPPER make up the rest of the programs in the top ten list.

24330 **(CONF-870399—1) Formal modeling and analysis of fault-tolerance properties for software.** Chisholm, G.H.; Kljaich, J.; Smith, B.T.; Wojcik, A.S. (Argonne National Lab., IL (USA); Michigan State Univ., East Lansing (USA). Dept. of Computer Science). 1987. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007006.

From 9. international conference on software engineering; Boulder, CO, USA (30 Mar 1987).

This paper describes the application of modeling and analysis techniques to software that is designed to execute on the Charles Stark Draper Laboratory (CSDL) Fault-Tolerant Processor, referred to as the FTP. The work reported here is part of a hardware/software modeling and analysis project. In an earlier paper we have described the hierarchical modeling technique based upon Petri Nets, the formal analysis techniques based upon the automated reasoning software ITP/LMA, and the specific application for which the software was designed. The software performs sensor validation of four independent measures (signals) from the Experimental Breeder Reactor-II operated by Argonne National Laboratory. From the validated signals, a flow trip signal is formulated for the reactor safety system. In the previous paper, we demonstrated fault-tolerance of the FTP's data exchange instructions to failures in the hardware. In this paper, we demonstrate that the same modeling and analysis techniques apply to proving the fault-tolerance of the software in the hardware, provided the validation algorithms have a certain generic structure. The approach that has been developed has provided insight into formal software specification as well as into the generation of test vectors for software and has provided a continuity between specification, design, analysis, and testing.

24331 **(DOE/ER/25026—2) A method for the spatial discretization of parabolic equations in one space variable.** Skeel, R.D.; Berzins, M. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Feb 1987. Contract FG02-87ER25026;AC02-76ER02383. 57p. (UIUCDCS-R—87-1319; UILU-ENG—87-1705). NTIS MF A01; 2; GPO Dep. File Number DE87005991.

The aim of this paper is to describe and analyze a new spatial discretization method for parabolic equations in one space variable: Ordinary and parabolic partial differential equations in one space variable x often have a singularity due to the use of polar cylindrical or spherical coordinates. The method we propose is a simple piecewise nonlinear Galerkin/Petrov-Galerkin method which is second order accurate in space. (It supersedes the method proposed by Skeel). The case m = 1 involves the use of the logarithm function, which is probably the only accurate way to model the logarithmic singularity present in the solution. A code based on a variant of the proposed method has already been included as part of the SPRINT package of Berzins, Dew, and Furzeland. The method that we propose here will be distributed in the next release of the D03P (parabolic equations) section of the NAG Library. 18 refs.

24332 **(ENEA-RT-TIB—86/18) Experience on several devices for a SAS/GRAPH general application sample library.** Vaccari, M. (ENEA, Bologna (Italy). Dipartimento Tecnologie Intersettoriali di Base). 1986. 27p. (CONF-8604302—1). NTIS (US Sales Only), PC A03. File Number DE87900154.

From SEUGI '86: conference of European SAS users; Brighton, UK (15 Apr 1986).

A Contribution to the "SEUGI '86" Conference of European SAS Users, held in Brighton on April 15-18th, 1986 is presented. The paper compares experiences on several devices for the creation of a sample graphical library of SAS/GRAPH applications developed in cooperation with users of different working fields. Examples are discussed and shown, which were made on IBM terminals, Tektronix terminals, plotters like Benson, Calcomp and Nicolet-Zeta.

24333 **(HEDL-SA—3459-FP) Classical computer assisted instruction versus intelligent computer assisted instruction.** Gardner, P.R. (Hanford Engineering Development Lab., Richland, WA (USA)). 1986. Contract AC06-76FF02170. 21p. (CONF-860209—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005463.

From 27. conference of the Association for Development of Computer Based Instructional Systems; New Orleans, LA, USA (3 Feb 1986).

Computer-aided instruction has two basic designs, a classical construction (CCAI) or a design based on the principles of artificial intelligence (ICAI). These two types of instructions are compared and contrasted. (WRF)

24334 (JAERI-M—86-009, pp 147-166) **Some problems on high speed computation of Monte Carlo code.** Asai, Kiyoshi. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1986. (In Japanese). NTIS (US Sales Only), PC A10/MF A01. File Number DE87780110. (CONF-8509372—).

From 2. seminar on software development in nuclear energy research; Tokai, Japan (18 Sep 1985).

Three computational techniques and computer architectures of vector, scalar parallel and vector parallel processing for computation of neutron transport by the Monte Carlo method are overviewed. Consistencies of the techniques with the current computer architecture, their merits and demerits are also discussed. The vector processing of the neutron transport by Monte Carlo method encounters such obstacles as the low computational density in a statement, many nested conditional branches, indirect addressing, decreasing vector length, recurrence expression, etc. Addition of new pipelines to the current vector processor, however, removes the obstacles to a considerable degree. The scalar parallel processing may be suitable for the Monte Carlo computation when we can provide a number of processors and an amount of memory to each processor. As for the vector-parallel processing, a pipeline parallel processor architecture in which vector processors with a large local memory are linearly connected will be best suitable for high speed computation of the current Monte Carlo codes. This architecture will be the most powerful candidate for the next general purpose super-computer.

24335 (JAERI-M—86-009, pp 167-182) **Numerical methods for vectorization.** Tokunaga, Yasuo. (Fujitsu Ltd., Tokyo, Japan). Mar 1986. (In Japanese). NTIS (US Sales Only), PC A10/MF A01. File Number DE87780110. (CONF-8509372—).

From 2. seminar on software development in nuclear energy research; Tokai, Japan (18 Sep 1985).

Many nuclear codes are hitherto adapted for the vector computer in the JAERI. However, in order to make efficient use of characteristics of the vector computers, in addition to the programming techniques, it is required to rewrite a program adapting a more appropriate numerical methods. This report shows experiences on numerical methods and programmings for the vector com-

puters, which are obtained through vectorizations of programs in the JAERI computer center.

24336 (JAERI-M—86-009, pp 183-195) **GRASYS: a computer program for graphical presentation of nuclear power plant condition.** Ohkubo, Shuji; Fujiki, Kazuo; Kohsaka, Atsuo. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1986. (In Japanese). NTIS (US Sales Only), PC A10/MF A01. File Number DE87780110. (CONF-8509372—).

From 2. seminar on software development in nuclear energy research; Tokai, Japan (18 Sep 1985).

A graphic synthetic system GRASYS which has functions to create, registrate, reference and edit graphical data is presented. On the GRASYS a graph corresponds to a segment. The segment is a set of commands. A complex figure may be created by editing segments in a conventional mode. Time dependent graphs can also be handled as segments. Thus the user can represent the status of a nuclear power plant in case of an accident. GRASYS is made as a general purpose graph handler so that it may be used for other applications.

24337 (JAERI-M—86-009, pp 196-208) **Application of visual simulation technique to nuclear engineering field.** Miwa, Tateo. (Mitsubishi Research Inst., Tokyo, Japan). Mar 1986. (In Japanese). NTIS (US Sales Only), PC A10/MF A01. File Number DE87780110. (CONF-8509372—).

From 2. seminar on software development in nuclear energy research; Tokai, Japan (18 Sep 1985).

Various computer simulations are made in the field of nuclear engineering. Results from these simulations are often displayed in graphics, and a plotter-based stop motion picture using vector expression has been mainly employed for this purpose. However, this method is not sufficient when thermal field is to be displayed. Especially when the understanding is required of the macroscopic behavior of the whole system to be analyzed, the colour expression using luster techniques is more appropriate, and the animation method is further desirable. The colour-display of temperature of the thermal fluid and the visual-display of safety analysis simulation for a nuclear power plant are shown as examples. The former shows the results from the thermal hydraulic analysis of the primary coolant system of a reactor by the animation techniques using colour-display. The latter shows an example of a typical visualization of the behaviour of the nuclear power plant at the accident of the primary system. Both these two pictures are very effective for understanding of macroscopic behaviour of the whole system.

24338 (JAERI-M—86-023) **Graphic utilities 'GPREP' and 'LIBGR'.** Hirayama, Toshio; Azumi, Masafumi. (Japan Atomic Energy Research Inst., Tokyo). Mar 1986. 69p. (In Japanese). NTIS (US Sales Only), PC A04/MF A01. File Number DE87701586.

Plotting utilities, which are widely appreciable to problems of computational physics, have been developed as a part of a library system for a one dimensional tokamak transport code. Utility routines are composed of two procedures, i.e., the pre-processor "GPREP" registrates graphic data to a data file with a set format, and "LIBGR" processes the data to match with the required format of "ARGUS" and plots the graph. The regular form of data by "GPREP" enables us to read out data without any information on data recording so that these utilities are very usefull for dealing with a lot of disorder data with different type.

24339 (LA—10829-MS) **REZONE: A method for automatic rezoning in two-dimensional Lagrangian hydrodynamics problems.** Wallick, K.B. (Los Alamos National Lab., NM (USA)). Mar 1987. Contract W-7405-ENG-36. 114p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87006324.

A method for automatic rezoning in two-dimensional Lagrangian hydrodynamics problems is described. This method conserves mass, internal energy, and directed kinetic energy as these quantities are transferred from one zone to another. The general procedure is to run the problem hydrodynamically while monitoring the mesh for distortion. When the distortion becomes severe, the problem is interrupted and the REZONE code takes over to clear up the mesh distortion. This process is continued as needed during the entire run of the problem. Only those areas of the mesh that show distortion are rezoned. The purpose of this method is to keep hydrodynamic problems running while disturbing the normal calculations as little as possible. With this method the overall shape of the mesh will still indicate the natural flow of the hydrodynamics problems. 4 refs., 78 figs.

24340 (LA-UR—87-87) **The S/sub N//Monte Carlo response matrix hybrid method.** Filippone, W.L.; Alcouffe, R.E. (Los Alamos National Lab., NM (USA); Arizona Univ., Tucson (USA). Dept. of Nuclear and Energy Engineering). 1987. Contract W-7405-ENG-36. 16p. (CONF-870424—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005112.

From American Nuclear Society international meeting on advances in reactor physics, mathematics and computation; Paris, France (27 Apr 1987).

A hybrid method has been developed to iteratively couple S/sub N/ and Monte Carlo regions of the same problem. This technique avoids many of the restrictions and limitations of previous attempts to do the coupling and results in a general and relatively efficient method. We demonstrate the method with some simple examples.

24341 (LA-UR—87-352) **Pattern selection and competition in near-integrable systems.** Bishop, A.R.; McLaughlin, D.W. (Los Alamos National Lab., NM (USA); Arizona Univ., Tucson (USA)). 1986. Contract W-7405-ENG-36. 32p. (CONF-8608163—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87006068.

From Structure, coherence, and chaos in dynamical systems conference; Lyngby, Denmark (1 Aug 1986).

Pattern selection and competition in certain near-integrable systems are discussed. These systems provide models for controlled studies of low dimensional attractors in high (infinite) dimensional systems. Four examples from damped, driven pendulum rings are summarized in the order of increasing spatial complexity of their chaotic attractors. These examples illustrate the use of numerical and analytical techniques from soliton mathematics to study properties of chaotic attractors. In particular, the connection of (unperturbed) homoclinic states with instabilities of spatial patterns, with interactions between patterns, and as possible sources of temporal chaos is emphasized. 16 refs., 9 figs.

24342 (LA-UR—87-673) **Parallel graph reduction on a supercomputer: A status report.** Michelsen, R.; Smith, L.; Williams, E.; Yantis, B. (Department of Defense, Ft. Meade, MD (USA); Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 6p. (CONF-8610257—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87006066.

From Santa Fe graph reduction workshop; Santa Fe, NM, USA (1 Oct 1986).

We describe an ongoing effort to develop a parallel graph reduction run-time system hosted on a multiprocessor supercomputer. This run-time system is presently augmented by the functional language compiler of the ALFALFA system. Admittedly, parallel graph reduction is hardly a novel idea. The interesting notion is the provision of a parallel execution environment sufficiently powerful to support development of large prototypical scientific and symbolic codes in a functional language. This will allow the investigation of the functional programming paradigm within these application domains in an empirical fashion. In this paper, we discuss the motivation for the effort, describe the basic elements of the implementation, and provide some preliminary insight distilled from our experience with an initial version of the run-time system.

24343 (NORDITA—84/47-Prepr.) **Technique for filling gaps in time series with complicated power spectra.** Brown, T.M.; Christensen-Dalsgaard, J. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). 1984. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87751246.

Fahlman and Ulrych (1982) describe a method for estimating the power and phase spectra of gapped time series, using a maximum-entropy reconstruction of the data in the gaps. It has proved difficult to apply this technique to solar oscillations data, because of the great complexity of the solar oscillations spectrum. We describe

a means for avoiding this difficulty, and report the results of a series of blind tests of the modified technique. The main results of these tests are: 1. Gap-filling gives good results, provided that the signal-to-noise ration in the original data is large enough, and provided the gaps are short enough. For low-noise data, the duty cycle of the observations should not be less than about 50%. 2. The frequencies and widths of narrow spectrum features are well reproduced by the technique. 3. The technique systematically reduces the apparent amplitudes of small features in the spectrum relative to large ones.

24344 (ORNL/RSIC—13-Vols.1-3-Rev.) Abstracts of digital computer code packages assembled by the Radiation Shielding Information Center. Carter, B.J.; Maskewitz, B.F. (Oak Ridge National Lab., TN (USA)). Apr 1985. Contract AC05-84OR21400. 286p. NTIS, PC A13/MF A01; 1; GPO Dep. File Number DE87006393.

This publication, ORNL/RSIC-13, Volumes I to III Revised, has resulted from an internal audit of the first 168 packages of computing technology in the Computer Codes Collection (CCC) of the Radiation Shielding Information Center (RSIC). It replaces the earlier three documents published as single volumes between 1966 to 1972. A significant number of the early code packages were considered to be obsolete and were removed from the collection in the audit process and the CCC numbers were not reassigned. Others not currently being used by the nuclear R and D community were retained in the collection to preserve technology not replaced by newer methods, or were considered of potential value for reference purposes. Much of the early technology, however, has improved through developer/RSIC/user interaction and continues at the forefront of the advancing state-of-the-art.

24345 (PB—87-134581/XAB) High parallelism and an effective reasoning procedure. Kung, C.H. (Trondheim Univ. (Norway). Computing Centre). 3 Mar 1986. 28p. NTIS, PC PC E04/MF E04.

Published as Selskapet for Industriell og Teknisk Forskning, Trondheim (Norway) rept. no. STF14-A86026.

The paper presents a reasoning procedure characterized by high parallelism in the sense that an unlimited number of CPU's can be used to carry out the computation in parallel. It is an indirect-proof method based upon Prawitz's work and Robinson's unification algorithm. The method is characterized by bit manipulation rather than symbol manipulation. Its parts can be implemented by VLSI pipelines.

24346 (PB—87-137196/XAB) Agenda for improved evaluation of supercomputer performance. Final report. (National Research Council, Washington, DC (USA)). 1986. 66p. NTIS, PC A04/MF A01.

A substantial scientific community and body of literature are devoted to computer performance measurement and evaluation. Impressive successes have been achieved in theory, prediction, and experimentation for systems that have sequential architecture and applications that involve data handling and manipulation. Less successful and mature are the methods and measurements for evaluation of systems performance when scientific problems are run on supercomputers of diverse architectural characteristics. The complexity of these systems, together with the increasing diversity of computing architectures becoming available, makes evaluation of supercomputer performance more problematical, yet more important, than for the more-common midrange computer systems. Moreover, what is learned about the performance of operational systems can be expected to guide the design of future systems.

24347 (RFP—4059) Computer-Aided-Instruction (user/CSO computer security training). Twyman, J.A. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). 1987. Contract AC04-76DP03533. 5p. (CONF-870565—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE87004894.

From Department of Energy computer security group conference; Albuquerque, NM, USA (5 May 1987).

This paper discusses a Computer-Aided-Instruction (CAI) course that has been implemented at Rocky Flats. Trying to train 2000 computer users and Computer Security Officers (CSO) has been a real dilemma at Rocky Flats. In order to resolve this problem, our Training Department implemented a CAI training course on Computer Security. Presently, we are training approximately 100 users/CSOs per month, and soon these numbers should increase. The duration of the User course is about an hour and the CSO's is about an hour and a half. CAI is being used on the unclassified VAX computer system in conjunction with IBM PC XTs.

24348 (RFP—4084) Statistical applications at Rocky Flats. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). [1987]. Contract AC04-76DP03533. 19p. NTIS, PC A02. File Number DE87007050.

After three years as an industrial statistician with Rockwell International at Rocky Flats Plant (RFP), engaging in general statistical consulting, the speaker has faced a wide and varied range of statistical problems. The various applications at RFP touch all areas of statistics including experimental design, sampling, calibration problems, sequential testing and loutliner detection. The speaker will describe several interesting problems he has worked on and discuss the difficulties sometimes encountered at RFP. In conclusion the speaker will evaluate how well his education and training has prepared him for his present line of work. It is hoped this will stimulate discussion from the audience on how to best train a statistician for statistical consulting in industry.

24349 (SAND—87-0256C) Random functions and their small cycles. DeLaurentis, J.M. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 8p. (CONF-870255—1). NTIS, PC A02. File Number DE87005850.

From 18. southeastern international conference on combinatorics: graph theory computing; Boca Raton, FL, USA (23 Feb 1987).

Random functions often arise as a model for the pseudo-random functions generated by cryptosystems. The directed graph which is naturally associated with each random function γ is the graph having a vertex for each element of the domain and a directed edge from vertex i to vertex j if $\gamma(i) = j$. The components of such a graph consist of a cycle with trees attached to the nodes of the cycle. A number of experiments which involve pseudo-random functions select an initial vertex at random and then iterate the function until a cycle is detected. (WRF).

24350 (SAND—87-0489) An IGES electrical test: CADCAM-035. Parks, R.E. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1987. Contract AC04-76DP00789. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87007525.

It is now possible to exchange electrical design, documentation, and manufacturing data using IGES. This report discusses the results of processing a version 2.0 IGES electrical test file into a particular CAD system environment and the resulting data exchange issues.

24351 (UCID—20935) Supercomputer environments for hardware and software technology forecast. Mendicino, S.F. (ed.). (Lawrence Livermore National Lab., CA (USA)). 30 Dec 1987. Contract W-7405-ENG-48. 36p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87007523.

The price-performance revolution in microelectronics and the development of cost-effective communication networks have set the stage for an integrated view of large-scale computing. In the next decade, the supercomputer, the mass storage system, the communication network, and the interactive "front ends" will be viewed as elements of a total hardware environment whose resources are managed by a single distributed operating system. Since much of the burden of providing effective service in such an environment is placed on software, this report describes not only what potentially lies ahead in the various hardware areas, but also operating systems and related software will evolve over the next decade to complement the hardware.

24352 **(UCID—21011-Vol.1) System survey report for DOEDEF Translator Module Pool A: Volume 1.** Wimple, C. (Lawrence Livermore National Lab., CA (USA)). 17 Feb 1987. Contract W-7405-ENG-48. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87007518.

The Department of Energy Data Exchange Format (DOEDEF) Translator Module Pool A (hereafter referred to as the "pool") is intended to reduce the manpower required to rewrite the DOEDEF translator software already in existence throughout the Department of Energy Nuclear Weapons Complex (DOE NWC). Each portion of the DOEDEF exchange system and therefore each site's DOEDEF translator software must be rewritten during the transition from Phase 1.0 to Phase 1.5 of DOEDEF. By providing a pool, some of which (if not all) can be used by multiple NWC sites, the effort required to move from Phase 1.0 to Phase 1.5 can be reduced.

24353 **(UCRL—53783) Identifying and selecting a computerized image editing/processing system.** Barrow, R.J. (Lawrence Livermore National Lab., CA (USA)). Feb 1987. Contract W-7405-ENG-48. 146p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87006902.

Within the Defense Sciences Department at LLNL there was a critical need for production of professional quality viewgraphs for various Department presentations. The current process was both time consuming and costly because editing and redrawing of designs were done by hand; thus this study was made both at LLNL and with various computer companies outside the Laboratory, to examine computer systems that would be applicable to producing high quality viewgraphs in a short turn-around time. An extensive literature research and informal interviews were conducted on-site with middle and upper management, technical illustrators and artists, drafting supervisors, and security personnel, and off-site with company suppliers and vendors of computer systems' hardware and software. The conclusion was drawn that the desk-top Macintosh Plus was the current optimum system available.

24354 **(UCRL—96070) Patterns from models of dissipative systems.** Keller, P.; Duong-van, M. (Lawrence Livermore National Lab., CA (USA)). Feb 1987. Contract W-7405-ENG-48. 4p. (CONF-870159—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006823.

From International conference on physics of chaos and systems far from equilibrium; Monterey, CA, USA (11 Jan 1987).

We use various computer graphics techniques to study complex systems - computer graphics help us to decide what and how to measure. We use a recursion relationship as a way of generating instabilities and turbulence on a two-dimensional lattice. We have been successful in recovering many patterns observed in recent experiments, and mathematical analyses of some experiments also corroborate the mathematical analyses of some of our pictures.

24355 **An investigation into the use of "expert systems" for system-wide diagnostics.** Booth, A.W.; Carroll, J.T. (Fermi National Accelerator Lab., MS 223, P.O. Box 500, Batavia, IL 60510). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-34**: No. 1, 151-156(Feb 1987). (CONF-861007—).

From Nuclear science and nuclear power systems symposium; Washington, DC, USA (29 Oct 1986).

This paper has explained how expert systems function and how they might be used to provide a FASTBUS system-wide diagnostic program. The authors propose that the system be used to diagnose the FASTBUS system at FERMILAB's CDF experiment. There are many important areas which have not been addressed in great detail in this paper (such as the roles of the knowledge engineer and the expert during the knowledge acquisition phase), but the central idea of the embodiment of an expert skill in a computer is clear. Development of a system-wide diagnostic program requires building knowledge from all our system experts, into the system. To expand the expert system beyond its network diagnostic ability, to include finding faulty modules would be worthwhile. Having an "intelligent" assistant who is on shift 24 hours each day would relieve the "real" experts from laborious, time-consuming and sometimes repetitive tasks undertaken during the debugging process. The system could also provide a testbed for evaluation and comparison when considering future expert-system applications such as "run-control" and "data analysis". In the context of a system-wide diagnostic program, an "expert system" is not intended to replace human experts but simply to help them. It is envisaged that there will always be important interaction between the human expert and the "expert system". The incremental development of the "expert system" should ensure that it is useful in the short term (by debugging to the S.I./segment level for example), and even more useful in the medium to longer term as it acquires more and more knowledge and the ability to debug to the module level. Expert systems exist and are working successfully in many problem domains. See the bibliography for examples of "expert systems" built in the high energy physics environment.

24356 **Review of the status of the fastbus standard routine specification.** Pordes, R. (Computing Dept., Fermilab, P.O. Box 500, Batavia, IL 60510). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-34**: No. 1, 162-165(Feb 1987). (CONF-861007—).

From Nuclear science and nuclear power systems symposium; Washington, DC, USA (29 Oct 1986).

Within the next few months the FASTBUS Software Working group hopes to distribute the Specification for Standard Routines for FASTBUS. The draft specification will go to the members of the overseeing NIM committee for review. This paper presents the current status of the specification. It includes a list of the goals of the specification; some details of the concepts embedded in it; as well as an overview of the software implementations of the previously distributed draft versions of the specification.

24357 **The Enhanced Segment Interconnect for FASTBUS data communications.** Machen, D.R.; Downing, R.W.; Kirsten, F.A.; Nelson, R.O. (Scientific Systems International, Los Alamos, NM). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-34**: No. 1, 166-169(Feb 1987). (CONF-861007—).

From Nuclear science and nuclear power systems symposium; Washington, DC, USA (29 Oct 1986).

The Enhanced Segment Interconnect concept (ESI) for improved FASTBUS data communications is a development supported by the U.S. Department of Energy under the Small Business Innovation Research (SBIR) program. The ESI will contain both the Segment Interconnect (SI) Tyhpe S-1 and an optional buffered interconnect for store-and-forward data communications; fiber-optic-coupled serial ports will provide optional data paths. The ESI can be applied in large FASTBUS-implemented physics experiments whose data-set or data-transmission distance requirements dictate alternate approaches to data communications. This paper describes the functions of the ESI and the status of its development, now 25% complete.

24358 **Almost sure stability of linear stochastic systems with poisson process coefficients.** Li, C.W.; Blankenship, G.L. (Dept. of Mathematical Studies, Hong Kong Polytechnic, Hung Hom, Kowloon, Hong Kong). *SIAM Journal on Applied Mathemadics;* **46**: No. 5, 875-911(Oct 1986).

The authors consider the problem of determining the sample path stability of a class of linear stochastic differential equations with point process coefficients. Necessary and sufficient conditions are obtained which are similar to those derived by a previous study for diffusion processes. The conditions are based on theorems on the asymptotic behavior of products of random matrices. Estimates on the probabilities of large deviations for stable processes are also given, together with a result on the stabilization of unstable systems by feedback controls.

24359 **Parallel supercomputing today and the cedar approach.** Kuck, D.J.; Davidson, E.S.; Lawrie, D.H.; Sameh, A.H. (Univ. of Illinois, Urbana). *Science (Washington, D.C.);* **231**: 967-974(28 Feb 1986). Contract FG02-85ER25001.

More and more scientists and engineers are becoming interested in using supercomputers. Earlier barriers to using these machines are disappearing as software for their use improves. Meanwhile, new parallel supercomputer architectures are emerging that may provide rapid growth in performance. These systems may use

a large number of processors with an intricate memory system that is both parallel and hierarchical; they will require even more advanced software. Compilers that restructure user programs to exploit the machine organization seem to be essential. A wide range of algorithms and applications is being developed in an effort to provide high parallel processing performance in many fields. The Cedar supercomputer, presently operating with eight processors in parallel, uses advanced system and applications software developed at the University of Illinois during the past 12 years. This software should allow the number of processors in Cedar to be doubled annually, providing rapid performance advances in the next decade. 43 references, 4 figures.

24360 ANL/Star project: a new architecture for large scale theoretical physics computations. Rushton, A.M. (Argonne National Lab., IL). pp 370-374 of Computing in high energy physics. Proceedings of the conference held in Amsterdam, The Netherlands, 25-28 June, 1985. Hertzberger, L.O.; Hoogland, W. (eds.). Amsterdam, Netherlands; North-Holland (1986). (CONF-8506157—).

From Conference on computing in high energy physics; Amsterdam, Netherlands (25 Jun 1985).

The project consists of two phases, each of which has goals of substantial physics content on its own. In phase I, Star Technologies' ST-100 was selected as the array processor for the prototype coupled system and was installed on a Vax II/750 host. The goals with this system are to institute a substantial program in computational physics at Argonne based on the power provided by this system and thereby to gain experience with both the hardware and software architecture of the ST-100. In Phase II, it is proposed to build a prototype consisting of two coupled array processors with shared memory to prove that this design can achieve high speed and efficiency in a readily extensible and cost-effective manner. This will implement all of the hardware and software modifications necessary to extend this design to as many as 64 (or more) nodes. First the architecture of the ST-100 is discussed. Then the physics program currently being implemented on a single system is described. Finally the proposed design of the coupled system is presented. (Auth.).

24361 Computer-graphic visualization of dynamics. Stewart, H.B. (Brookhaven National Lab., Upton, NY). *Transactions of the American Nuclear Society;* **53**: 243-244(1986). (CONF-861102—).

From American Nuclear Society and Atomic Industrial Forum joint meeting; Washington, DC, USA (16 Nov 1986).

As engineered systems become increasingly sophisticated and complex, questions of efficiency, reliability, and safety demand the application of more powerful methods of analysis. One indication of this is the accelerating trend away from purely static or quasi-steady system modeling toward models that include essentially dynamic behavior. It is here that the qualitative ideas of nonlinear dynamics, dealing as they do with the most typical behavior in real dynamical systems, can be expected to play an increasingly prominent role. As part of a continuing investigation of the most important low-order differential equations, an interactive computer graphics environment has been created for the study of systems in three-dimensional phase space. This environment makes available the basic control of both numerical simulation and graphic visualization by a specially designed menu system. A key ingredient in this environment is the possibility of graphic communication not only from machine to man, but also from man to machine. Thus to specify the starting point for a numerical integration, for example, the user points to a location in phase space on the screen of the graphics terminal (using crosshairs or a mouse and cursor), bypassing the necessity to give numerical values of the phase-space coordinates. By devising a flexible computer interface which implements conceptual approaches to phase-space analysis of dynamical systems, significant advances in understanding of prototypical differential equations have been achieved.

24362 Oscillation criterion for linear second-order differential systems. Atkinson, F.V.; Kaper, H.G.; Kwong, M.K. *Proceedings of the American Mathematical Society;* **94**: No. 1, 91-96(May 1985). Contract W-31-109-ENG-38.

This article is concerned with the oscillatory behavior at infinity of the solution y: [a, ∞) → R/sup n/ of a system of n second-order differential equations, y″(t) + Q(t)y(t) = 0, t epsilon [a, ∞); Q is a continuous matrix-valued function on [a, ∞) whose values are real symmetric matrices of order n. It is shown that the solution is oscillatory at infinity if (at least) n - 1 eigenvalues of the matrix integral/sub a//sup t/Q(t) dt tend to infinity as t → ∞. 7 references.

24363 Perspectives on superconducting. Buzbee, B.L.; Sharp, D.H. (Los Alamos National Lab., NM). *Science (Washington, D.C.);* **227**: No. 4687, 591-597(8 Feb 1985).

This article provides a brief look at the current status of supercomputers and supercomputing in the US. It addresses a variety of applications of supercomputers and the characteristics of a large modern supercomputing facility, the radical changes in the design of supercomputers that are impending, and the conditions that are necessary for a conducive climate for the further development and application of supercomputers. 15 references, 3 figures, 3 tables.

24364 Role of linear recursive estimators in time series forecasting. Pack, D.J.; Pike, D.H.; Downing, D.J. (Oak Ridge National Lab., TN). *Management Science;* **31**: No. 2, 188-190(Feb 1985). Contract AC05-84OR21400.

This paper presents a descriptive synthesis of a number of a linear recursive estimator (LRE) procedures for time series forecasting, i.e., procedures which involve parameter updates proportional to the last period forecast error. It is stressed that both constant and variable parameter procedures exist among LRE's. General requirements for stability of parameter estimates are given, as are general forms for parameter covariance matrices that appear in forecast variance determinations. Procedures explicitly considered are the Kalman filter, dynamic autoregression, the Carbone-Longini adaptive estimation procedure, generalized least squares, Widrow's least mean square, and the Makridakis-Wheelwright generalized adaptive filtering. 11 references.

24365 Oscillation of two-dimensional linear second-order differential systems. Kwong, M.K.; Kaper, H.G. (Argonne National Lab., IL). *Journal of Differential Equations;* **56**: No. 2, 195-205(Feb 1985). Contract W-31-109-ENG-38.

This article is concerned with the oscillatory behavior at infinity of the solution y: [a, ∞) → R^2 of a system of two second-order differential equations, y″(t) + Q(t) y(t) = 0, t epsilon[a, ∞); Q is a continuous matrix-valued function on [a, ∞) whose values are real symmetric matrices of order 2. It is shown that the solution is oscillatory at infinity if the largest eigenvalue of the matrix integral/sub a//sup t/ Q(s) ds tends to infinity as t → ∞. This proves a conjecture of D. Hinton and R.T. Lewis for the two-dimensional case. Furthermore, it is shown that considerably weaker forms of the condition still suffice for oscillatory behavior at infinity. 7 references.

24366 Optimal solution for maximizing the probability of retention in PPS sampling. Wright, T.; Tsao, H. (Oak Ridge National Lab, TN). *Linear Algebra and Its Applications;* **67**: 67-80(1985). Contract AC05-84OR21400.

A direct alternative proof of Keyfitz's optimal solution to the problem of maximizing the probability of retention in sampling on a second occasion is given, using techniques of elementary linear algebra. The proof and comments help one to better understand Keyfitz's solution, and they clearly demonstrate that the closed form solution of Keyfitz is one of a possible infinity of solutions offered by a linear programming approach. The authors also give one of those other solutions offered by linear programming, which is easy to obtain by hand calculations using only the operation of subtraction. 11 references, 4 tables.

24367 A simulation and experimental method on planning and execution of straight line manipulator trajectories. Sze, J.S.; Wang, J.C. (Lawrence Livermore National Lab., Livermore, CA 94550). pp 591-598 of Proceedings of the 16th annual Pittsburgh conference on modeling and simulation. Hanham, R.; Vogt, W.G.; Mickie, M.H. Pittsburgh, PA; University of Pittsburgh (1985). (CONF-8504134—).

From 16. Instrument Society of America modeling and simulation conference; Pittsburgh, PA, USA (25 Apr 1985).

The manipulation of the end-effector of industrial robots in general is specified by passing through a sequence of points in Cartesian space to accomplish given tasks. The effectiveness of such motion specifications will greatly increase if the end-effector moves in a straight line between the specified points. The fundamental difficulty in achieving straight line motion is that the linear interpolation between the joint space description of two points does not achieve Cartesian space straight line motion, and conversely. By using computer simulation techniques, the Cartesian path motion can be obtained. This paper discusses a method of planning and executing a Cartesian path manipulation by using a microcomputer. In the motion planning operation the kinematic equations are solved. A simulation subroutine is used to predict the deviation from the desired straight line path that may be generated from the linear interpolation of joint space. A microprocessor is used to generate and to execute the linear interpolation subroutine which performs an open loop control of six stepping motors. An experimental technique has also been developed to verify the simulation subroutine and to examine the actual deviation that may be generated due to mechanical vibration and/or friction during motion execution.

24368 **Projection pursuit density estimation.** Friedman, J.H.; Stuetzle, W.; Schroeder, A. (Stanford Univ., CA). *Journal of the American Statistical Association;* **79**: No. 387, 599-608(Sep 1984). Contract AC03-76SF00515;AT03-81ER10843.

The projection pursuit methodology is applied to the multivariate density estimation problem. The resulting non-parametric procedure is often less biased than the kernal and near-neighbor methods. In addition, graphical information is produced that can be used to help gain geometric insight into the multivariate data distribution. 13 references, 6 figures, 2 tables.

24369 **Squeezing the most out of an algorithm in CRAY FORTRAN.** Dongarra, J.J.; Eisenstat, S.C. (Argonne National Lab., IL). *ACM Transactions on Mathematical Software;* **10**: No. 3, 219-230(Sep 1984). Contract W-31-109-ENG-38.

This paper describes a technique for achieving supervector performance on a CRAY-1 in a purely FORTRAN environment. The technique can be applied to a wide variety of algorithms in linear algebra, and is beneficial in other architectural settings. 6 references, 4 tables.

24370 **Interesting property of the sample mean under a first-order autoregressive model.** Morris, M.D.; Ebey, S.F. (Oak Ridge National Lab., TN). *American Statistician;* **38**: No. 2, 127-129(May 1984). Contract W-7405-ENG-26.

The unweighted sample mean is examined as an estimator of the population mean in a first-order autoregressive model. It is demonstrated that the precision of this estimator deteriorates as the number of equally spaced observations taken within a fixed time interval increases. 2 references, 2 tables.

24371 **Oscillation of linear second-order differential systems.** Kwong, M.K.; Kaper, H.G.; Akiyama, K.; Mingarelli, A.B. (Northern Illinois Univ., Dekalb). *Proceedings of the American Mathematical Society;* **91**: No. 1, 85-91(May 1984). Contract W-31-109-ENG-38.

This article is concerned with the oscillatory behavior at infinity of the solution y:[a, ∞) → R/sup n/ of a system of second-order differential equations, y″(t) + Q(t)y(t) = 0, t epsilon [a, ∞); Q is a continuous matrix-valued function on [a, ∞) whose values are real symmetric matrices of order n; it is assumed that the largest eigenvalue of the matrix integral/sub a//sup t/Q(s)ds tends to infinity as t → ∞. Various sufficient conditions are given which guarantee oscillatory behavior at infinity; these conditions generalize those of Mingarelli. 10 references.

24372 **(LA-tr—87-7) Development and performance evaluation of a finite element simulator using parallel processing array (PPA).** Doi, Shun. Translated from *Transactions of the Information Processing Society of Japan ;* **25**: No. 3, 379-387(1984). Contract W-7405-ENG-36. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006227.

This article introduces the primary concepts, and discusses the performance evaluation of a finite element simulator which has been developed for increased speed in the high speed solution of partial differential equations, and which is based on a parallel processor array (PPA) consisting of a one-dimensional array comprised of 34 miniprocessors. The object of this simulator is a heat transfer system, but the data entered into this system is essentially no different from the data entered into a conventional finite element solution system, and the user is not required to be absolutely conscious of the parallel computations. In the performance evaluation, it is shown that computation speed was increased, the speed of computation by this simulator being nearly proportionate to the number of processors used, and that computation time was increased only proportionate to the number of nodes as long as there was a sufficient number of processors. Furthermore, through comparison to simulations by a general purpose, large scale computer (HITAC-M-200) through several computation methods using its internal array processor (IAP), it was shown that this simulator was by no means inferior from the point of computation speed, and that it was in fact a great deal superior in performance cost comparisons. Finally, to what extent the number of processors could be practically increased with respect to the scale of the finite element model when expanding the PPA in the emphasis of finite element simulation was considered. Those results made it clear that the number of processors could be increased up to about 400 when handling problems involving up to approximately 20,000 node points, and that it was possible to attain the amount of memory in the data range required by each of those processors in this case with microprocessors which are currently on the market.

24373 **Dynamically partitionable multicomputers with switchable memory.** Su, S.Y.W.; Baru, C.K. (Univ. of Florida, Gainesville). *Journal of Parallel and Distributed Computing;* **1**: 152-184(1984). Contract FG05-84ER13285.

From IEEE international conference on data engineering; Los Angeles, CA, USA (24-27 Apr 1984).

This paper presents an analysis and evaluation of a multicomputer system called SM3 which has a number of special architectural features, viz.: (1) a number of independent computer systems interconnected by a physically partitionable bus which allows the system to be dynamically reconfigured into a number of clusters (or subnetworks) of adjacent computers to achieve a high degree of parallel, MIMD processing; (2) a set of dual switchable main memory modules used to facilitate fast data/command/message transfers among the computers; and (3) a number of special-purpose control lines for efficient interprocessor control, communication, and synchronization. Three representative database algorithms are described and modeled analytically by a set of timing equations and the results of a performance evaluation study are presented. The performance of the SM3 architecture is compared with that of several existing architectures. It is found that SM3 has an excellent overall performance for various categories of database operations and that its architecture is flexible for adapting different software algorithms. 38 references, 5 figures, 3 tables.

24374 **Graph-theoretic measures of multivariate association and prediction.** Friedman, J.H.; Rafsky, L.C. (Stanford Univ., CA). *Annals of Statistics;* **11**: No. 2, 377-391(1983). Contract AC03-76SF00515.

Interpoint-distance-based graphs can be used to define measures of association that extend Kendall's notion of a generalized correlation coefficient. The authors present particular statistics that provide distribution-free tests of independence sensitive to alternatives involving non-monotonic relationships. Moreover, since ordering plays no essential role, the ideas that fully applicable in a multivariate setting. The authors also define an asymmetric coefficient measuring the extent to which (a vector) X can be used to make single-valued predictions of (a vector) Y. The authors discuss various techniques for proving that such statistics are asymptotically normal. As an example of the effectiveness of their approach, the authors present an application to the examination of residuals from multiple regression. 18 references, 2 figures, 1 table.

24375 **Derivative calculation from finite element solutions.** Carey, G.F. (Univ. of Texas, Austin). *Computer Methods in Applied Mechanics and Engineering;* **35**: 1-14(1982). Contract AS05-81ER10954.

A technique is considered whereby very accurate derivatives of a finite element solution can be calculated efficiently. It is demonstrated here that most of the necessary quantities for this subsidiary computation are available as computed by-products in the preceding finite element solution procedure. The calculation is shown in this note to be a particular form of a procedure for which superconvergent theoretical error estimates have been proven elsewhere. Numerical experiments confirm the superior accuracy in the computed derivative (stress or flux). 9 references, 5 figures, 8 tables.

24376 (CONF-870538—3) A disaster in retrospect: Hope for the future?. Kenski, D.M. (Argonne National Lab., IL (USA)). Nov 1986. Contract W-31109-ENG-38. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87004966.

From 34. international technical communication conference; Denver, CO, USA (10 May 1987).

This paper describes a recent editorial disaster that befell our staff, the steps we took to cope, and the lessons we learned. A complex, poorly written report was submitted for editing and production on a tight schedule. The authors, who were new to the department's publishing process, were unusually hostile to the editing function. Despite calling in managers, holding meetings of all involved, and patiently explaining editorial policy and principles, the report became mired in endless rounds of author-editor negotiations and ended up being published 3 months late. Some important lessons we learned: introduce new authors to the editorial process with special care; always develop written schedules; document your time; bring in management at whatever level is necessary. Even if you do your best, it may occasionally be necessary to lower your standards, get a nasty job done as quickly as possible, and move on to more profitable tasks. Remember that the burden of technical correctness lies with the author - the editor's job is to point out errors and suggest corrections; the author must in the end decide whether to accept those corrections.

24377 (DOE/ER/25026—1) Differential-algebraic equation index transformations. Gear, C.W. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Dec 1986. Contract FG02-87ER25026. 19p. (UIUCDCS-R—86-1314; UILU-ENG—86-1780; CONF-870726—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87005543.

From 1. international conference on industrial and applied mathematics; Paris, France (1 Jul 1987).

Techniques are discussed for the reduction of higher index problems of general differential-algebraic equations by differentiation to lower index ones that can be solved numerically while not introducing any constants of integration. Furthermore, we will give transformations between general DAEs and ones in semi-explicit form, and, by these techniques, show how a problem can be reduced to an index 1 semi-explicit form that can be reduced to an implicit differential equation from whose solution the solution to the original problem can be retrieved by at most a differentiation and a linear transformation. 9 refs.

24378 (INIS-mf—10347) Karlsruhe Nuclear Research Centre. Report on the results of research and development 1985. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.)). 15 May 1986. 484p. (In German). NTIS (US Sales Only), PC A21/MF A01. File Number DE87751343.

The report contains a description of the research projects, a list of the institutes and departments of the scientific-technical range with short articles concerning the results of the institutional work, and a bibliography of all publications of 1985. The main aspects of the projects and research programs are fast breeder, separation nozzle process, nuclear fusion, waste recycling and reprocessing, final storage, nuclear safety, the range of technique-man-environment, solid state and materials research, nuclear and elementary particle physics, and research programs of different institutes.

24379 (INIS-mf—10535) Subject directed project catalogues. A catalyst in Nordic cooperation?. Bonnevie-Svendsen, M. (Nordisk Kontaktorgan for Atomenergispoergsmaal, Risoe (Denmark)). Feb 1986. 35p. (In Norwegian). NTIS (US Sales Only), PC A03/MF A01. File Number DE87750686.

In a Nordic project an attempt has been made to establish a Nordic catalogue for ongoing projects in the radioactive waste field. To evaluate the practical implications of such a catalogue, a speciem copy containing about 150 projects has been issued. On the basis of a positive response from users, guidelines for annual publication were drawn up, but no decision has been made with regards to further editions. Suggestions for a future coordination with IAEA/WMRA have been outlined.

24380 (LBL—21747) Physical design of temporal databases. Rotem, D.; Segev, A. (Lawrence Berkeley Lab., CA (USA)). Jun 1986. Contract AC03-76SF00098. 22p. (CONF-870261—1). NTIS, PC A02. File Number DE87006146.

From 3. international conference on data engineering; Los Angeles, CA, USA (2 Feb 1987).

We propose a partitioning scheme of files in a temporal database system, and develop algorithms to minimize the overflow associated with that scheme. The proposed partitioning is suitable for range queries and aggregation operations along the time dimension. Simulation results show that the partitioning algorithms proposed in this paper result in better performance than in the case of a grid-type partitioning. 18 refs., 6 figs., 2 tabs.

24381 (LBL—22848) Batched interpolation searching on databases. Li, Jian-zhong; Wong, H.K.T. (Lawrence Berkeley Lab., CA (USA)). Feb 1987. Contract AC03-76SF00098. 16p. (CONF-870261—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006932.

From 3. international conference on data engineering; Los Angeles, CA, USA (2 Feb 1987).

This paper examines the effect of batching search requests in the Interpolation Search Algorithm on ordered tables in main-memory as well as in a more typical database environment, i.e., a blocked secondary memory. Experiments are performed on several hybrid interpolation search algorithms over non-uniformly distributed data. The effect of batching on these algorithms is examined in terms of algorithms, analysis and experiments. Algorithms, analytic expressions and experimental results of these extensions are given and described. Analytic expressions of these algorithms are validated by experiments. 16 refs., 7 figs.

24382 (UCRL—96032) Livermore risk analysis methodology: A structured decision analytic tool for information systems risk management. Guarro, S.B. (Lawrence Livermore National Lab., CA (USA)). 16 Jan 1987. Contract W-7405-ENG-48. 20p. (CONF-8611117—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87006825.

From Annual meeting of the Society for Risk Analysis; Boston, MA, USA (9 Nov 1986).

Reflections on information security risk analysis and a description of the basic features of LRAM, a specific risk analysis methodology developed at the Lawrence Livermore National Laboratory are discussed.

24383 (INIS-mf—10588) Act on state surveillance over nuclear safety of nuclear facilities and related regulations. Kyncl, J. (ed.). (Ceskoslovenska Komise pro Atomovou Energii, Prague). Mar 1986. 80p. (In Czech). NTIS (US Sales Only), PC A05/MF A01. File Number DE87701625.

The full text is given of Act of Law No. 28/1984 Coll. of Laws concerning State Surveillance over Nuclear Safety of Nuclear Facilities, an excerpt from Act of Law No. 115/1983 Coll. of Laws which amends Act of Law No. 133/1970 Coll. of Laws on the competence of federal minstries, excerpt from Act of Law No. 50/1976 Coll. of Laws concerning regional planning and the building law, excerpts from Notice No. 85/ 1976 Coll. of Laws on the detailed arrangement of regional proceedings and the building law,

excerpts from Notice No. 83/1976 Coll. of Laws on general technical requirements for the construction, excerpts from Notice No. 105/1981 Coll. of Laws on the documentation of structures, Decree No. 2/1978 concerning nuclear safety assurance in the design, licensing and implementation of structures with nuclear power equipment, Decree No. 4/1979 concerning general criteria of nuclear safety provision in siting structures with nuclear power equipment, Decree No. 5/1979 concerning quality assurance of selected nuclear power installations, Decree No. 6/1980 on nuclear safety assurance in the start-up and operation of nuclear power installations, Instruction of the Czechoslovak Atomic Energy Commission No. 1/1985 determining the manner, time-limits and conditions of certifying the qualifications of selected personnel including the issuance and withdrawal of such certification, Decree No. 9/1985 on assuring nuclear safety of research nuclear installations and Notice No. 28/1977 Coll. of Laws on nuclear materials accounting and control. (J.B.).

24384 **(SIS—1986:6) Nuclear emergency planning in Norway.** Baarli, J. (Statens Inst. for Straalehygiene, Oslo (Norway)). 1986. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87750694.

The report describes the nuclear emergency plans before the Chernobyl accident. Revised plans are now being prepared.

The nuclear emergency planning in Norway is forming a part of the Search and Rescue Service of the country. Due to the fact that Norway do not have any nucleat power reactor, the nuclear emergency planning has not been given high priority. The problems however are a part of the activity of the National Institute of Radiation Hygiene, and the emergency preparedness is at the present time to a large extent based on the availability of professional health physicists and their knowledge, rather than established practices.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Sixth Czechoslovak biophysical congress with international participation. Abstracts of papers, 12:23640 (R;CS)
Ceskoslovenska Vedeckotechnicka Spolecnost, Prague
Mining Pribram in science and technology. Modern methods of analytical process testing, 12:23011 (R;CS;In Czech)
Chicago Univ., IL (USA)
Supermanifolds and super Riemann surfaces, 12:23914 (R;US)
CH2M Hill, Boise, ID (USA)
City of Heyburn conservation plan, 12:22798 (R;US)
CH2M Hill California, Inc., Emeryville (USA)
Hazardous waste site assessment: Inactive landfill, Site 300, Lawrence Livermore National Laboratory, 12:23493 (R;US)
Christensen (Laurits R.) Associates, Inc., Madison, WI (USA)
Residential response to time-of-use rates: Volume 4, Assessing RETOU's out-of-sample performance: Final report, 12:22439 (R;US)
Cincinnati Univ., OH (USA)
Geotechnical analysis for review of dike stability (GARDS). Technical manual. Final report, October 1985-September 1986, 12:23518 (R;US)
City Coll., New York (USA)
Pretreatment techniques for coal gasification. Eighth quarterly report, July 1-September 30, 1986, 12:22128 (R;US)
Pretreatment techniques for coal gasification. Fifth quarterly report, October 1-December 31, 1985, 12:22126 (R;US)
Pretreatment techniques for coal gasification. Sixth quarterly report, January 1-March 31, 1986, 12:22127 (R;US)
Techniques for coal gasification: Final report, 12:22129 (R;US)
City Coll., New York (USA). Dept. of Biology
Population genetics of microalgae, 12:22372 (BA;DE)
Clemson Univ., SC (USA). Dept. of Environmental Systems Engineering
Analysis of the validity of analytical models used for assessment of forty-five waste site areas: Subsurface flow and chemical transport, 12:23474 (R;US)
Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire
Baryonic decay of the J/psi and gluon spin, 12:23840 (R;FR;In French)
Coal Tech Corp., Merion, PA (USA)
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Coast Guard, Washington, DC (USA)
Evaluation of the performance of one-way valves used in chemical-protective suits, 12:23204 (R;US)
College of William and Mary, Williamsburg, VA (USA)
Sites and diffusion for muons and hydrogen in titanium hydrides, 12:22922 (R;US)
Colorado School of Mines, Golden (USA). Dept. of Physics
Colorado School of Mines fusion gamma ray project: Annual progress report, 12:24194 (R;US)
Colorado State Univ., Fort Collins (USA). Dept. of Civil Engineering
Reliability-based design of transmission line structures: Volume 2, Appendixes: Final report, 12:22438 (R;US)
Colorado Univ., Boulder (USA)
Global distribution of total cloud cover and cloud type amounts over land, 12:23412 (R;US)

Combustion Engineering, Inc., Windsor, CT (USA)
Boiler design criteria for dry sorbent SO_2 control with low-NOx burners: new unit applications. Final report, October 1985-March 1986, 12:22435 (R;US)
Combustion Engineering, Inc., Windsor, CT (USA). Power Systems Div.
Evaluation of the PM burner: A low-NO/sub x/ pulverized-coal-firing system for tangentially fired utility boilers: Final report, 12:22417 (R;US)
Commission of the European Communities, Luxembourg
Assessment of carbon steel overpacks for radioactive waste disposal, 12:22290 (R;FR)
Construction of an underground facility for "in-situ" experimentation in the boom clay, 12:22276 (R;FR)
Corrosion behaviour of container materials for geological disposal of high-level waste. Annual progress report 1984, 12:22286 (R;FR)
Corrosion behaviour of container materials for the disposal of high-level wastes in rock salt formations. Activity report 1983-1984, 12:22288 (R;FR)
Coupling of transport and geochemical models, 12:22282 (R;FR)
Deep fracturing of granite bodies. Literature survey, geostructural and geostatistic investigations, 12:22285 (R;FR;In French)
Determination of geochemical characters of insterstitial waters of pleistocene Italian clay formations, 12:23527 (R;FR;In Italian)
Development of a geophysical methodology from boreholes for the study of radioactive waste repositories in granite formations, 12:22278 (R;FR;In French)
Development of computer codes to perform model calculations for thermomechanical interaction of rock salt with borehole liners in a HLW repository, 12:22284 (R;FR;In German)
Effects of natural heating on a clay formation, 12:22279 (R;FR;In Italian)
Geoprospective study of a nuclear waste repository. Climatology: climatic changes and glaciations, 12:22264 (R;FR;In French)
Geoprospective study of a nuclear waste repository: salt domes; bibliographic study of their genesis, 12:22267 (R;FR;In French)
Geoprospective study of a nuclear waste repository. Vertical crustal movements: causes and quantification, 12:22268 (R;FR;In French)
Geoprospective study of a nuclear waste repository taking seismic activity into account, 12:22269 (R;FR;In French)
Geoprospective study of a nuclear waste repository. Prospective tectonics: convergent and divergent episodes, evolution of stress during the next 100,000 years, 12:22270 (R;FR;In French)
Geoprospective study of a nuclear waste repository. Time dependence of permeability changes, 12:22271 (R;FR;In French)
Geoprospective study of a nuclear waste repository: simulation of the evolution of a disposal site using a computer code named CASTOR, 12:22272 (R;FR;In French)
Geoprospective study of a nuclear waste repository: volcanic activity, 12:22266 (R;FR;In French)
Geoprospective study of a nuclear waste repository. Process of erosion and denudation, 12:22265 (R;FR;In French)
Influence of fluid-rock interaction on the rheology of salt rock, 12:22287 (R;FR)
Investigations on the populations of introduced and resident micro-organisms in deep repositories and their effects on containment of radioactive wastes, 12:22289 (R;FR)
Mathematical modelling of fracture hydrology, 12:22280 (R;FR)
Mirage project. Second summary progress report (Work period January to December 1984), 12:22275 (R;FR)
Proceedings of the 1984 International Conference on plasma physics, 12:24214 (R;FR)
Proceedings of the 1984 international conference on plasma physics, 12:24220 (R;FR)
Proceedings of the 5. symposium on neutron dosimetry beam dosimetry, 12:23315 (R;FR)
Proceedings of the 5. Symposium on neutron dosimtery radiation protection aspects, 12:23289 (R;FR)
Report on intercomparison studies of computer programs which respectively model: I) radionuclide migration II) equilibrium chemistry of groundwater, 12:22283 (R;FR)
Scale effect experiment in a fractured rock mass. Pilot study in the certified Fanay-Augeres mine (F), 12:22273 (R;FR;In French)
Scale effect experiment in a fractured rock mass. Pilot study in the certified Fanay-Augeres mine (F), 12:22274 (R;FR;In French)
Study of the coupling of geochemical models based on thermodynamic equilibrium with transfer models of components in solutions through porous or fissured media, 12:22281 (R;FR;In French)
Thermal behaviour of clay formations, 12:22277 (R;FR;In Italian)
COMSIS Corp., Wheaton, MD (USA). Professional Services Div.
Diesel market penetration study, 12:22800 (R;US)
Cooper Union Research Foundation, New York (USA)
A comprehensive study on the feasibility of energy recovery from sewage sludge: Final report, 12:23492 (R;US)
Cornell Univ., Ithaca, NY (USA)
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
Council for Mineral Technology, Randburg (South Africa)
Effect of particle size and colloid stability on the wet high-intensity magnetic separation of uranium from cyanidation residues, 12:22238 (R;ZA)
Council on Environmental Quality, Washington, DC (USA)
Report on long-term environmental research and development: [Final report], 12:22664 (R;US)
Cummins and Barnard, Inc., Ann Arbor, MI (USA)
Assessment of district heating/cooling potential in Marquette, Michigan: Final report, 12:22794 (R;US)

Investigation of the ion-optical properties of the magnetic spectrometer LEPS, 12:23364 (R;DE;In German)
Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Abt. Sicherheit und Strahlenschutz

Climatic values measured at the meteorological station of the Kernforschungsanlage Juelich from 1961 to 1985, 12:23415 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Angewandte Physikalische Chemie

Instrumental neutron activation analysis of site-dependent uptake and distribution of trace elements in the saltmarsh plant Aster tripolium from marsh fields in the Schelde estuary, Netherlands, 12:23073 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik

Calculation of the binding energy per nucleon and the quasi-particle interation in nuclear matter under consideration of relativistic medium effects, 12:24034 (R;DE;In German)
Nuclear structure and reaction mechanisms studied on alpha-particle transitions, 12:24032 (R;DE;In German)
Study of the (/sup 3/He,t) reaction and the (p,n) reaction at intermediate energies, 12:24035 (R;DE;In German)
Subbarrier fusion and the quantized adiabatic time-dependent Hartree-Fock theory, 12:24033 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Nukleare Sicherheitsforschung

Kinetics of the graphite/oxygen reaction in the in-pore diffusion controlled regime. Pt. 2. Graphites V483T, ASR-1RS, ASR-1RG and ATR-2E, 12:22951 (R;DE;In German)
Phenomena in the reactor protection building of a medium-sized high temperature reactor during a core heat-up accident with emphasis on the formation of gas layering, 12:22465 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik

Characteristics of a high current ion source operated with lithium, 12:23279 (R;DE)
Determination of the entrance rate and release rate constants and of the diffusion rate constants of hydrogen and deuterium for Inconel 600, by means of permeation measurements and the observation of recycling in the tokamak TEXTOR, 12:24293 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorbauelemente

Flow and heat-transfer at the intake of a radially symmetrical longitudinal flow heat exchanger, 12:23223 (R;DE;In German)
Use of the Laser-Doppler-Anemometry for the measurement of velocity distributions at the intake of a longitudinal flow heat exchanger, 12:23224 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung

Mechanism of hydrogen-permeation through oxidized metals, 12:22846 (R;DE;In German)
New experimental facility for the investigation of hydrogen isotopes permeation through heat exchanger tubes with sweep gas intermediate circuit under nuclear conditions, 12:22466 (R;DE;In German)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorwerkstoffe

Determination of gas-solid reaction kinetics in flowing dilute carrier gases using gas phase measurements, 12:22845 (R;DE;In German)
Fracture criterion for brittle materials based on statistical cells of finite volume, 12:22952 (R;DE)
Thermal shock testing of ceramics with pulsed laser irradiation, 12:24294 (R;DE)

Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Programmgruppe Technik und Gesellschaft

Energy in focus. An intermediate balance of the energy debate, 12:22657 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.)

Karlsruhe Nuclear Research Centre. Report on the results of research and development 1985, 12:24378 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Hauptabteilung Datenverarbeitung und Instrumentierung

Data acquisition and processing for testing of superconducting coils, 12:24295 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik

Investigation of the ion-optical properties of the magnetic spectrometer LEPS, 12:23364 (R;DE;In German)
Investigations of nuclear projectile break-up reactions. A laboratory approach of nuclear astrophysics, 12:23946 (R;DE)
Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)
Performance test of a TMS calorimeter, 12:23365 (R;DE;In German)
Polarization of solid deuterium-tritium fuel for nuclear fusion, 12:24296 (R;DE)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Material- und Festkoerperforschung

Creep tests in base material and welded specimens of X6CrNi 1811 (DIN 1.4948) steel in the frame of AUSOL-program. 1. interim report (September 1986), 12:22853 (R;DE;In German)
Cyclic thermal loading of a Bree plate under constant tension, 12:22492 (R;DE;In German)

Heavy ion irradiation with 200 keV Ni-ions to study the swelling of iron and nickel and the technical alloys, 12:22847 (R;DE;In German)
Investigations of the influence of nitrogen and niobium on the tensile and creep-rupture behaviour of an austenitic 18/14 CrNi-steel. Final report, 12:22848 (R;DE;In German)
Thermal and mechanical behavior of APWR-claddings under critical heat flux conditions, 12:22458 (R;DE;In German)
Thermophysical properties in the system Li-Pb, 12:22849 (R;DE)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik
Computational methods of the Advanced Fluid Dynamics Model, 12:22558 (R;US)
Parametric thermohydraulic calculations for advanced pressurized water reactors with the code HADA-2, 12:22457 (R;DE)
TPTRIA - a computer program for the reactivity and kinetic parameters for two-dimensional triangular geometry by transport perturbation theory, 12:22484 (R;DE)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorbauelemente
Thermal and mechanical behavior of APWR-claddings under critical heat flux conditions, 12:22458 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung
Consulting core surveillance system COCOSS I at KNK II, 12:22471 (R;DE)
Dynamic tensile tests with superimposed ultrasonic oscillations applied to stainless steel, 12:22470 (R;DE;In German)
Numerical simulation of multiphase-multicomponent-flow after fuel rod failure in a sodium filled coolant channel, 12:22469 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Nukleare Sicherheit
Thermal and mechanical behavior of APWR-claddings under critical heat flux conditions, 12:22458 (R;DE;In German)

Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Schneller Brueter
Consulting core surveillance system COCOSS I at KNK II, 12:22471 (R;DE)
Dynamic tensile tests with superimposed ultrasonic oscillations applied to stainless steel, 12:22470 (R;DE;In German)
Heavy ion irradiation with 200 keV Ni-ions to study the swelling of iron and nickel and the technical alloys, 12:22847 (R;DE;In German)
Numerical simulation of multiphase-multicomponent-flow after fuel rod failure in a sodium filled coolant channel, 12:22469 (R;DE;In German)
TPTRIA - a computer program for the reactivity and kinetic parameters for two-dimensional triangular geometry by transport perturbation theory, 12:22484 (R;DE)

Kernkraftwerk Lingen G.m.b.H., Darme/Lingen (Germany, F.R.)
Lingen Nuclear Power Plant. Annual report 1985, 12:22443 (R;DE;In German)

Kingston, Reynolds, Thom and Allardice Ltd., Auckland (New Zealand)
Transportation of lignite to the North Island. Technical and economic evaluation of options. Summary report, 12:22166 (R;US)

KMI, Inc., Albuquerque, NM (USA)
Extrinsic gettering for VLSI/ULSI processes, 12:23244 (R;US)

KMS Fusion, Inc., Ann Arbor, MI (USA)
X-ray flash crystallography to study directed energy transfer in materials. Technical report, 9 July 1985-9 May 1986, 12:24097 (R;US)

Koeln Univ. (Germany, F.R.)
Instrumental neutron activation analysis of site-dependent uptake and distribution of trace elements in the saltmarsh plant Aster tripolium from marsh fields in the Schelde estuary, Netherlands, 12:23073 (R;DE;In German)

Koeln Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet
Nuclear structure studies on /sup 178/Hf by means of neutron induced gamma and electron spectroscopy, 12:23972 (R;DE;In German)

Komenskeho Univ., Bratislava (Czechoslovakia)
Separation of ionic solutes. Abstracts of papers, 12:23021 (R;CS;In English and Russian)

Kraftwerk Union A.G., Erlangen (Germany, F.R.)
Characterization of spent fuel for disposal without reprocessing. Final report, 12:22292 (R;DE;In German)
Further development of KAVERN and code development on gas generation from the containment basement during concrete decomposition, 12:22522 (R;DE;In German)

A review of national and international activities on modeling the effects of increased CO_2 concentrations on the simulation of regional crop production: (A report on linkage between climate and crop models): Progress report, 12:23428 (R;US)
Missouri Univ., Rolla (USA)
Transfer ionization in 0.5-1.5 MeV/u O^{6-8+} + He collisions, 12:23795 (R;US)
Missouri Univ., Rolla (USA). Dept. of Physics
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)
Mitsubishi Cable Industries Ltd., Tokyo (Japan)
Development of extruded and molded straight joint for ultra high-voltage XLPE cable, 12:22440 (R;US)
Mitsubishi Electric Corp., Tokyo (Japan)
AlGaAs laser diodes grown by MOCVD, 12:22954 (R;JP)
AlGaAs laser diodes grown by molecular-beam epitaxy, 12:22955 (R;US)
Mitsubishi Heavy Industries Ltd., Tokyo (Japan)
Calculation of 2-dimensional unsteady flow in inlet pipes and its application for V-8 engines, 12:22802 (R;JP)
Development of synthetic gasoline production process, 12:22686 (R;JP)

Evaluation of the PM burner: A low-NO/sub x/ pulverized-coal-firing system for tangentially fired utility boilers: Final report, 12:22417 (R;US)
New combustion system of the IDI (indirect injection) diesel engine, 12:22803 (R;US)
Study on piston slap-induced noise and vibration of internal combustion engine - theoretical analysis and simulation, 12:22804 (R;JP)

Montana State Univ., Bozeman (USA)
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)

Morgan State Univ., Baltimore, MD (USA). Center for Transportation Studies
Personal, social, psychological, and other factors in ridesharing programs. Final report, September 1982-January 1984, 12:22778 (R;US)

Muenchen Univ. (Germany, F.R.). Fakultaet fuer Physik
Hadrons in two-dimensional quantum chromodynamics: Construction and study of bound states by means of perturbative and non-perturbative methods, 12:23863 (R;DE;In German)

N

Nagoya Univ. (Japan). Inst. of Plasma Physics
Active diagnostics of magnetically confined alpha particles by pellet injection, 12:24251 (R;JP)

Nanjing Univ., JS (China). Center for Materials Analysis
The Center for Materials Analysis: An important step to expedite materials research at Nanjing University, 12:22986 (R;US)

National Aeronautics and Space Administration, Cleveland, OH (USA). Lewis Research Center
Overview of free-piston Stirling engine technology for space power application, 12:22477 (R;US)
Preliminary study of niobium alloy contamination by transport through helium, 12:22829 (R;US)
RE-1000 free-piston Stirling engine sensitivity test results, 12:22806 (R;US)

National Board for Spent Nuclear Fuel, Stockholm (Sweden)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Comparison of spent fuel management options, policies and regulations and applicability to Sweden , 12:22248 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. National policies and regulations, 12:22249 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Description of spent fuel management activities in each country and applicable laws and regulations , 12:22684 (R;SE)

National Bureau of Standards, Washington, DC (USA)
Materials Information for Science and Technology (MIST): · Project overview: Phase 1 and 2 and general considerations, 12:22818 (R;US)

National Bureau of Standards, Washington, DC (USA). Inst. for Materials Science and Engineering
Evaluation and compilation of DOE waste package test data: Biannual report, December 1985-July 1986, 12:22303 (R;US)

National Center for Atmospheric Research, Boulder, CO (USA)
Global distribution of total cloud cover and cloud type amounts over land, 12:23412 (R;US)
White light solar corona: an atlas of 1985 K- coronameter synoptic charts, December 1984-December 1985. Technical note, 12:23766 (R;US)

National Committee for Rock Mechanics, Washington, DC (USA). Panel on Science and Engineering of Rock Mechanics
Annual review of US progress in rock mechanics: Rock dynamics, 12:23736 (R;US)

National Congress of American Indians, Washington, DC (USA)
[National Congress of American Indians]: Final 1985-1986 progress report, March 1, 1986-October 7, 1986, 12:22263 (R;US)

National Council on Radiation Protection and Measurements, Bethesda, MD (USA)
[Development of recommendation for protection against radiation emitted by internally deposited radionuclides]: Technical progress report, 1 March 1986 to 28 February 1987, 12:23628 (R;US)

Nationale Genossenschaft fuer die Lagerung Radioaktiver Abfaelle (NAGRA), Baden (Switzerland)
Concentration ratios for BIOPATH: selection of the soil-to-plant concentration ratio database, 12:23490 (R;CH)
Sondierbohrung Boettstein: Hydrogeological testing of crystalline rocks, 12:22299 (R;CH)

National Energy Information Center, Washington, DC (USA)
Energy information directory, January 1987, 12:22672 (R;US)

National Geophysical Data Center, Boulder, CO (USA)
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)

National Inst. for Petroleum and Energy Research, Bartlesville, OK (USA)
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)

National Inst. of Radiation Protection, Stockholm (Sweden)
Measurement of individual doses annual report 1985, 12:23670 (R;SE;In Swedish)

National Oceanic and Atmospheric Administration, Oak Ridge, TN (USA). Atmospheric Turbulence and Diffusion Lab.
User's guide for PEM-2: Pollution Episodic Model (version 2). Final report, 12:23433 (R;US)

National Research Centre for the Physical Sciences Democritos, Athens (Greece)
Car-borne and on foot scintillometer survey of the Aegean Sea Islands (Greece). Pt. A, 12:22230 (R;GR;In Greek)
Car-borne and on foot scintillometer survey of the Aegean Sea Islands (Greece). Pt. B, 12:22233 (R;GR;In Greek)
Car-borne scintillometer survey in Thessaly and Euboea Island, 12:22226 (R;GR;In Greek)
Emergency core cooling system for the Greek Research Reactor Democritus, 12:22513 (R;GR;In Greek)
Estimation of the consequences of the research reactor's hypothetical loss of coolant accident on the personnel of the Greek AEC, 12:22516 (R;GR;In Greek)
Geology and radiometry of West Macedonia (Greece), 12:22231 (R;GR;In Greek)
Investigation of the concentrations of radon-222 and its daughter products in Loutraki spas (Peloponnese, Greece), 12:23453 (R;GR;In Greek)
Isotope hydrology study of the Louros riverplain area, 12:23526 (R;GR;In Greek)
Optimal supervision and failure detection of dynamic technological systems, 12:22497 (R;GR;In Greek)
Report on the results from the 3rd phase geochemical stream sediment and water sampling in the Vathyrema area (Drama Dept.), 12:22228 (R;GR;In Greek)
Study on /sup 226/Ra concentrations in the CFP plant areas and on the radioactivity of lignites and cements containing fly ash, 12:23452 (R;GR;In Greek)
Uraniferous lignites and bituminous clays of the Serres Basin. Pt. A, 12:22227 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2623(I,IV)-2624-2723-2724 Thrace, 12:22229 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2623(II,III)-2622 Thrace, 12:22232 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2523-2522 Thrace, 12:22234 (R;GR;In Greek)

National Research Council, Washington, DC (USA)
Agenda for improved evaluation of supercomputer performance. Final report, 12:24346 (R;US)
Planning for energy conservation R and D: a review of the DOE's (Department of Energy's) planning process. Final report, 12:22705 (R;US)
National Research Council, Washington, DC (USA). Commission on Life Sciences
Fire and smoke: understanding the hazards. Final report, January 1985-August 1986, 12:23434 (R;US)
National Research Council, Washington, DC (USA). Transportation Research Board
Economic factors in the provision of transportation services, 12:22782 (R;US)
National Tsing Hua Univ., Hsinchu (Taiwan). Dept. of Nuclear Engineering
Fine-mesh limit of 1D nodal transport equations, 12:24051 (R;US)
Naval Academy, Annapolis, MD
Transition range drop tower J-R curve testing of A106 steel, 12:22858 (R;US)
Naval Civil Engineering Lab., Port Hueneme, CA (USA)
Fluidized-bed boiler assessment for Navy applications. Final report, October 1983-September 1985, 12:23247 (R;US)
Naval Postgraduate School, Monterey, CA (USA)
Experimental test of minority-carrier annealing on gallium arsenide solar cells using forward-biased current. Master's thesis, 12:22362 (R;US)
Preliminary development of a nuclear propulsion officer enlistment supply model. Master's thesis, 12:22674 (R;US)
Simple laser-driven, metal photocathodes as cold, high-current electron sources. Master's thesis, 12:23212 (R;US)
Naval Research Lab., Washington, DC (USA)
New version of the energy-deposition code D-DEP-1: better stopping powers. Final report, 12:24050 (R;US)
Nevada Univ., Reno (USA). Desert Research Inst.
Borehole sensing methods for ground-water investigations at hazardous-waste sites. Summary report, 12:23520 (R;US)
New Mexico Solar Energy Inst., Las Cruces (USA)
Reliability of intermediate sized photovoltaic systems, 12:22381 (R;US)
New Mexico State Univ., Las Cruces (USA). New Mexico Solar Energy Inst.
New Mexico passive solar home temperature survey: Final report, 12:22385 (R;US)
New Mexico State Univ., Las Cruces (USA). Physical Science Lab.
Experimental studies of a closed-loop sulfur oxide energy conversion and transport system, 12:22384 (R;US)
New York City Bureau of Science and Technology (USA). Environmental Protection Dept.
A comprehensive study on the feasibility of energy recovery from sewage sludge: Final report, 12:23492 (R;US)
New York State Energy Research and Development Authority, Albany (USA)
Controlling the effects of deteriorating fuel oil quality through oil-water emulsions: Final report, 12:22196 (R;US)
Utilization potential of coal combustion by-products: Somerset Power Plant case study: Final report, 12:22158 (R;US)
New Zealand Energy Research and Development Committee, Auckland
Legal nature of LPG (liquefied petroleum gas) regulation, 12:22191 (R;US)
Niels Bohr Inst., Copenhagen (Denmark)
Appearance of critical dimensions in regulated string theories. Pt. 2, 12:23921 (R;DK)
N=2 superconformal invariance in two-dimensional quantum field theories, 12:23911 (R;DK)
N=2 superconformal theories, 12:23912 (R;DK)
Non-perturbative study of regularized bosonic string amplitudes, 12:23922 (R;DK)
Random dynamics, 12:23923 (R;DK)
Static potential in a string model with extrinsic curvatures, 12:23887 (R;DK)
Nippon Steel Corp., Tokyo
Development of a high-strength high-manganese stainless steel for cryogenic use, 12:23201 (R;JP)
Development of 1.5Ni-CLC steel for LPG storage tanks, 12:22200 (R;JP)
Low-temperature service facilities and recent status of their materials and welding, 12:22213 (R;JP)
Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)
Configurational statistics of a polymer chain with random sequence of elements, 12:23813 (R;DK)
Current fluctuations in sliding charge density waves, 12:24115 (R;DK)
Effect of a convex boundary on a rarefied classical- or quantum gas. Flow past a stationary boundary and the effect of an oscillating boundary on the gas, 12:23225 (R;DK)
Mesons in the Eguchi Kawai model, 12:23924 (R;DK)
On the quantum mechanical theory of stress and force, 12:24178 (R;DK)
Pregeometric quantum lattice: A general discussion, 12:24179 (R;DK)
Quantal foundation of the nucleon exchange transport theory, 12:24040 (R;DK)
Skyrmions, dense matter and nuclear forces, 12:24039 (R;DK)
Technique for filling gaps in time series with complicated power spectra, 12:24343 (R;DK)
Nordisk Kontaktorgan for Atomenergispoergsmaal, Risoe (Denmark)
Human component in the safety of complex systems. Summary report of the NKA/LIT programme 1981-1985, 12:22498 (R;FI)
Materials resistant to seawater. Transfer of know-how from nuclear power plants to the offshore industry, 12:22837 (R;NO;In Norwegian)
Subject directed project catalogues. A catalyst in Nordic cooperation?, 12:24379 (R;NO;In Norwegian)
Towards more realistic assessment of reactor accident consequences. A Nordic project, 12:22500 (R;NO)
Norges Tekniske Hoegskole, Trondheim. Electronics Research Lab.
Documentation of computer programs for optimization and simulation of multicarrier SAW-based demodulator, 12:23243 (R;NO)
Norsk Inst. for Luftforskning, Kjeller
Air radioactivity at selected stations in Norway after the Chernobyl reactor accident, 12:22559 (R;NO)
North Carolina Agricultural and Technical State Univ., Greensboro (USA). Transportation Inst.
Total-factor productivity analysis of public transit, 12:22783 (R;US)
North Carolina State Univ., Raleigh (USA). Dept. of Physics
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)
North Dakota Univ., Grand Forks (USA). Dept. of Chemistry
Metal arene complexes in coal structure determination: Quarterly report for the period December 1986-February 1987, 12:22148 (R;US)
North Dakota Univ., Grand Forks (USA). Energy Research Center
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
Northern Michigan Univ., Marquette (USA)
Assessment of district heating/cooling potential in Marquette, Michigan: Final report, 12:22794 (R;US)
Northwestern Univ., Evanston, IL (USA). Dept. of Mechanical Engineering
Fine-mesh limit of 1D nodal transport equations, 12:24051 (R;US)
Notre Dame Univ., IN (USA). Dept. of Materials Science and Engineering
Characterization of rapidly solidified Al-Be-Li and Al-Be ribbons, 12:22821 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering Safety
Development of site specific response spectra, 12:22601 (R;US)
Transition range drop tower J-R curve testing of A106 steel, 12:22858 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Engineering Technology
Equipment qualification issues research and resolution: Status report, 12:22598 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of PWR Licensing-A
Progress reviews of six safety parameter display systems, 12:22600 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Regulatory Applications
Feasibility study on a data-based system for decisions regarding occupational radiation protection measures, 12:23649 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Safety Review and Oversight
Response of seismic category I tanks to earthquake excitation, 12:23200 (R;US)

Advanced thermochemical biomass gasification, 12:22356 (R;US)
Allochthonous detritus input to a small, cold desert spring-stream, 12:23507 (R;US)
Characteristics of beta detection and dose measurement at Department of Energy facilities, 12:23666 (R;US)
Comparison of alternatives for the treatment of non-fuel-bearing hardware, 12:22308 (R;US)
Electron transfer and radical-cation reactions of coal model compounds. Annual report, April 1985-March 1986, 12:22150 (R;US)
Energy and indoor air quality measurements from five energy conserving manufactured homes: Final report, 1987, 12:22707 (R;US)
Evaluation of wear rates and mechanisms of titanium diboride-graphite composite materials proposed for use as cathodes in Hall-Heroult cells, 12:22956 (R;US)
Feasibility study on a data-based system for decisions regarding occupational radiation protection measures, 12:23649 (R;US)
Ground-water monitoring and modeling at the Hanford Site, 12:23531 (R;US)
Hydrogen absorption and crevice corrosion behavior of Ti Grade 12 during exposure to irradiated brine at 150°C, 12:22860 (R;US)
In situ vitrification of transuranic wastes: An updated systems evaluation and applications assessment, 12:22307 (R;US)
Radiation exposures for DOE and DOE contractor employees Eighteenth annual report, 1985, 12:23627 (R;US)
Relationship of the new homes resource to Bonneville Power Administration's 1986 resource strategy, 12:22708 (R;US)
Residential indoor air pollutants, 12:23454 (R;US)
Status of phenomenological modeling, 12:23667 (R;US)
System cost-effectiveness for increasing cask shielding, 12:23202 (R;US)
The trade effects of energy use in the US economy: An input-output analysis, 12:22660 (R;US)
Pacific-Sierra Research Corp., Los Angeles, CA (USA)
Severity levels and symptoms complexes for acute radiation sickness -- description and quantification. Technical report, 6 January 1984-31 March 1985, 12:23626 (R;US)
Papadopulos (S.S.) and Associates, Inc., Rockville, MD (USA)
Analysis of the validity of analytical models used for assessment of forty-five waste site areas: Subsurface flow and chemical transport, 12:23474 (R;US)
Paris-1 Univ., 75 (France)
Beam response problem in the RFQ, 12:23276 (R;DE)
Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire
Search for single photons at PETRA, 12:23837 (R;FR)
Pennsylvania Dept. of Education, Harrisburg (USA)
Electrical energy: Policy and prospects: [Final report], 12:22690 (R;US)
Pennsylvania Dept. of Transportation, Harrisburg (USA). Bureau of Public Transit and Goods Movement Systems
Transit marketing in Pennsylvania: a handbook of effective transit-marketing aids (revised edition), 12:22781 (R;US)
Pennsylvania State Univ., McKeesport (USA)
Immobilized coal-like structures: Final report, August 8, 1985 to August 7, 1986, 12:22134 (R;US)
Pennsylvania State Univ., University Park (USA). Coal Research Section
Enhanced coal liquefaction by low-severity catalytic reactions: Technical progress report for the period December 1986 to February 1987, 12:22136 (R;US)
Pennsylvania State Univ., University Park (USA). Davey Lab.
Dynamics of cluster dissociation following multiphoton ionization, 12:23788 (R;US)

Pennsylvania State Univ., University Park (USA). Dept. of Physics
Electron transfer ionization and excitation in atomic collisions: Progress report, 12:23800 (R;US)

Pennsylvania State Univ., University Park (USA). Materials Research Lab.
Three-dimensional residual stress characterization of thick plate weldments with advanced measurement instrumentation and methodologies: Final technical report for period January 1984 to April 1986, 12:22859 (R;US)

Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Abt. Sicherstellung und Endlagerung Radioaktiver Abfaelle
Mathematical modelling of the thermal effects of radioactive wastes with low decay heat output on the host rock in the Konrad shaft, 12:22309 (R;DE;In German)

Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Forschungs- und Messreaktor
Covariance matrix of neutron spectra used in the REAL 84 exercise, 12:23368 (R;DE)

Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Neutronendosimetrie
Influence of neutron spectra and fluence response data on the determination of dose equivalent with Bonner spheres, 12:23369 (R;DE)

Pittsburgh Univ., PA (USA)
Chemical and bioassay characterizations of sludge and wastewater from fixed bed UNDERC coal gasification: Final report, 12:22154 (R;US)
Workshop report on new directions in x-ray scattering, 12:24143 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)

Pittsburgh Univ., PA (USA). Dept. of Physics and Astronomy
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)

Pittsburgh Univ., PA (USA). School of Engineering
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 6, December 1, 1986-February 28, 1987, 12:22086 (R;US)

Polytechnic Univ., Brooklyn, NY (USA). Polymer Research Inst.
The workshop on conductive polymers: Final report, 12:22943 (R;US)

Praxis Engineers, Inc., Milpitas, CA (USA)
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)

Princeton Univ., NJ (USA)
Development and applications of photosensitive device systems to studies of biological and organic materials: Progress report for period June 1964-December 1986, 12:22987 (R;US)

Princeton Univ., NJ (USA). Plasma Physics Lab.
Recent advances in the theory and modeling of rf heating in inhomogeneous plasmas, 12:24243 (R;US)

Purdue Univ., Lafayette, IN (USA). Dept. of Physics
Scaling laws for aberrations in magnetic quadrupole lens systems, 12:23270 (R;US)

R

Radian Corp., Austin, TX (USA)
Polychlorinated dibenzofurans (PCDF) and polychlorinated dibenzo-p-dioxins (PCDD) in utility transformers and capacitors: Volume 3, Final report, 12:23095 (R;US)

Radiation Effects Research Foundation, Hiroshima (Japan)
Life table analysis with small numbers of cases. An example; multiple myeloma in Hiroshima and Nagasaki, 12:23668 (R;JP;In Japanese and English)

Research Triangle Inst., Research Triangle Park, NC (USA)
Stability of parts-per-million organic cylinder gases and results of source test analysis audits: Status Report 8, 12:23440 (R;US)

Resources for the Future, Inc., Washington, DC (USA)
Transport energy: determinants and policy. Final report, 12:22777 (R;US)

Riley Stoker Corp., Worcester, MA (USA)
Prevention, detection, and control of coal pulverizer fires and explosions: Final report, 12:22418 (R;US)

Risoe National Lab., Roskilde (Denmark)
Assessment of radiographic image quality by visual examination of neutron radiographs of the calibration fuel pin, 12:23236 (R;DK)
Can neutron beam components and radiographic image quality be determined by the use of beam purity and sensitive indicators?, 12:23237 (R;DK)
Euratom neutron radiography working group, 12:23234 (R;DK)
Health Physics Department annual progress report 1 January-31 December 1985, 12:24314 (R;DK)
International neutron radiography newsletter, 12:23235 (R;DK)
Method for consequence calculations for severe accidents. Transient accident with safety valve at Ringhals 1, 12:23491 (R;DK;In Danish)
Methods to determine iodine plate-out, 12:22243 (R;DK)
On transport of helium grain boundaries during irradiation, 12:22864 (R;DK)
Reference neutron radiographs of nuclear reactor fuel, 12:23233 (R;DK)
Reliability calculations. Improvements of methods intended for calculation of reliability of structures and systems, 12:22603 (R;DK)
Symbiotic nitrogen fixation and nitrate uptake by the pea crop, 12:23625 (R;DK)

Rochester Univ., NY (USA). Lab. for Laser Energetics
Practical measurements of adhesion and strain for improved optical coatings, 12:23214 (R;US)

Rockefeller Univ., New York (USA)
Preliminary results from experiment UA6 on inclusive J/psi production in pp interactions at $\sqrt{s} = 24.3$ GeV, 12:23827 (R;US)

Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant
Computer-Aided-Instruction (user/CSO computer security training), 12:24347 (R;US)
Control systems development, research and development: Annual progress report, October 1983 through September 1984, 12:23203 (R;US)
Statistical applications at Rocky Flats, 12:24348 (R;US)

Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations
A comparative study of sensitivity coefficient calculation methods in groundwater flow, 12:23724 (R;US)
Comparison of calculated and observed hydrostatic pressure measurements at borehole DC-8, 12:23725 (R;US)
Development of equipment for stabilization and isolation of low-level liquid waste disposal cribs: A descriptive summary, 12:22310 (R;US)
Form and composition of secondary mineralization in fractures in Columbia River basalts, 12:23723 (R;US)
PUREX and UO_3 plant nitrogen oxide monitoring plan, 12:23443 (R;US)

Rogers and Associates Engineering Corp., Salt Lake City, UT (USA)
Analysis of the validity of analytical models used for assessment of forty-five waste site areas: Subsurface flow and chemical transport, 12:23474 (R;US)

Rollins Coll., Winter Park, FL (USA)
Electron-impact ionization data for the Fe isonuclear sequence, 12:23797 (R;US)

Rondout Associates, Inc., Stone Ridge, NY (USA)
Source depths utilizing broad-band data. Annual technical report, 11 April 1985-10 April 1986, 12:23405 (R;US)

Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research
Effects of pressure anisotropy on the M=1 small wavelenght modes in Z-pinches, 12:24257 (R;SE)
Hall effect upon small wavelength kink instabilities near an elliptic magnetic stagnation line, 12:24256 (R;SE)
Plasma stabilization and heating by induced currents along a poloidal magnetic field, 12:24258 (R;SE)

Royal Swedish Academy of Engineering Sciences, Stockholm
Radiation and health hazards. Chernobyl in perspective, 12:22553 (R;SE;In Swedish)

S

Saint Mary's Coll. of California, Moraga (USA). Dept. of Biology
The environmental fate of phosphates, chlorides, and organic residuals from combusted military smoke materials: Final report, 12:23445 (R;US)

San Carlos Univ. of Guatemala, Guatemala City
Sodium chloride purification, 12:23003 (R;GT;In Spanish)

San Carlos Univ. of Guatemala, Guatemala City. Facultad de Ciencias Quimicas y Farmacia
Detection of HBsAg and Anti HBc on donors of a blood bank by IRMA and ELISA methods, 12:23585 (R;GT;In Spanish)
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)

Sandia National Labs., Albuquerque, NM (USA)
A preliminary evaluation of the economic risk for cleanup of nuclear material licensee contamination incidents, 12:22304 (R;US)
A statistical study of the combined effects of substrate temperature, bias, annealing, and a Cr_3Si_2 undercoating on the tribological properties of rf-sputtered MoS_2 coatings, 12:22959 (R;US)
Advanced technology mobile robotics vehicle fleet, 12:22340 (R;US)
Aging studies of elastomers using a modulus profiling apparatus, 12:22961 (R;US)
An evaluation of the use of mercury porosimetry in calculating hydrologic properties of tuffs from Yucca Mountain, Nevada, 12:22311 (R;US)
An IGES electrical test: CADCAM-035, 12:24350 (R;US)
Atomistic calculation of stability and metastability of coherently strained silicon-like structures, 12:22957 (R;US)
Atomistic simulation of stability properties and growth of strained layer structures, 12:22958 (R;US)
Bandgap energy pressure coefficients in strained-layer structures, 12:22962 (R;US)
Central station photovoltaic array-field designs and design practices, 12:22383 (R;US)
Correlations between electrical contact resistance and stages of wear in 700 Torr helium for precious metal electrical contacts, 12:22866 (R;US)
Development of a holographic beamsplitter for use with a conventional Fresnel lens, 12:22371 (R;US)
Effect of the fast nuclear electromagnetic pulse on the electric power grid nationwide: A different view, 12:23400 (R;US)
Equipment qualification issues research and resolution: Status report, 12:22598 (R;US)
Experimental studies of a closed-loop sulfur oxide energy conversion and transport system, 12:22384 (R;US)
Extended steady-state analysis of the gamma-irradiated Cartesian P-N junction, 12:23384 (R;US)
Extrinsic gettering for VLSI/ULSI processes, 12:23244 (R;US)
Finite element simulation of penetration into geological targets, 12:23730 (R;US)
Growth and characterization of GaAs/AlAs superlattice alloys, 12:22960 (R;US)
Impact of a two-dimensional gas flow against an infinite wall, 12:23229 (TJ;US)
Kinetics of HCPB [bis-Hydroxycyclobutadiyne] diffusion in Sylgard, 12:23112 (R;US)
Materials Information for Science and Technology (MIST): Project overview: Phase 1 and 2 and general considerations, 12:22818 (R;US)
Molecular dynamics simulation of beam deposition of low-energy (10-100 eV) Si atoms on the Si(111) surface, 12:24116 (R;US)
Molecular-dynamics simulation of low-energy beam deposition of silicon, 12:24117 (R;US)
Photovoltaic system technology, 12:22382 (R;US)
Preliminary results of MUNDO high altitude pressure measurements, 12:23406 (R;US)
Progress on the Particle Beam Fusion Accelerator II for light ion fusion, 12:24300 (R;US)
Random functions and their small cycles, 12:24349 (R;US)
Reliability of intermediate sized photovoltaic systems, 12:22381 (R;US)
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
Subseabed Disposal Project thermal response studies: 1985 and 1986 annual report, October 1984 through September 1986, 12:22313 (R;US)
SWIFT [Sandia Waste Isolation Flow and Transport] II self-teaching curriculum: Illustrative problems for the Sandia Waste-Isolation Flow and Transport model for fractured media, 12:22327 (R;US)
Techniques for implementing statically complete component mode synthesis for forced response, 12:23189 (R;US)
TRANSNET: a user-accessible network of transportation analysis models, 12:22250 (R;US)
Tunnels at the silicon/tungsten interface: Causes and cures, 12:22867 (R;US)
Ventilation planning for a prospective nuclear waste repository, 12:22312 (R;US)
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)

Sandia National Labs., Albuquerque, NM (USA). International Safeguards
Surveillance Television and Recording System (STAR): Test, evaluation and implementation activities under POTAS [US Program for Technical Assistance to International Atomic Energy Agency Safeguards] Tasks E.25 and E.54: Final report, 12:22337 (R;US)

Thermacore, Inc., Lancaster, PA (USA)
Environmental control packages using below ambient-temperature thermal storage. Final report, 19 August 1985-28 February 1986 on Phase 1, 12:22614 (R;US)
TRC Environmental Consultants, Inc., East Hartford, CT (USA)
Comprehensive experimental design plan to relate pollutant sources to acidic deposition. Final report, 12:23439 (R;US)
Trend Response and Analysis Co., Inc., Alexandria, VA (USA)
An examination of models of issue development: Environmental scanning using on-line databases: Final report, 12:22694 (R;US)
Trondheim Univ. (Norway). Computing Centre
High parallelism and an effective reasoning procedure, 12:24345 (R;NO)
TRW Space and Technology Group, Redondo Beach, CA (USA)
Aqueous discharges from steam-electric power plants: Reference guide for monitoring six selected conventional and nonconventional pollutants: Final report, 12:23532 (R;US)
Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR)
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)
Peculiarities of the quark-gluon mechanism of the formation of C-even heavy quarkonia in hadron collisions, 12:23856 (R;SU)
Tuebingen Univ. (Germany, F.R.). Fakultaet fuer Physik
Real and imaginary part of the potential between two nuclei and the realistic nucleon-nucleon interaction, 12:23996 (R;DE;In German)

U

Ulster Univ., Coleraine (UK). Dept. of Physics
High charge state, ion-atom collision experiments using accel-decel, 12:23793 (R;US)
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)
UNC Nuclear Industries, Inc., Richland, WA (USA)
Environmental assessment of the F Area decommissioning program, Hanford site, Richland, Washington, 12:22326 (R;US)
Unit Tenaga Nuklear, Bangi, Selangor (Malaysia)
Application of Cs-137 techniques to problems of sediment redistribution in Sungai Lui representative basin, Selangor, Malaysia (Part 1). IAEA Regional Cooperative Agreement (MAL2623/R1/AG), 12:23510 (R;MY)
Application of environmental Cs-137 techniques to problems of sediment redistribution Sungai Lui Representative Basin, Selangor, Malaysia, 12:23418 (R;MY)
Approach to studying the nuclear power option in Malaysia, 12:22482 (R;MY)
Effect of minor alloying elements on radiation damage evolution in stainless steel, 12:22863 (R;MY)
Electron beam-induced graft copolymerization of vinyl monomers on to polyester fibre, 12:23159 (R;MY)
Preliminary investigations on the corrosivity of PUSPATI's tap water toward different types of steel, 12:22861 (R;MY)
Preliminary study of the environmental isotopes in hydrology in the Lower Kelantan River Basin, Kelantan, Malaysia. IAEA Regional Cooperative Agreement. Project 13 - isotope hydrology and sedimentology, 12:23509 (R;MY)
Procedures for determining stream flowrate using radioisotope method in Pesanggrahan River, Indonesia, 12:23515 (R;MY;In Malay)
Report on the environmental isotopic investigations in Lower Kelantan River Basin, Malaysia. (Part II). IAEA Regional Cooperative Agreement MAL2623/R1/AG, 12:23511 (R;MY)
Report on the environmental isotopic investigations in Lower Kelantan River Basin, Malaysia (Part 3). IAEA Regional Cooperative Agreement (MAL2623/R1/AG), 12:23512 (R;MY)
Report on the environmental isotopic investigations in Kedah and Perlis Area, Malaysia (Part 1). IAEA Regional Cooperative Agreement (MAL2623/R1/AG), 12:23513 (R;MY)
Tritium, deuterium and oxygen-18 content of rainwater from Pengkalan Chepa, Kota Bharu, Malaysia. (April 1980-January 1983), 12:23514 (R;MY)
Use of environmental isotopes in hydrogeological studies in Kedah and Perlis, Malaysia. Project proposal summary, 12:23508 (R;MY)
Welding metallurgy of aluminium for radiation tube of reactor, 12:22862 (R;MY;In Malay)
Universidad Autonoma del Estado de Mexico, Toluca. Escuela de Ciencias Quimicas
Non-destructive testing of proteins in single seeds using the /sup 14/N(d,p)/sup 15/N and /sup 14/N(d,proportional to)/sup 12/C reactions, 12:23002 (R;MX;In Spanish)
Universidad Catolica de Chile, Santiago. Facultad de Fisica
Simulation of the roughness of the border of a molecule, 12:24098 (R;US;In Spanish)
Universita di Reggio Calabria (Italy)
Radiation protection elements, 12:23644 (R;IT;In Italian)
University of Southern California, Los Angeles (USA)
Structure-reactivity relationships for predicting environmentally hazardous chemicals. Final report, 1983-1986, 12:23110 (R;US)
University of the Witwatersrand, Johannesburg (South Africa)
First joint congress of the South African Biochemical Society, South African Genetics Society and the South African Society for Microbiology at the University of the Witwatersrand, 29 June-4 July 1986, 12:23542 (R;ZA)
Uppsala Univ. (Sweden). Inst. of Technology
MHD stability properties of Extrap, 12:24259 (R;SE)
Self-similar drift waves in two dimensions, 12:24260 (R;SE)
USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC. Heat Engine Propulsion Div.
Eighth annual report to Congress on the Automotive Technology Development Program, 12:22799 (R;US)
Twenty-fourth automotive technology development contractors' coordination meeting: Preprints, 12:22805 (R;US)
USDOE Assistant Secretary for Conservation and Renewable Energy, Washington, DC. Office of Industrial Programs
The DOE Industrial Energy Conservation Program: Program summary, 12:22788 (R;US)
USDOE Assistant Secretary for Environment, Safety and Health, Washington, DC. Office of Environmental Analysis
An integration methodology applied to the National Energy Policy Plan Environmental Assessment, 12:22663 (R;US)
USDOE Assistant Secretary for Fossil Energy, Washington, DC
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)

USDOE Assistant Secretary for Fossil Energy, Washington, DC. Office of Petroleum Reserves
Strategic Petrolem Reserve: Annual/quarterly report, 12:22199 (R;US)
USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Project and Facilities Management
Work breakdown structure guide, 12:24319 (R;US)
USDOE Assistant Secretary for Management and Administration, Washington, DC. Procurement and Assistance Management Directorate
Listing of awardee names: Active awards as of January 29, 1987, 12:24308 (R;US)
USDOE Bonneville Power Administration, Portland, OR
Draft environmental impact statement on new energy-efficient homes programs: Assessing indoor air quality options: Volume 1, 12:23466 (R;US)
Draft environmental impact statement on new energy-efficient homes programs: Assessing indoor air quality options: Volume 2, 12:23427 (R;US)
USDOE Bonneville Power Administration, Portland, OR. Office of Power and Resources Management
Environmental assessment for 1987 BPA wholesale power and transmission rate filing, 12:22688 (R;US)
USDOE Energy Information Administration, Washington, DC. Office of Coal, Nuclear, Electric and Alternate Fuels
Coal data: A reference, 12:22083 (R;US)
Electric power monthly, December 1986, 12:22689 (R;US)
USDOE Energy Information Administration, Washington, DC. Office of Energy Markets and End Use
Annual energy outlook, 1986, 12:22681 (R;US)
Model documentation for the Mini-Macroeconomic Model: MINMAC, 12:22656 (R;US)
Monthly energy review, December 1986, 12:22172 (R;US)
Residential Energy Consumption Survey: Consumption and expenditures, April 1984 through March 1985: Part 1, National data, 12:22194 (R;US)
USDOE Energy Information Administration, Washington, DC. Office of Oil and Gas
Natural Gas Monthly, January 1987, 12:22207 (R;US)
Oil and Gas Field Code Master List (1986) and Oil and Gas Invalid Field Record List. Data file, 12:22180 (R;US)
Petroleum marketing monthly, December 1986, 12:22195 (R;US)
USDOE Energy Research Advisory Board, Washington, DC. Solid Earth Sciences Panel
Geoscience research for energy security, 12:23718 (R;US)
USDOE Environmental Measurements Lab., New York
The High Altitude Sampling Program: Radioactivity in the stratosphere: Final report, 12:23455 (R;US)
USDOE Morgantown Energy Technology Center, WV
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
Gas hydrates: Technology status report, 12:22203 (R;US)
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
USDOE Nevada Operations Office, Las Vegas
Announced United States nuclear tests, July 1945 through December 1986, 12:23399 (R;US)
USDOE New Brunswick Lab., Argonne, IL
Interlaboratory comparison program for nondestructive assay of prototype uranium reference materials, 12:23074 (R;US)
USDOE Pittsburgh Energy Technology Center, PA
Direct liquefaction contractors' review meeting: Proceedings, 12:22088 (R;US)
USDOE Radiological and Environmental Sciences Lab., Idaho Falls, ID
Quality assurance manual for the Department of Energy laboratory accreditation program for personnel dosimetry systems, 12:23629 (R;US)
USDOE, Washington, DC
Energy intensity in manufacturing: Comparison of historical results with forecasts, 12:22654 (R;US)
Worldwide nickel/iron battery development for electric vehicle applications, 12:22641 (R;US)
Ustav Jaderneho Vyzkumu CSKAE, Rez (Czechoslovakia)
Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 4. Results of measurement at disturbed geometry. PORGEVY 1, PORGEVY 0 variants, 12:22472 (R;CS;In Russian)
Progress report for 1985, 12:24324 (R;CS;In Czech)
Scientific conference proceedings. Session 4. Ionizing radiation, 12:23154 (R;CS;In Czech)

V

Valtion Teknillinen Tutkimuskeskus, Espoo (Finland)
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Flow-rate measurement using radioactive tracers and transit time method, 12:23226 (R;FI;In Finnish)
Fracture toughness correlations, 12:22875 (R;FI;In Finnish)

Transfer ionization in 0.5-1.5 MeV/u O^{5-8+} + He collisions, 12:23795 (R;US)

Western Michigan Univ., Kalamazoo (USA). Dept. of Physics
High charge state, ion-atom collision experiments using accel-decel, 12:23793 (R;US)
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)

Western Research Inst., Laramie, WY (USA)
Postburn lithology and mineralogy at Rio Blanco Oil Shale Company's Tract C-a retort 1, Rio Blanco County, Colorado, 12:22214 (R;US)
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)

Westinghouse Electric Corp., Orlando, FL (USA). Steam Turbine Generator Div.
Metallurgical development and manufacture of large heavy structures for cryogenic applications: Final report, 12:23195 (R;US)

Westinghouse Hanford Co., Richland, WA (USA)
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)

Westinghouse Materials Co. of Ohio, Cincinnati (USA). Feed Materials Production Center
Start-up and operation of the biodenitrification demonstration facility at the FMPC [Feed Materials Production Center], 12:22291 (R;US)

Westinghouse Research and Development Center, Pittsburgh, PA (USA)
Development of high-efficiency solar cells on silicon web: Final progress report for the period April 1, 1984 to September 30, 1986, 12:22367 (R;US)

Weston (Roy F.), Inc., Decatur, GA (USA)
Remediation of PCB (polychlorinated biphenyl) contamination, Woodbridge Research Facility, Woodbridge, Virginia. Final report, 27 September 1984-30 April 1986, 12:23472 (R;US)

West Valley Nuclear Services Co., Inc., West Valley, NY (USA)
Characterization of the head end cells at the West Valley Nuclear Fuel Reprocessing Plant, 12:22262 (R;US)
Decontamination of the extraction sample aisle at the West Valley Demonstration Project, 12:22261 (R;US)

West Virginia Public Transportation Div., Charleston (USA)
West virginia transit-marketing manual: get on the Bus and Ride, 12:22779 (R;US)

Wisconsin Univ., Madison (USA)
Effect of the variation of the level of lactose conversion in an immobilized lactase reactor upon operating costs for the production of Baker's yeast from hydrolyzed permeate obtained from the ultrafiltration of cottage cheese whey, 12:22363 (R;US)
MINIMARS conceptual design: Final report, 12:24301 (R;US)
Reversed field pinch boundary study: Annual progress report for the period March 14, 1986-March 13, 1987, 12:24283 (R;US)

Wisconsin Univ., Milwaukee (USA). Dept. of Mechanical Engineering
An assessment of district heating and cooling alternatives with waste-to-energy co-generation potential on the east side of the City of Milwaukee, 12:22795 (R;US)

Wyoming Univ., Laramie (USA). Dept. of Chemical Engineering
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)
Use of basic nitrogen to chemically clean coal: Quarterly report No. 2 for the period December 16, 1986 to March 15, 1987, 12:22135 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

A

A CODES
Experience on several devices for a SAS/GRAPH general application sample library, 12:24332 (R;IT)

Application of a theory for economic assessment of corrosion damage, 12:23482 (BA;US)
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
Effects of atmospheric exposure on roughening, recession, and chemical alteration of marble and limestone sample surfaces in the eastern United States, 12:23479 (BA;US)
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Model for economic assessment of acid damage to building materials, 12:23478 (BA;US)
Environmental Transport
Application of trajectory analysis to the assessment of local and long-range contributions to acidic deposition, 12:23449 (J;NL)
Source-receptor relationships and control strategy formulation, 12:23425 (R;US)
Long-Range Transport
A comparison of a multilayer regional-scale acid rain assessment model (MLRAPT) with a single-layer assessment model, RAPT, 12:23448 (J;NL)
Pollution Sources
Source-receptor relationships and control strategy formulation, 12:23425 (R;US)
Public Information
An examination of models of issue development: Environmental scanning using on-line databases: Final report (Acid rain, PCBs, thermal pollution, ground water pollution), 12:22694 (R;US)
Research Programs
Comprehensive experimental design plan to relate pollutant sources to acidic deposition. Final report, 12:23439 (R;US)
Trajectories
Application of trajectory analysis to the assessment of local and long-range contributions to acidic deposition, 12:23449 (J;NL)

ACOUSTIC EMISSION TESTING
Pressure Vessels
Why and how acoustic emission in pressure vessel first hydrotest, 12:23232 (R;BR)

ACROLEIC ACID
See ACRYLIC ACID

ACRYLAMIDE
Chemical Radiation Effects
Grafting of acrylamide to nylon-6 by the electron beam preirradiation technique. V. Permeability and selectivity of the grafted membranes, 12:23150 (RA;IL)
Genetic Effects
Mechanisms for induction of chromosome aberrations in male germ cells by chemical mutagens, 12:23697 (RA;US)
Mutagen Screening
Mechanisms for induction of chromosome aberrations in male germ cells by chemical mutagens, 12:23697 (RA;US)
Specific-locus experiments and related studies with four chemicals, 12:23699 (RA;US)

ACRYLIC ACID
Chemical Radiation Effects
Electron beam-induced graft copolymerization of vinyl monomers on to polyester fibre, 12:23159 (R;MY)
Synthesis of fluorinated ionomer membranes by the electron beam preirradiation method, 12:23152 (RA;IL)

ACTINIDE COMPOUNDS
Molecular Structure
Actinide-specific complexing agents: their structural and solution chemistry, 12:23185 (J;CH)

ACTINIDES
See also AMERICIUM
BERKELIUM
NEPTUNIUM
PLUTONIUM
THORIUM
URANIUM
Fluorination
Low temperature preparation of actinide hexafluorides by O_2F_2 and KrF_2, 12:23181 (J;CH)
Photoacoustic Spectroscopy
Laser photoacoustic spectroscopy for trace level detection of actinides in groundwater, 12:22985 (R;US)
Sample Preparation
Preparation, properties, and some recent studies of the actinide metals, 12:22888 (J;CH)
Separation Processes
Separation of ionic solutes. Abstracts of papers, 12:23021 (R;CS;In English and Russian)
Solvent Extraction
New phosphorus containing extractants for separation of metals, 12:23029 (RA;CS)
Superconductivity
Superconductivity in the actinides, 12:22892 (J;CH)
Thermodynamic Properties
Systematic properties of actinide metals, 12:22891 (J;CH)

ACTIVATED CARBON
Nitridation
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)

ACTIVATION ANALYSIS
Fourth Australian conference on nuclear techniques of analysis: Proceedings, 12:23034 (R;AU)
Comparative Evaluations
Comparison of methods of analysis for natural environmental radionuclides, especially Th and U, at the level of a few μg.g/sup -1/, 12:23044 (RA;AU)
Cross Sections
Reaction cross section measurement for 14 MeV neutron activation analysis at KORONA. Pt. 2, 12:22989 (R;DE;In German)
Fast Neutrons
Fast neutron activation analysis, 12:22990 (R;DE;In German)
Pulsed Neutron Techniques
Application of PNA-technique for the measurement of multi-phase flow, 12:22999 (R;NO;In Norwegian)
Rare Earths
Determination of some rare earth elements in technological materials using neutron activation analysis and atomic absorption spectrometry, 12:23006 (RA;CS;In Czech)
Uses
Recent applications of neutron activation analysis in geoscience at Lucas Heights, 12:23046 (RA;AU)

ACTIVATION (RADIO)
See RADIOACTIVATION

ADDITIVES
Performance Testing
Evaluation of Glo-Klen additive in desulfurization: Final report (GLO-KLEN), 12:22167 (R;US)
Sorptive Properties
Evaluation of Glo-Klen additive in desulfurization: Final report (GLO-KLEN), 12:22167 (R;US)

ADENOCARCINOMAS
See CARCINOMAS

ADENOSINE TRIPHOSPHATE
See ATP

ADRENERGICS
See SYMPATHOMIMETICS

ADSORBENTS
See also ACTIVATED CARBON
CHARCOAL
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 12:23104 (RA;CS)
Studies on new titanium ferrocyanide sorbents for radiocaesium removal from primary coolants of pressurized water reactors, 12:23103 (RA;CS)

Uses
Possible uses of inorganic adsorbents in nuclear power engineering, 12:23102 (RA;CS;In Czech)
AEROSOL MONITORING
Gamma Detection
Investigation of gamma radionuclide concentration in surface air, 12:23462 (RA;CS;In Slovak)
AEROSOLS
See also RADIOACTIVE AEROSOLS
SMOKES
Activation Analysis
Instrumental neutron activation analysis of fly ash and aerosols, 12:23005 (RA;CS;In Czech)
AFGHANISTAN
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
AFLATOXIN
Labelling
Preparation of C-labelled aflatoxins with high specific activity and yield, 12:23175 (RA;ZA)
AFTER-HEAT
Mathematical Models
Mathematical modelling of the thermal effects of radioactive wastes with low decay heat output on the host rock in the Konrad shaft, 12:22309 (R;DE;In German)
AGE ESTIMATION
Changing face of fission track dating: recent advances, 12:23722 (RA;AU)
AGGLOMERATION
Computerized Simulation
Diffusion-limited aggregation with long range force, 12:24103 (R;XA)
AGGREGATION
See AGGLOMERATION
AIR
See also SURFACE AIR
Chemical Reactions
Reaction of PuH/sub x/ and Pu+PuH/sub x/ mixtures with air, 12:23182 (J;CH)
Natural Radioactivity
Investigation of the concentrations of radon-222 and its daughter products in Loutraki spas (Peloponnese, Greece), 12:23453 (R;GR;In Greek)
Quantitative Chemical Analysis
Direct determination of polycyclic aromatic hydrocarbons in extracts of particulate matter, 12:23080 (J;US)
AIR FILTERS
Efficiency
Decontamination factor determination for adsorption filters in nuclear power plants, 12:23198 (RA;CS;In Slovak)
Determination of removal efficiency of vent-air system filters of V-1 nuclear power plant, 12:23197 (RA;CS;In Slovak)
AIR INFILTRATION
Corrosion-product transport in a cycling fossil plant: Final report (Cycling operations), 12:22416 (R;US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Southeast Chicago study: an assessment of environmental pollution and public-health impacts. Final report, 12:22666 (R;US)
Diffusion
Modeling the polluted coastal urban environment: Volume 1, The PBL [planetary boundary level] model: Final report, 12:23413 (R;US)
Environmental Transport
Application of trajectory analysis to the assessment of local and long-range contributions to acidic deposition, 12:23449 (J;NL)
Numerical models for computation of pollutant-dispersion in the atmosphere, 12:23430 (R;DE;In German)
Stochastic prediction of dispersive-contaminant transport. Final report, 1 September 1983-30 April 1986, 12:23441 (R;US)
Mathematical Models
User's guide for PEM-2: Pollution Episodic Model (version 2). Final report, 12:23433 (R;US)
Point Sources
User's guide for PEM-2: Pollution Episodic Model (version 2). Final report, 12:23433 (R;US)
Pollution Sources
Stability of parts-per-million organic cylinder gases and results of source test analysis audits: Status Report 8, 12:23440 (R;US)
Toxicity
Emission factors for several toxic air pollutants from fluidized-bed combustion of coal, 12:22175 (R;US)
Trajectories
Application of trajectory analysis to the assessment of local and long-range contributions to acidic deposition, 12:23449 (J;NL)
AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Pollution Control Equipment
Motor vehicle tampering survey - 1985. Final report, 12:22809 (R;US)
Standards
Review of new source performance standards for petroleum-refinery fuel gas. Final report, 12:22197 (R;US)
AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Economic Impact
Why an SO_2 emission tax is an unpopular policy instrument: Simulation results from a general equilibrium model of the Norwegian economy, 12:23424 (R;US)
AIR POLLUTION MONITORING
See also AEROSOL MONITORING
Data Analysis
Iowa air quality report, 1985, 12:23437 (R;US)
AIR POLLUTION MONITORS
Operation
Data collection and presentation procedures for the US Army's Chemical Hazard Assessment Warning System (CHAWS): For Tooele Army Depot South, Utah, 12:23446 (R;US)
Tooele Army Depot air quality monitoring systems user's guide: System description, standard operating procedures, and installation report, 12:23444 (R;US)
AIR QUALITY
Planning
Draft environmental impact statement on new energy-efficient homes programs: Assessing indoor air quality options: Volume 2, 12:23427 (R;US)
AIR WALL IONIZATION CHAMBERS

Corrosion Resistance
Corrosion behaviour of container materials for geological disposal of high-level waste. Annual progress report 1984, 12:22286 (R;FR)
Phase Diagrams
Alloy phase stability, 12:24114 (R;US)
Physical Radiation Effects
Role of small γ-quantum doses in defect structure rearrangement in metals and alloys, 12:22842 (RA;SU;In Russian)
Sorptive Properties
A summary status of advanced water electrolysis and hydrogen storage/transport R and D, 12:22352 (BA;US)
Welding
Case study of the propagation of a small flaw under PWR loading conditions and comparison with the ASME Code design life comparison of ASME Code Sections III and XI, 12:22461 (BA;US)
ALLOY-WAZ-16
See NICKEL BASE ALLOYS
ALPHA PARTICLES
Emitted by nuclei.
Density
Active diagnostics of magnetically confined alpha particles by pellet injection, 12:24251 (R;JP)
ALPHA REACTIONS
Capture
Microscopic description of electromagnetic transitions and photonuclear reactions, 12:23995 (R;DE;In German)

Coupled Channel Theory
Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei, 12:24028 (R;SU;In Russian)
Nuclear Forces
Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei, 12:24028 (R;SU;In Russian)

ALPHA SPECTROMETERS
Telescope Counters
Telescope for study of (n,α) reactions, 12:23358 (RA;CS;In Slovak)

ALPHA SPECTROSCOPY
Neutron Reactions
/sup 95/Mo(n,α) and /sup 143/Nd(n,α) reactions with 3 MeV neutrons, 12:23969 (RA;CS;In Slovak)

ALPHA-BEARING WASTES
Vitrification
In situ vitrification of transuranic wastes: An updated systems evaluation and applications assessment, 12:22307 (R;US)

ALPHA-TRANSFER REACTIONS
Reviews
Nuclear structure and reaction mechanisms studied on alpha-particle transitions, 12:24032 (R;DE;In German)

ALTERNATE FUELS

ALUMINIA
See ALUMINIUM OXIDES

ALUMINIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
Diffusion
Diffusion and interaction with vacancies of non-transition-metal solutes in some FCC metals, 12:22921 (J;GB)
Electrodeposition
Evaluation of wear rates and mechanisms of titanium diboride-graphite composite materials proposed for use as cathodes in Hall-Heroult cells, 12:22956 (R;US)
Fracture Properties
The failure of aluminum compact shear specimens under mixed mode loading, 12:22869 (R;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Implantation
Thermal annealing of Fe implanted Al_2O_3 in an oxidizing and reducing environment, 12:22911 (J;NL)
Microstructure
Characterization of Al and Al-Cr-Al thin films, 12:22823 (R;US)
Neutron Reactions
Gamma ray production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb at 90 deg. , 12:23957 (R;XA)
Physical Radiation Effects
Morphological instabilities and ion beam mixing in Ge, 12:22910 (J;NL)
Resolvability of defect ensembles with positron annihilation studies, 12:22915 (J;US)
Thermal annealing of Fe implanted Al_2O_3 in an oxidizing and reducing environment, 12:22911 (J;NL)
Pitting Corrosion
Corrosion of aluminum jackets on aboveground heat-distribution systems. Final technical report, 12:22820 (R;US)
Positron Collisions
Positron or positronium-like surface state on Al(100), 12:24124 (J;US)
Superconductivity
Characterization of Al and Al-Cr-Al thin films, 12:22823 (R;US)
Tissue Distribution
Enzyme regulation, 12:23691 (RA;US)

ALUMINIUM 26
Electron Capture Decay
Measurement of EC/β/sup +/ ratio in light nuclei decay, 12:23955 (RA;CS;In Slovak)

ALUMINIUM 27 TARGET
Neutron Reactions
Spin-spin potentials in /sup 27/Al/sub pol/+n/sub pol/ and the nuclear Ramsauer effect, 12:23956 (J;US)
Nitrogen 14 Reactions
A π^0 spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)
Oxygen 16 Reactions
A π^0 spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)
Sulfur 32 Reactions
A π^0 spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
INCONEL 617
Chemical Reaction Kinetics
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Corrosion
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Corrosion Products
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Electric Conductivity
Electron transport in La/sub 100-//sub x/Al/sub x/ metallic glasses, 12:22884 (J;US)
Electron Beam Welding
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
Electronic Specific Heat
Pressure dependence of the specific heat of heavy-fermion compounds ($CeAl_3$; $CeCu_6$; UBe_{13}; UPt_3), 12:22855 (R;US)
Fracture Properties
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
Grain Boundaries
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
Laser Welding
Electron emission and plasma formation during laser beam welding, 12:22909 (J;US)
Magnetoresistance
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)
Mechanical Properties
Evaluation of the microstructure and mechanical properties of a Ti-6Al-4V shell, 12:22854 (R;US)
Microstructure
Evaluation of the microstructure and mechanical properties of a Ti-6Al-4V shell, 12:22854 (R;US)
Microstructural analysis of rapid solidification and undercooling in the Al-Ge system, 12:22918 (J;US)
Oxidation
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Phase Transformations
Pressure dependence of the resistivity of Ce_3Al, 12:22857 (R;US)
Radiation Effects
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Scaling
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Solidification
Microstructural analysis of rapid solidification and undercooling in the Al-Ge system, 12:22918 (J;US)
Spin
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)

Thermoelectric Properties
Electron transport in La/sub 100-//sub x/Al/sub x/ metallic glasses, 12:22884 (J;US)
Transition Temperature
Electron transport in La/sub 100-//sub x/Al/sub x/ metallic glasses, 12:22884 (J;US)
Welding
Welding metallurgy of aluminium for radiation tube of reactor, 12:22862 (R;MY;In Malay)

ALUMINIUM ARSENIDES
Electronic Structure
Energy spectra of donors and acceptors in quantum-well structures: Effect of spatially dependent screening, 12:22964 (J;US)
Growth and characterization of GaAs/AlAs superlattice alloys, 12:22960 (R;US)
Energy Spectra
Energy spectra of donors and acceptors in quantum-well structures: Effect of spatially dependent screening, 12:22964 (J;US)
Superlattices
Growth and characterization of GaAs/AlAs superlattice alloys, 12:22960 (R;US)

ALUMINIUM BASE ALLOYS
Annealing
Characterization of rapidly solidified Al-Be-Li and Al-Be ribbons, 12:22821 (R;US)
Hardness
Characterization of rapidly solidified Al-Be-Li and Al-Be ribbons, 12:22821 (R;US)
Materials Testing
Hot cracking susceptibility of PAR-1 aluminium alloy evaluated in Houldcroft test, 12:22843 (R;PL;In Polish)
Neutron Diffraction
Magnetic structures of HoFe/sub 5/Al/sub 7/. A neutron diffraction study, 12:22836 (RA;IL)
Welding
Hot cracking susceptibility of PAR-1 aluminium alloy evaluated in Houldcroft test, 12:22843 (R;PL;In Polish)

ANEMOMETERS
Heat Exchangers
Use of the Laser-Doppler-Anemometry for the measurement of velocity distributions at the intake of a longitudinal flow heat exchanger, 12:23224 (R;DE;In German)
Velocity
Use of the Laser-Doppler-Anemometry for the measurement of velocity distributions at the intake of a longitudinal flow heat exchanger, 12:23224 (R;DE;In German)
ANGIOGRAPHY
See BLOOD VESSELS
ANGULAR MOMENTUM
Relativistic Range
Transformation properties of Euler angles of a relativistic spinning top, 12:24175 (RA;CS;In Slovak)
ANHYDRITE
Thermal Conductivity
Thermal properties of Permian Basin evaporites to 493 K temperature and 30 MPa confining pressure, 12:22937 (R;US)
Thermal Diffusivity
Thermal properties of Permian Basin evaporites to 493 K temperature and 30 MPa confining pressure, 12:22937 (R;US)
ANIMAL CELLS
Includes human cells.
See also CHO CELLS
EMBRYONIC CELLS
TUMOR CELLS
Biological Radiation Effects
"Thin-Down" in radiobiology, 12:23684 (BA;US)
Current biophysical approaches to the understanding of biological effects of radiation in terms of local energy deposition, 12:23633 (RA;FR)
Biological Variability
Detection of protein perturbations in metabolically activated cells, 12:23706 (RA;US)
Chromosomal Aberrations
Mammalian cytogenetics, 12:23561 (RA;US)
DNA Repair
Repair of human DNA, 12:23653 (RA;US)
Genetic Radiation Effects
Repair of human DNA, 12:23653 (RA;US)
ANIMAL TISSUES
See also BONE MARROW
Biological Radiation Effects
Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
Tumor and normal tissue effects and therapeutic gain factor for Cf-252, 12:23593 (J;US)
Lethal Irradiation
Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
ANIONS
Oxidation
Metal arene complexes in coal structure determination: Quarterly report for the period December 1986-February 1987 (Hexamethylbenzenetricarbonylchromium anion), 12:22148 (R;US)
ANODES
Heat Resisting Alloys
Experimental nickel-cobalt recovery from melt-refined superalloy scrap anodes. Report of investigations/1986, 12:23140 (R;US)
Materials Recovery
Experimental nickel-cobalt recovery from melt-refined superalloy scrap anodes. Report of investigations/1986, 12:23140 (R;US)
ANTHRACENE
Deuteration
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
ANTIFERROMAGNETIC MATERIALS
Phase Diagrams
Phase diagram of the ground state of spin-1 quantum chains, 12:24127 (J;US)
ANTILAMBDA PARTICLES
Pair Production
Λ production in e^+e^- annihilation at 29 GeV, 12:23844 (J;US)
Particle Production
Λ production in e^+e^- annihilation at 29 GeV, 12:23844 (J;US)
ANTIMONY ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
ANTIMONY CHLORIDES
Reflectivity
Effect of c-axis dispersion on the optical properties of acceptor-type graphite intercalation compounds, 12:22974 (J;US)
ANTIMONY COMPOUNDS
See also ANTIMONY CHLORIDES
Magnetic Susceptibility
Magnetic susceptibility of CfN, CfAs and CfSb, 12:22934 (J;CH)
ANTINEUTRINO-NUCLEON INTERACTIONS
Particle Production
Production of lambda particles in antineutrino-nucleon collisions and diquarks, 12:23865 (RA;CS;In Slovak)
ANTINEUTRON REACTIONS
Antineutrons
Search for n-n-bar oscillations by measurement of nucleon emission from n-bar annihilations in the nucleus, 12:23359 (RA;CS;In Slovak)
ANTIPROTON REACTIONS
Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)
Annihilation
High nuclear temperatures by antimatter-matter annihiliation, 12:24048 (BA;US)
Charged Particles
Anisotropic and correlated emissions of short range charged particles in anti pAg/Br reactions of 1.4 GeV/c incident momentum observed in photographic emulsions, 12:23967 (R;NO)

Study of the angular distribution of the secondary particles of anti pAg/Br reactions at 1.4 GeV/c incident momentum observed in photographic emulsion, 12:23966 (R;NO)
Particle Production
Multinucleon captures of slow antiprotons in complex nuclei and a search for the H dibaryon, 12:23846 (J;NL)
Proton-Antiproton Interactions
Antinucleon physics, 12:24049 (BA;US)
High nuclear temperatures by antimatter-matter annihiliation, 12:24048 (BA;US)
Quark Model
Antinucleon physics, 12:24049 (BA;US)

ANTIPROTONIC ATOMS
See HADRONIC ATOMS

ANTIPROTONS
Magnetic Dipole Moments
Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)
Particle Production
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)

ANTRIM SHALES
See BLACK SHALES

APHIDS
Viral Diseases
Molecular biological investigation of an aphid picornavirus, 12:23615 (RA;ZA)

APPALACHIA
The mountainous region, including valleys and plateaus extending through the eastern USA from New England to Georgia and Alabama.
Black Shales
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
Natural Gas Deposits
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)

APPALACHIAN MOUNTAINS
Hydrology
Role of pore water circulation during the deformation of foreland fold and thrust belts, 12:23727 (J;US)

APPENNINES
Hydrology
Role of pore water circulation during the deformation of foreland fold and thrust belts, 12:23727 (J;US)

APPLIANCES
Energy Efficiency
Science and society test X: Energy conservation, 12:22769 (J;US)

AQUIFERS
Computer Codes
Application of a transport-diffusion model to a coastal aquifer utilizing in situ measurements of dispersivity, 12:23505 (RA;XA)
Computerized Simulation
Computer modelling of confined aquifer systems for interpretation of chemical and environmental isotope data, 12:23504 (RA;XA)
Flow Models
Application of a transport-diffusion model to a coastal aquifer utilizing in situ measurements of dispersivity, 12:23505 (RA;XA)
Computer modelling of confined aquifer systems for interpretation of chemical and environmental isotope data, 12:23504 (RA;XA)
Hydrology
Use of linear compartmental simulation approach for quantitative interpretation of isotope data under time variant flow conditions, 12:23506 (RA;XA)

ARCHAEOLOGICAL SPECIMENS
PIXE Analysis
Artefact identification, 12:23045 (RA;AU)
Trace element analysis of archaeological artefacts from Pella, Jordan, 12:23043 (RA;AU)

AREA POLLUTION SOURCES
See POLLUTION SOURCES

ARGON
Electron-Atom Collisions
Elastic scattering of electrons from inert gases: 5. Argon and krypton in the vicinity of Ramsauer-Townsend minima and on the choice of pseudo-states, 12:23804 (R;XA)
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
Photoionization
Multiphoton ionization in intense ultraviolet laser fields, 12:23792 (R;US)

ARGON 40
Nuclear Deformation
Scattering of polarized neutrons on argon and study of the complex spin-orbit potential, 12:23958 (R;DE;In German)

ARGON 40 REACTIONS
Heavy Ion Fusion Reactions
Study of the fission dynamics of hot atomic nuclei by means of the neutron emission, 12:23968 (R;DE;In German)
Potential Scattering
Real and imaginary part of the potential between two nuclei and the realistic nucleon-nucleon interaction, 12:23996 (R;DE;In German)
Quasi-Fission
Study of the fission dynamics of hot atomic nuclei by means of the neutron emission, 12:23968 (R;DE;In German)

ARGON 40 TARGET
Neutron Reactions
Scattering of polarized neutrons on argon and study of the complex spin-orbit potential, 12:23958 (R;DE;In German)

ARGON IONS
Collisions
A sputtering derived atomic oxygen source for studying fast atom reactions, 12:23791 (R;US)
Implications of heavy-ion-induced satellite x-ray emission II, 12:24129 (J;NL)
Implications of heavy-ion-induced satellite x-ray emission III, 12:24130 (J;NL)

ARGONNE SUPERCONDUCTING LINAC
See ATLAS SUPERCONDUCTING LINAC

ARIZONA
Hazardous Materials
Transportation of hazardous materials in Arizona. Volume 1. Comprehensive study approach, analyses and findings, 12:22667 (R;US)
Transportation of hazardous materials in Arizona. Volume 2. Hazardous materials data base management system: development and programs, 12:22668 (R;US)
Transportation of hazardous materials in Arizona. Volume 3. Executive summary, 12:22669 (R;US)
Waste Transportation
Transportation of hazardous materials in Arizona. Volume 1. Comprehensive study approach, analyses and findings, 12:22667 (R;US)
Transportation of hazardous materials in Arizona. Volume 2. Hazardous materials data base management system: development and programs, 12:22668 (R;US)
Transportation of hazardous materials in Arizona. Volume 3. Executive summary, 12:22669 (R;US)

ARMS CONTROL
Mediation
Arms control, nonproliferation, and US national security, 12:22815 (BA;US)
Verification
Satellite verification of arms control agreements, 12:23409 (BA;US)
Unattended in-country stations for seismic verification, 12:23408 (BA;US)
Verification in all its aspects: a comprehensive study on arms control and disarmament verification pursuant to UNGA (United Nations General Assembly) resolution 40/152(o), 12:22816 (R;CA)

ARMY PERSONNEL
See MILITARY PERSONNEL

AROMATIC ACIDS
See CARBOXYLIC ACIDS

AROMATIC COMPOUNDS
See AROMATICS

AROMATICS
See also ALKYLATED AROMATICS
BENZENE
PHENOLS
POLYCYCLIC AROMATIC HYDROCARBONS

Adsorption
Extended luminescence calibration curves for studying surface interactions in solid-surface luminescence analysis, 12:23079 (J;US)

Bond Angle
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

Bond Lengths
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

Crystal Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

Decomposition
Evaluation of ultraviolet light/oxidizing agent as a means for the degradation of toxic organic chemicals in aqueous solutions, 12:23143 (R;US)

Deuteration
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)

Electron Transfer
Triplet-mediate photoreduction of viologens by aromatic hydrocarbons: a laser flash-photolysis study, 12:23148 (J;GB)

Luminescence
Extended luminescence calibration curves for studying surface interactions in solid-surface luminescence analysis, 12:23079 (J;US)

Mass Spectra
Separation and characterization of hydroxyl aromatics in oils and asphaltenes from nondistillable, pyridine soluble coal-liquids (Hydroxyl aromatics), 12:22145 (RA;US)
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)

Molecular Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

NMR Spectra
Fluxional behavior in the solid state: bullvalene, 12:23130 (J;US)

Photolysis
Triplet-mediate photoreduction of viologens by aromatic hydrocarbons: a laser flash-photolysis study, 12:23148 (J;GB)

Raman Spectra
Triplet (T_1) state resonance Raman spectroscopy of some azanaphthalenes, 12:23113 (J;US)

Reduction
Triplet-mediate photoreduction of viologens by aromatic hydrocarbons: a laser flash-photolysis study, 12:23148 (J;GB)

Resonance
Fluxional behavior in the solid state: bullvalene, 12:23130 (J;US)

Structural Chemical Analysis
Separation and characterization of hydroxyl aromatics in oils and asphaltenes from nondistillable, pyridine soluble coal-liquids (Hydroxyl aromatics), 12:22145 (RA;US)

Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986 (Dephenymethane, tetrahydronaphthalene), 12:22149 (R;US)

ARRAY PROCESSORS

Computer Architecture
ANL/Star project: a new architecture for large scale theoretical physics computations, 12:24360 (BA;NL)

Design
Development and applications of photosensitive device systems to studies of biological and organic materials: Progress report for period June 1964-December 1986, 12:22987 (R;US)

Performance
Development and performance evaluation of a finite element simulator using parallel processing array (PPA), 12:24372 (TJ;US)

ARSENIC

Absorption Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)

Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)

Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)

ARTIFICIAL INTELLIGENCE

Parallel Processing
High parallelism and an effective reasoning procedure, 12:24345 (R;NO)

ASCITES TUMOR CELLS

Biological Radiation Effects
Cell survival parameters of Ehrlich ascites tumor cells irradiated by gamma-radiation in oxygenated and anoxic conditions deduced from in vivo assays of ascites tumor cancerogenesis, 12:23646 (R;SU;In Russian)

Radiosensitivity
Mathematical model of Ehrlich ascites tumor cancerogenesis from in vitro treated cells, 12:23645 (R;SU;In Russian)

Survival Curves
Cell survival parameters of Ehrlich ascites tumor cells irradiated by gamma-radiation in oxygenated and anoxic conditions deduced from in vivo assays of ascites tumor cancerogenesis, 12:23646 (R;SU;In Russian)

ASHES
See also FLY ASH

Chemical Composition
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Evaluation of Glo-Klen additive in desulfurization: Final report, 12:22167 (R;US)
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)

Sorptive Properties
Evaluation of Glo-Klen additive in desulfurization: Final report, 12:22167 (R;US)

ASPERGILLUS

Cultivation
Microbial coal liquefaction, 12:22112 (RA;US)

ASPHALTENES

Desulfurization
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)

Fractionation
Separation and characterization of hydroxyl aromatics in oils and asphaltenes from nondistillable, pyridine soluble coal-liquids, 12:22145 (RA;US)

Hydrogenation
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)

ASTRONOMY

X Radiation
History of x-ray transients as seen by Vela, 1969-1979, 12:23774 (J;US)

ATLAS SUPERCONDUCTING LINAC
Argonne Tandem/Linac Accelerator.

Beam Bunching
Bunching in time at the ATLAS [Argonne Tandem-Linac Accelerator System] accelerator, 12:23267 (R;US)

ATMOSPHERIC CIRCULATION

Mathematical Models
Continued contributions to large-eddy simulation, 12:23420 (R;US)

ATMOSPHERIC EXPLOSIONS
Neutron Flux
Neutron exposure for DOD (Department of Defense) nuclear test personnel. Technical report, 15 June-15 December 1984, 12:23398 (R;US)
ATMOSPHERIC PRECIPITATIONS
See also SNOW
Statistical Models
Estimation of source-receptor matrices for deposition of NO/sub x/-N, 12:23450 (J;NL)
Water Chemistry
Kinetics of hydrogen peroxide—sulfur(IV) reaction in rainwater collected at a northeastern U.S. Site, 12:23447 (J;US)
ATOMIC ABSORPTION SPECTROSCOPY

ISOELECTRONIC ATOMS
Adsorption
Interaction of an adsorbed atom with a laser. Technical report, 12:23790 (R;US)
Photon Collisions
Interaction of an adsorbed atom with a laser. Technical report, 12:23790 (R;US)
ATP
Labelling
Enzymic preparation of (γ-/sup 32/P)ATP, (α-/sup 32/P)dGTP and (α-/sup 32/P) GTP, 12:23538 (RA;ZA)
AURORAE
See also POLAR-CAP AURORAE
Luminosity
Global auroral responses to magnetospheric compressions by shocks in the solar wind: two case studies, 12:23777 (R;US)
Plasma Drift
Kinetic model of auroral plasma formation II: simultaneous multi-satellite ion observations and interpretations. Technical report, 12:23778 (R;US)
AURORAL OVAL
Plasma Expansion
Dynamics of the equatorward boundary of the auroral oval, 12:23781 (R;US)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Physical Radiation Effects
On transport of helium grain boundaries during irradiation, 12:22864 (R;DK)
Reactor Materials
Dynamic tensile tests with superimposed ultrasonic oscillations applied to stainless steel, 12:22470 (R;DE;In German)
Ultrasonic Testing
Dynamic tensile tests with superimposed ultrasonic oscillations applied to stainless steel, 12:22470 (R;DE;In German)
AUSTRALIA
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
AUTOMATION
ANL statement of site strategy for automated office support systems, 12:24318 (R;US)
AUTOMOTIVE FUELS
Industry perspectives summary: Results of feedback from industry, 12:22811 (R;US)
Prices
Simulating the market for automotive fuel efficiency: The SHRSIM model, 12:22775 (R;US)
AUXINS
Defined media for plant tissue culture: Final report, 12:22365 (R;US)
AXIONS
Estimate of σ-> axions decay rate, 12:23861 (R;XA)

B

B CODES
Experience on several devices for a SAS/GRAPH general application sample library, 12:24332 (R;IT)
B MESONS
Decay
Study of the decay B→psiX, 12:23841 (J;US)
Hadronic Particle Decay
Systematic study of large CP violations in decays of neutral b-flavored mesons, 12:23904 (J;US)
Mass Difference
Study of the decay B→psiX, 12:23841 (J;US)
Weak Particle Decay
The J/psi trigger-tag for study of weak beauty quark decays at the SSC [Superconducting Super Collider], 12:23857 (R;US)
BACKGROUND RADIATION
Aerial Monitoring
Gamma radiation measurements in Israel, 12:23456 (RA;IL)
BACON

METHANOGENIC BACTERIA
Cellulolytic Activity
Versatile assay for total cellulase activity using radiolabelled bacterial cellulose, 12:22368 (RA;ZA)
Detection
Synthetic biotinylated and /sup 32/P-labelled 26mer oligonucleotide probe for the detection of campylabacter jejuni, 12:23614 (RA;ZA)
Radurization
Microbiology and radurization of dehydrated food products, 12:23622 (RA;ZA)
BAG MODEL
Lectures
Skyrmions, dense matter and nuclear forces, 12:24039 (R;DK)
BAGHOUSES
Computerized Simulation
Lime-spray-dryer flue-gas desulfurization computer model user's manual. Final report, January 1982-April 1986, 12:22436 (R;US)
Performance
User's guide for PARTIC II (Version II): A computer code for analyzing the performance of particulate-control devices, 12:22153 (R;US)

BALLISTIC MISSILE DEFENSE
Military Strategy
Optimal deployment of missile interceptors, 12:22813 (R;US)
BALLOONING INSTABILITY
Reviews
Resistive MHD modes and relaxation in Tokamak plasmas, 12:24203 (RA;FR)
BAND THEORY
Interpolation
On the interpolation of eigenvalues and a resultant integration scheme, 12:24123 (J;US)
BANDING TECHNIQUES
Some answers to the mechanism of C-banding, 12:23559 (RA;ZA)
BANKS
See COMMERCIAL BUILDINGS
BARIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Emission Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
BARIUM COMPOUNDS
See also BARIUM SULFIDES
NMR Spectra
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
Nuclear Magnetic Resonance
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
BARIUM SULFIDES
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
BARSEBAECK-1 REACTOR
Barsbaeck, Malmo, Sweden
Pollution Abatement
Quarterly report of the Swedish Nuclear Power Inspectorate. 4th quarter 1985, 12:22444 (R;SE;In Swedish)
Reactor Operation
Quarterly report of the Swedish Nuclear Power Inspectorate. 4th quarter 1985, 12:22444 (R;SE;In Swedish)
BARSEBAECK-2 REACTOR
Barsebaeck, Malmo, Sweden
Pollution Abatement
Quarterly report of the Swedish Nuclear Power Inspectorate. 4th quarter 1985, 12:22444 (R;SE;In Swedish)
Reactor Operation
Quarterly report of the Swedish Nuclear Power Inspectorate. 4th quarter 1985, 12:22444 (R;SE;In Swedish)
BARYON NUMBER 2 RESONANCES

Mass Formulae
Accurate baryon masses from meson masses using potential models and the 1/D expansion, 12:23851 (R;US)
Explicit mass formulas for heavy mesons and baryons, 12:23906 (J;US)
Particle Production
Cosmological baryon production in spontaneous-CP-violating models without strong CP problem, 12:23769 (J;US)
Quark Model
Two-phase model and the Johnson vacuum in one dimension, 12:23932 (J;US)
BASALT
Mineralization
Form and composition of secondary mineralization in fractures in Columbia River basalts, 12:23723 (R;US)
Radioactive Waste Disposal
Probabilistic modeling of radionuclide release at the waste package subsystem boundary of a repository in basalt, 12:22328 (J;US)
Sorptive Properties
Selenate-selenium sorption on a Columbia River basalt (Umtanum basalt, Washington, U.S.A.), 12:22324 (J;NL)
BATS
Population Dynamics
Wintering bats of the upper Snake River Plain: occurrence in lava-tube caves, 12:23469 (J;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERY SEPARATORS
Fabrication
Status of LiAl/FeS cells based on BN separators, 12:22627 (RA;US)
Performance
Status of LiAl/FeS cells based on BN separators, 12:22627 (RA;US)
BAUXITE
Sorptive Properties
Mechanism of surface enrichment and adhesion of coal combustion particulates: First quarterly report, 12:22156 (R;US)
BEAM DYNAMICS
Computer Calculations
Finding beam focus errors automatically, 12:23271 (R;US)
T Codes
Modification of acceleration element in "TRANSPORT", 12:23272 (R;US)
BEAM INJECTION
Computerized Simulation
Computational needs for modelling accelerator components, 12:23284 (BA;NL)
BEAM INJECTION HEATING
Plasma Confinement
Confinement regimes in ohmically and auxiliary heated tokamaks, 12:24198 (RA;FR)
Reviews
Observation of finite-β MHD phenomena in Tokamaks, 12:24200 (RA;FR)
Stability
Observation of finite-β MHD phenomena in Tokamaks, 12:24200 (RA;FR)
BEAM TRANSPORT
Cavity Resonators
Beam response problem in the RFQ, 12:23276 (R;DE)
BEAM-PLASMA SYSTEMS
Beam Injection Heating
Experimental studies of the plasma heating due to beam-induced turbulence, 12:24209 (RA;FR)
Instability Growth Rates
Stimulated Raman scattering of nonlinear space-charge and transverse magnetic waves with a longitudinal wiggler, 12:24271 (J;US)
Ion Acoustic Waves
Soliton resonance and related phenomena in plasmas, 12:24224 (RA;FR)
Plasma Instability
Injection of an electron beam into a plasma and spacecraft charging, 12:23786 (J;US)
Raman Effect
Stimulated Raman scattering of nonlinear space-charge and transverse magnetic waves with a longitudinal wiggler, 12:24271 (J;US)
Simulation
Propagation of a nonrelativistic electron beam in a plasma in a magnetic field, 12:24264 (J;US)

Threshold Energy
Stimulated Raman scattering of nonlinear space-charge and transverse magnetic waves with a longitudinal wiggler, 12:24271 (J;US)
Turbulence
Experiments on Langmuir wave collapse, 12:24223 (RA;FR)
BEEF

BELGIUM
Radioactive Waste Management
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Comparison of spent fuel management options, policies and regulations and applicability to Sweden , 12:22248 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)
Spent Fuel Storage
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Description of spent fuel management activities in each country and applicable laws and regulations , 12:22684 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. National policies and regulations, 12:22249 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)
BELLEFONTE-1 REACTOR
Scottsboro, Alabama
Containment Systems
Containment response and radiological release for a TMLB accident sequence in a large dry containment, 12:22581 (RA;US)
Reactor Safety
Containment response and radiological release for a TMLB accident sequence in a large dry containment, 12:22581 (RA;US)
BELLEFONTE-2 REACTOR
Scottsboro, Alabama
Containment Systems
Containment response and radiological release for a TMLB accident sequence in a large dry containment, 12:22581 (RA;US)
Reactor Safety
Containment response and radiological release for a TMLB accident sequence in a large dry containment, 12:22581 (RA;US)
BENTONITE
Materials Testing
Evaluation of crushed aggregate and sand-bentonite mixtures for application to sealing of the final repository for reactor waste, 12:22315 (R;FI;In Finnish)
Osmosis
Experimental support for a predictive osmotic model of clay membranes, 12:23729 (J;US)
BENZANTHRACENE
Carcinogenesis
Induction and progression of neoplasia in the respiratory tract, 12:22177 (RA;US)
BENZENE
Ionization
Calculated approach to the ionization of low-Z molecules by heavy charged particles, 12:24054 (RA;FR)
Solvent Properties
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)
Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)
BENZOFURANS
Deuteration
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
Mass Spectra
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
BENZOIC ACID
Labelling
Attempts to synthesize tritium labelled 4-benzoylbenzoic acid, 12:23167 (RA;IL)
BENZOPYRENE
Carcinogen Screening
DNA repair studies in mouse germ cells exposed to two carcinogens and two non-carcinogens, 12:23698 (RA;US)
Skin painting studies, 12:23709 (RA;US)
Toxicokinetics of complex mixtures, 12:23710 (RA;US)
Carcinogenesis
Action of tumor initiators and promoters in the Syrian hamster embryo cell transformation assay, 12:23689 (R;US)
Detection of protein perturbations in metabolically activated cells, 12:23706 (RA;US)
Induction and progression of neoplasia in the respiratory tract, 12:22177 (RA;US)
Genetic Effects
DNA repair studies in mouse germ cells exposed to two carcinogens and two non-carcinogens, 12:23698 (RA;US)
Metabolism
Detection of protein perturbations in metabolically activated cells, 12:23706 (RA;US)
Structural effects in reactivity and adduct formation of polycyclic aromatic epoxide and diol epoxide derivatives with DNA: comparison between 1-oxiranylpyrene and benzo[a]pyrenediol expoxide, 12:23713 (J;US)
Structure-Activity Relationships
Structural effects in reactivity and adduct formation of polycyclic aromatic epoxide and diol epoxide derivatives with DNA: comparison between 1-oxiranylpyrene and benzo[a]pyrenediol expoxide, 12:23713 (J;US)
Tissue Distribution
Toxicokinetics of complex mixtures, 12:23710 (RA;US)
Toxicity
Skin painting studies, 12:23709 (RA;US)
BENZOYL RADICALS
Labelling
Attempts to synthesize tritium labelled 4-benzoylbenzoic acid, 12:23167 (RA;IL)
BERKELIUM
Chemical Properties
Chemistry of berkelium: a review, 12:23180 (J;CH)
BERYLLIA
See BERYLLIUM OXIDES
BERYLLIUM
Alpha Reactions
Total cross sections of alpha particle interaction with beryllium and carbon nuclei, 12:23949 (RA;SU;In Russian)
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
Shock Waves
Shock-impedance-match experiments at pressures to 2.5 TPa (25 Mbar), 12:22871 (R;US)
BERYLLIUM 10 TARGET
Proton Reactions
/sup 10/Be(p,n) reaction at $<$ 2 MeV proton energy. A possible ultrasensitive method for /sup 10/Be determination, 12:23951 (R;SU;In Russian)
BERYLLIUM 7
Nuclear Properties
Microscopic description of electromagnetic transitions and photonuclear reactions, 12:23995 (R;DE;In German)
BERYLLIUM 9 TARGET
Deuteron Reactions
Measurement of d(4)-^{9}Be neutron spectrum using a recoil proton spectrometer, 12:23335 (RA;FR)
Spectral neutron fluence and tissue kerma in collimated neutron beams from Be + d, 12:24055 (RA;FR)
Electron Reactions
Search for contribution of quadrupole excitations in the cross section of α-particle electroproduction on /sup 9/Be and /sup 12/C nuclei, 12:23950 (RA;SU;In Russian)

BERYLLIUM ALLOYS
The structure of amorphous Be-Ti-Zr alloys, 12:22874 (R;US)
Annealing
Characterization of rapidly solidified Al-Be-Li and Al-Be ribbons, 12:22821 (R;US)
Crystal Structure
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Electronic Specific Heat
Pressure dependence of the specific heat of heavy-fermion compounds ($CeAl_3$; $CeCu_6$; UBe_{13}; UPt_3), 12:22855 (R;US)
Hardness
Characterization of rapidly solidified Al-Be-Li and Al-Be ribbons, 12:22821 (R;US)
Light Scattering
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Magnetoresistance
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)
Phonons
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Raman Spectra
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Spin
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)
BERYLLIUM MODERATORS
See BERYLLIUM
BERYLLIUM OXIDES
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DOSIMETRY
Surveys
Characteristics of beta detection and dose measurement at Department of Energy facilities, 12:23666 (R;US)
BETA RATIO
Limiting Values
On the tokamak β - values limited by ideal MHD-stability, 12:24201 (RA;FR)
BETHE-SALPETER EQUATION
Eikonal Approximation
Eikonal multiple scattering model within the framework of Feynman's positron theory, 12:23992 (R;XA)
BIBLIS-B REACTOR
Biblis, Hessen, Federal Republic of Germany
Containment Systems
Analysis of severe accidents and estimates of ultimate loading capacity of the steel containment, 12:22594 (RA;US)
Reactor Core Disruption
Analysis of severe accidents and estimates of ultimate loading capacity of the steel containment, 12:22594 (RA;US)
Reactor Safety
Analysis of severe accidents and estimates of ultimate loading capacity of the steel containment, 12:22594 (RA;US)
BINARY ALLOY SYSTEMS
Nuclear Electric Moments
Electric quadrupole interaction in /sup 157/Dy-Gd system, 12:23975 (RA;CS;In Czech)
BINARY MIXTURES
Diffusion
Isotope effects on interdiffusion in blends of normal and deuterated polymers, 12:22968 (J;US)
BIOCHEMICAL ACTIVITY
See BIOCHEMISTRY
BIOCHEMISTRY
Meetings
First joint congress of the South African Biochemical Society, South African Genetics Society and the South African Society for Microbiology at the University of the Witwatersrand, 29 June-4 July 1986, 12:23542 (R;ZA)
BIOGAS
See METHANE
BIOLOGICAL DOSEMETERS
Uses
Experience in the practical application of biological indicators. Appendix 1. The REAC/TS registries status, 12:23671 (BA;DE)
Experience in the practical application of biological indicators. Appendix 2. DOE-REAC/TS radiation accident registries: Serious radiation accidents worldwide. A selected bibliography, 12:23672 (BA;DE)
BIOLOGICAL MATERIALS
Activation Analysis
Instrumental neutron activation analysis of phosphorus in biological materials by Bremsstrahlung measurement, 12:22988 (R;CH)
Cadmium
Instrumental epithermal neutron activation analysis of cadmium in biological matrices, 12:22994 (RA;IL)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOMASS
Gasification
Advanced thermochemical biomass gasification, 12:22356 (R;US)
Biological gasification of renewable resources. Final report, March 1984-December 1985, 12:22370 (R;US)
Pyrolysis
Advanced thermochemical biomass gasification, 12:22356 (R;US)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Operating Cost
Effect of the variation of the level of lactose conversion in an immobilized lactase reactor upon operating costs for the production of Baker's yeast from hydrolyzed permeate obtained from the ultrafiltration of cottage cheese whey, 12:22363 (R;US)
BIOSPHERE
Radionuclide Migration
Concentration ratios for BIOPATH: selection of the soil-to-plant concentration ratio database, 12:23490 (R;CH)
BIPYRIDINES
Electron Transfer
Triplet-mediate photoreduction of viologens by aromatic hydrocarbons: a laser flash-photolysis study, 12:23148 (J;GB)
Photolysis
Triplet-mediate photoreduction of viologens by aromatic hydrocarbons: a laser flash-photolysis study, 12:23148 (J;GB)
Radiolysis
Radiolytic and electrochemical reduction of $Ru(bpz)_3^{2+}$ in aqueous solution. Stability, redox, and acid-base properties of $Ru(bpz)_3^{+1}$, 12:23142 (J;US)
Redox Reactions
Radiolytic and electrochemical reduction of $Ru(bpz)_3^{2+}$ in aqueous solution. Stability, redox, and acid-base properties of $Ru(bpz)_3^{+1}$, 12:23142 (J;US)
Reduction
Radiolytic and electrochemical reduction of $Ru(bpz)_3^{2+}$ in aqueous solution. Stability, redox, and acid-base properties of $Ru(bpz)_3^{+1}$, 12:23142 (J;US)
Triplet-mediate photoreduction of viologens by aromatic hydrocarbons: a laser flash-photolysis study, 12:23148 (J;GB)
BISMUTH TELLURIDES
Electric Conductivity
Non-destructive rapid measurement of dopant distribution in Bi/sub 2/Te/sub 3/ based alloy crystals, 12:22835 (RA;IL)
BITTER SPAR
See DOLOMITE
BITUMENS
Recovery
Design and economic evaluation of an energy-integrated thermal process for recovery of oil from tar sands, 12:22220 (RA;US)

BITUMINOUS COAL
Alkylation
Selective methylation of hydroaromatic C-H sites in coal: The importance of fluorene-like structural units in bituminous coals, 12:22151 (J;US)
Biodegradation
Biodegradation and bioconversion of coals by fungi: Technical report No. 6 for the period December 1, 1986-February 28, 1987, 12:22133 (R;US)
Calorific Value
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Chemical Composition
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Coal liquefaction co-processing, 12:22114 (RA;US)
HRI [Hydrocarbon Research, Inc.] coal/oil co-processing program: A status report, 12:22116 (RA;US)
Selective methylation of hydroaromatic C-H sites in coal: The importance of fluorene-like structural units in bituminous coals, 12:22151 (J;US)
Desulfurization
Use of basic nitrogen to chemically clean coal: Quarterly report No. 2 for the period December 16, 1986 to March 15, 1987, 12:22135 (R;US)
Hydrogenation
Enhanced coal liquefaction by low-severity catalytic reactions: Technical progress report for the period December 1986 to February 1987, 12:22136 (R;US)
Organic vehicle, catalyst, water: Interplay of three aids to coal hydroliquefaction, 12:22107 (RA;US)
Methylation
Selective methylation of hydroaromatic C-H sites in coal: The importance of fluorene-like structural units in bituminous coals, 12:22151 (J;US)
Quantitative Chemical Analysis
Selective methylation of hydroaromatic C-H sites in coal: The importance of fluorene-like structural units in bituminous coals, 12:22151 (J;US)
Solvent Extraction
Techniques for coal gasification: Final report, 12:22129 (R;US)
Swelling
Techniques for coal gasification: Final report, 12:22129 (R;US)
Weathering
Biodegradation and bioconversion of coals by fungi: Technical report No. 6 for the period December 1, 1986-February 28, 1987, 12:22133 (R;US)
BLACK AMERICANS
Training
Historically Black Colleges and Universities Fossil Energy Faculty Research Training Program: FY1986 annual report, 12:24311 (R;US)
Office of Health and Environmental Research Historically Black Colleges and Universities Faculty and Student Research Participation and Training Program: FY1986, 12:24312 (R;US)
BLACK HOLES
Supergravity
Black holes with supercharge, 12:23768 (R;AT)
BLACK SHALES
Geochemistry
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
Geology
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
Permeability
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
Porosity
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
Resource Assessment
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLOOD SERUM
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
Labelling
Radioiodination of serum amyloid protein, 12:23166 (RA;IL)
BLOOD VESSELS
Computerized Tomography
Digital radiography. I: Basic factor and image processing routines, 12:23588 (R;NO;In Norwegian)
BLOWDOWN
Pressure Suppression
Experimental investigations on load reduction in the pressure suppression system of boiling water reactors, 12:22518 (R;DE;In German)
BOHUNICE V-1 REACTOR
Trnava, West Slovakia, Czechoslovakia
Radiation Protection
Study of radiation safety during NPP operation, 12:22505 (RA;XM;In Russian)
Reactor Operation
Study of radiation safety during NPP operation, 12:22505 (RA;XM;In Russian)
BOILERS
See also FLUIDIZED BED BOILERS
REFUSE-FUELED BOILERS
Air Pollution Abatement
Boiler design criteria for dry sorbent SO_2 control with low-NOx burners: new unit applications. Final report, October 1985-March 1986, 12:22435 (R;US)
Fossil and nonfossil fuel-fired industrial boilers - background information for promulgated PM (particulate matter) and NOx (nitrogen oxide) standards. Volume 3. Final environmental impact statement, 12:23248 (R;US)
Fundamental studies of calcium-based sorbents for SO_2 control from coal-fired boilers. Final report, October 1983-September 1984, 12:23252 (R;US)
Corrosion
Corrosion-product transport in a cycling fossil plant: Final report (Cycling operations), 12:22416 (R;US)
Pulverized Fuels
Pilot-scale process evaluation of reburning for in-furnace NOx reduction. Final report, October 1984-October 1985, 12:23249 (R;US)
Water Chemistry
Corrosion-product transport in a cycling fossil plant: Final report (Cycling operations), 12:22416 (R;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLTZMANN COLLISION INTEGRAL
See BOLTZMANN EQUATION
BOLTZMANN EQUATION
Gases
Use of the Boltzmann-equation for calculating the scattering law in gases, 12:24180 (R;AT)
BOLTZMANN TRANSPORT EQUATION
See BOLTZMANN EQUATION
BONE MARROW
Radiation Doses
Neutron and photon fluence-to-dose conversion factors for active marrow of the skeleton, 12:24069 (RA;FR)
BONE MARROW CELLS
Biological Radiation Effects
Micronuclei in bone marrow cells of BALB/c mice irradiated with Cf-252 or Co-60, 12:23678 (J;US)
Genetic Radiation Effects
Cytometrics, 12:23665 (RA;US)
Radiosensitivity
Cytometrics, 12:23665 (RA;US)
BONNER SPHERE DETECTORS
Performance
Neutron occupational exposure and radiological protection, 12:24071 (RA;FR)

Spectra Unfolding
Least squares unfolding and error analysis of Bonner sphere neutron measurements: application to PWR and Little Boy critical assembly measurements, 12:23302 (RA;FR)

BONNER SPHERE SPECTROMETERS
Dose Equivalents
Influence of neutron spectra and fluence response data on the determination of dose equivalent with Bonner spheres, 12:23369 (R;DE)

BONNEVILLE POWER ADMINISTRATION
Rate Structure
Environmental assessment for 1987 BPA wholesale power and transmission rate filing, 12:22688 (R;US)
Research Programs
Energy edge buildings in Oregon, 12:22723 (RA;US)
Overview of the Energy Edge project design upgrading efficiency in commercial construction practice, 12:22719 (RA;US)

BOREHOLES
Pressure Measurement
Comparison of calculated and observed hydrostatic pressure measurements at borehole DC-8 (BWIP), 12:23725 (R;US)
Water Pollution Monitors
Borehole sensing methods for ground-water investigations at hazardous-waste sites. Summary report, 12:23520 (R;US)

BORN-GREEN-YVON EQUATION
See BOLTZMANN EQUATION

BORON
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
Biological Effects
Explorations of mechanisms regulating ectomycorrhizal colonization of boron-fertilized pine: Quarterly report, 8/20/86-3/31/87, 12:22364 (R;US)
Therapeutic Uses
Boron enhancement of high LET Cf-252 brachytherapy in the brain, 12:23604 (J;US)

BORON 10
Therapeutic Uses
Potential for boron neutron capture enhancement of Cf-252 brachytherapy treatment of localized tumors, 12:23591 (J;US)
Uptake
Optimization of epithermal neutron beams for neutron capture therapy, 12:23607 (J;US)

BORON ALLOYS
Chemical Vapor Deposition
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)
Wear Resistance
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)

BORON COMPOUNDS
See also BORON HYDRIDES
BORON NITRIDES
Bond Angle
Neutron diffraction analysis of $[H_3Pt_2(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Bond Lengths
Neutron diffraction analysis of $[H_3Pt_2(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Crystal Structure
Neutron diffraction analysis of $[H_3Pt_2(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)

BORON HYDRIDES
Deposition
Boron hydride polymer coated substrates, 12:22931 (P;US)
Infrared Spectra
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Magnetic Susceptibility
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Moessbauer Effect
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Therapeutic Uses
Boron uptake in tumors, cerebrum and blood from $[^{10}B]Na_4B_{24}H_{22}S_2$, 12:23590 (P;US)
Tissue Distribution
Boron uptake in tumors, cerebrum and blood from $[^{10}B]Na_4B_{24}H_{22}S_2$, 12:23590 (P;US)

BORON NITRIDES
Optical Properties
Optical properties of pyrolytic boron nitride in the energy range 0.05-10 eV, 12:22978 (J;US)

BOROSILICATE GLASS
Deuteration
Studies on deuteration of fused silica. Final report, 15 October 1983-14 October 1986, 12:23091 (R;US)
Leaching
Americium concentrations in solutions contacting americium-doped glass, 12:22329 (J;US)
Transport and reaction kinetics at the glass:solution interface region: Results of repository-oriented leaching experiments, 12:22940 (R;US)
Radioactive Waste Disposal
Americium concentrations in solutions contacting americium-doped glass, 12:22329 (J;US)

BOROSILICATES
See BOROSILICATE GLASS

BOTTOM MESONS
See B MESONS

BOUNDARIES (GRAIN)
See GRAIN BOUNDARIES

BPA
See BONNEVILLE POWER ADMINISTRATION

BRAGG GRAY CHAMBERS
Tissue-Equivalent Materials
Wsub(N) for methane-based TE-gas and carbon dioxide and Wsub(N) and gas-to-wall dose conversion factors for TE/TE cavities, 12:23290 (RA;FR)

BRAIN
See also CEREBRUM
THALAMUS
Biological Radiation Effects
Effect of Cf-252 neutron implantation on dog brain, 12:23603 (J;US)
Chemical Composition
Enzyme regulation, 12:23691 (RA;US)
Gliomas
Boron enhancement of high LET Cf-252 brachytherapy in the brain, 12:23604 (J;US)
Cf-252 brain implantation for malignant glioma: Experience of the University of Kentucky, Lexington, 12:23598 (J;US)
Effect of Cf-252 neutron implantation on dog brain, 12:23603 (J;US)
Neutron brachytherapy for malignant glioma at the University of Kentucky, Lexington, 12:23605 (J;US)
Positron Computed Tomography
$[^{11}C]$clorgyline and $[^{11}C]$-L-deprenyl and their use in measuring functional monoamine oxidase activity in the brain using positron emission tomography, 12:23589 (P;US)

BREASTS
See MAMMARY GLANDS

BREEDING BLANKETS
Neutron Dosimetry
Neutron dosimetry qualification experiments for the Tokamak Fusion Test Reactor Lithium Blanket Module program, 12:24306 (J;US)
Thickness
Minimum thickness lithium-lead blankets, 12:24287 (RA;IL)

BRINES
Argon
Noble gas composition of deep brines from the Palo Duro basin, Texas, 12:22181 (J;US)

Corrosive Effects
Hydrogen absorption and crevice corrosion behavior of Ti Grade 12 during exposure to irradiated brine at 150°C, 12:22860 (R;US)
Helium
Noble gas composition of deep brines from the Palo Duro basin, Texas, 12:22181 (J;US)
Neon
Noble gas composition of deep brines from the Palo Duro basin, Texas, 12:22181 (J;US)
Origin
Noble gas composition of deep brines from the Palo Duro basin, Texas, 12:22181 (J;US)

BROMINE
Antiproton Reactions
Anisotropic and correlated emissions of short range charged particles in anti pAg/Br reactions of 1.4 GeV/c incident momentum observed in photographic emulsions, 12:23967 (R;NO)
Study of the angular distribution of the secondary particles of anti pAg/Br reactions at 1.4 GeV/c incident momentum observed in photographic emulsion, 12:23966 (R;NO)
Proton Reactions
Emission of fast deuterons at the proton interactions with emulsion heavy nuclei, 12:23962 (R;SU;In Russian)

BROMINE 81 REACTIONS
Carbon 12 Reactions
Azimuthal correlations in central collisions of relativistic nuclei, 12:23936 (RA;CS;In Slovak)

BROMINE BROMIDES
See BROMINE

BROMOSULFOPHTHALEIN
Labelling
Liver diagnosis using bromosulfophthalein labelled with iodine radionuclides, 12:23173 (RA;CS;In Czech)

BRONCHOGENIC CARCINOMA
See CARCINOMAS

BUILDING MATERIALS
See also CEMENTS
CONCRETES
Acidification
Model for economic assessment of acid damage to building materials, 12:23478 (BA;US)
Corrosion
Application of a theory for economic assessment of corrosion damage, 12:23482 (BA;US)
Model for economic assessment of acid damage to building materials, 12:23478 (BA;US)
Damage
Application of a theory for economic assessment of corrosion damage, 12:23482 (BA;US)
Radiation Protection
Influence of sealants of /sup 222/Rn emanation rate from building materials, 12:23463 (R;PL)
Service Life
Application of a theory for economic assessment of corrosion damage, 12:23482 (BA;US)
Weathering
Application of a theory for economic assessment of corrosion damage, 12:23482 (BA;US)

BUILDINGS

Science and society test X: Energy conservation, 12:22769 (J;US)
State programs to promote performance contracting of energy projects, 12:22756 (RA;US)
Technical and promotional interface in marketing energy efficiency: Springfield sells heat pumps, 12:22740 (RA;US)
Utility marketing of state conservation loans, 12:22748 (RA;US)
Winning community support for demand-side programs through pilot programs, 12:22738 (RA;US)
Energy Management
Designing building metering experiments and the second law of ELCAP, 12:22772 (BA;US)
Metering
Designing building metering experiments and the second law of ELCAP, 12:22772 (BA;US)
Radiation Monitoring
Influence of source type and air exchange on variations of indoor radon concentration, 12:23465 (R;FI)
Radon in buildings in Hedmark county (Norway), 12:23464 (R;NO;In Norwegian)
Solar Heating Systems
Final solar systems monitoring report, 1985, 12:22386 (R;US)

BUILDINGS (CONTAINMENT)
See CONTAINMENT BUILDINGS

BURNERS
Air Pollution Abatement
Establishment of design criteria for optimum burners for application to heavy-fuel-fired package boilers. Volume 1. Laboratory scale tests. Final report, 1980-1982, 12:23250 (R;US)
Establishment of design criteria for optimum burners for application to heavy-fuel-fired package boilers. Volume 2. Pilot scale tests. Final report, 1980-1982, 12:23251 (R;US)
Air Pollution Control
Pilot-scale process evaluation of reburning for in-furnace NOx reduction. Final report, October 1984-October 1985, 12:23249 (R;US)
Design
Establishment of design criteria for optimum burners for application to heavy-fuel-fired package boilers. Volume 1. Laboratory scale tests. Final report, 1980-1982, 12:23250 (R;US)

Establishment of design criteria for optimum burners for application to heavy-fuel-fired package boilers. Volume 2. Pilot scale tests. Final report, 1980-1982, 12:23251 (R;US)
Hybrid closed bomb-strand burner for very high pressure burning rate measurements, 12:23186 (R;US)
Performance Testing
Evaluation of the PM burner: A low-NO/sub x/ pulverized-coal-firing system for tangentially fired utility boilers: Final report, 12:22417 (R;US)
BURROS
Biological Radiation Effects
Longevity of irradiated burros, 12:23686 (BA;US)
Life Span
Longevity of irradiated burros, 12:23686 (BA;US)
Survival Time
Longevity of irradiated burros, 12:23686 (BA;US)
BUSULFAN
See MYLERAN
BUTANE
Phase Studies
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
Pyrolysis Products
Oil shale quarterly report, October-December 1986, 12:22222 (R;US)
Solubility
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
BUTANOIC ACID
See BUTYRIC ACID
BUTANOLS
Solvent Properties
A microcrystalline growth study of solvent effects in alkoxides by dynamic laser light scattering, 12:23092 (R;US)
BUTYL ALCOHOLS
See BUTANOLS
BUTYRIC ACID
Labelling
Synthesis of tritiated indolyl butyric acid labelled in position 5, 12:23163 (RA;IL)
BUTYRIC ALCOHOLS
See BUTANOLS
BWR TYPE REACTORS
See also BARSEBAECK-1 REACTOR
BARSEBAECK-2 REACTOR
FORSMARK-3 REACTOR
HATCH-2 REACTOR
LEIBSTADT REACTOR
LINGEN REACTOR
PHILIPPSBURG-1 REACTOR
RINGHALS-1 REACTOR
Condensation Chambers
Experimental investigations on load reduction in the pressure suppression system of boiling water reactors, 12:22518 (R;DE;In German)
Containment Buildings
Construction and analysis of a 1/6th-scale concrete containment model, 12:22587 (RA;US)
Secondary containment building performance in severe accidents, 12:22563 (RA;US)
Containment Systems
Failure mechanisms of LWR steel containment buildings subject to severe accident loadings, 12:22592 (RA;US)
Hydrogen burn assessment with the CONTAIN code, 12:22580 (RA;US)
Impact of a hydrogen ignition system on degraded core accident in a Mark III containment, 12:22579 (RA;US)
Leak behavior through EPAs under severe accident conditions, 12:22597 (RA;US)
Leakage potential through mechanical penetrations in a severe accident environment, 12:22596 (RA;US)
Methods for determining integrated leakage rate test duration - case studies, 12:22573 (RA;US)
Preservice and inservice requirements for containment structures - a status report, 12:22570 (RA;US)
Structural analysis of a Japanese BWR MARK-I containment under internal pressure loading, 12:22590 (RA;US)
ECCS
Passive emergency cooling systems for boiling water reactors (PECOS-BWR), 12:22607 (J;US)
Meetings
Proceedings of the second seminar on software development in nuclear energy research, 12:22446 (R;JP;In Japanese)
Meltdown
Further development of KAVERN and code development on gas generation from the containment basement during concrete decomposition, 12:22522 (R;DE;In German)
Reactor Core Disruption
Thermal-hydraulic analysis of light water reactor severe core damage accident, 12:22556 (RA;JP;In Japanese)
Reactor Materials
Long-term embrittlement of cast duplex stainless steels in LWR systems: Semiannual report, October 1985-March 1986, 12:22447 (R;US)
Reactor Safety
Failure mechanisms of LWR steel containment buildings subject to severe accident loadings, 12:22592 (RA;US)
Hydrogen burn assessment with the CONTAIN code, 12:22580 (RA;US)
Impact of a hydrogen ignition system on degraded core accident in a Mark III containment, 12:22579 (RA;US)
Leak behavior through EPAs under severe accident conditions, 12:22597 (RA;US)
Leakage potential through mechanical penetrations in a severe accident environment, 12:22596 (RA;US)
Methods for determining integrated leakage rate test duration - case studies, 12:22573 (RA;US)
Passive emergency cooling systems for boiling water reactors (PECOS-BWR), 12:22607 (J;US)
Secondary containment building performance in severe accidents, 12:22563 (RA;US)
Structural analysis of a Japanese BWR MARK-I containment under internal pressure loading, 12:22590 (RA;US)
Reactor Stability
Limit cycles and bifurcations in nuclear systems, 12:22449 (J;US)
Transition Boiling
Role of software in research of thermal-hydraulic, 12:22445 (RA;JP;In Japanese)

C

C CODES
Electron-impact ionization data for the Fe isonuclear sequence, 12:23797 (R;US)
User's guide for PARTIC II (Version II): A computer code for analyzing the performance of particulate-control devices, 12:22153 (R;US)
CABLES (ELECTRIC)
See ELECTRIC CABLES
CADMIUM
Absorption Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Instrumental epithermal neutron activation analysis of cadmium in biological matrices, 12:22994 (RA;IL)
Diffusion
Diffusion of Cd and Hg in liquid Te, 12:22830 (RA;IL)
Estuaries
Instrumental neutron activation analysis of site-dependent uptake and distribution of trace elements in the saltmarsh plant Aster tripolium from marsh fields in the Schelde estuary, Netherlands, 12:23073 (R;DE;In German)

Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Solvent Properties
Evaluation of the distribution coefficient of silicon in cadmium using radioactive tracers, 12:22996 (RA;IL)
Toxicity
Enzyme regulation, 12:23691 (RA;US)
X-Ray Spectroscopy
Incorporation of trace metals and radionuclides into goethite, 12:23052 (RA;AU)

CADMIUM 114
M1-Transitions
Multipole mixing in the 2/sub 3//sup +/-2/sub 1//sup +/ of /sup 114/Cd, 12:23970 (RA;SU;In Russian)
Vibrational States
Multipole mixing in the 2/sub 3//sup +/-2/sub 1//sup +/ of /sup 114/Cd, 12:23970 (RA;SU;In Russian)

CADMIUM COMPLEXES
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

CADMIUM TELLURIDES
Crystal Structure
Use of DCD for structural properties characterization of substrates and layers of II-VI compounds, 12:22944 (RA;IL)

CALCIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Determination of concentration of some plant elements in reactions with charged particles, 12:23069 (RA;SU;In Russian)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Molluscs
Analysis by PIXE and PIGME of biomineralized tissues in the chiton Clavarizona hirtosa, 12:23042 (RA;AU)
PIXE Analysis
Analysis by PIXE and PIGME of biomineralized tissues in the chiton Clavarizona hirtosa, 12:23042 (RA;AU)
Plages
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
Removal
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)

CALCIUM 40
Nuclear Potential
On the shell potential choice for description of the 1d2s-shell nucleus photodisintegration, 12:24007 (RA;SU;In Russian)
Shell Models
Thermal response of hot nuclei, 12:24045 (BA;US)
Temperature Effects
Thermal response of hot nuclei, 12:24045 (BA;US)

CALCIUM 40 TARGET
Neutron Reactions
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)
Oxygen 16 Reactions
Coupled mass-asymmetry and relative motion coordinates for the collective alpha-particle transfer resonances, 12:23991 (R;XA)

CALCIUM 48 TARGET
Neutron Reactions
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)
Optical Models
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)

CALCIUM COMPOUNDS
See also CALCIUM OXIDES
CALCIUM SULFIDES
NMR Spectra
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
Nuclear Magnetic Resonance
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)

CALCIUM ISOTOPES
See also CALCIUM 40
Isotope Ratio
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)

CALCIUM OXIDES
Sorptive Properties
Evaluation of Glo-Klen additive in desulfurization: Final report, 12:22167 (R;US)

CALCIUM SULFIDES
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)

CALDERAS
Well Drilling
First CSDP [Continental Scientific Drilling Program]/thermal regimes core hole project at Valles Caldera, New Mexico (VC-1): Drilling report, 12:22393 (R;US)

CALIBRATION STANDARDS
1984 EC enquiry into the needs for nuclear reference materials (Z>89), 12:22998 (RA;XA)
Advances in chemical standards for nuclear fuel analysis and safeguards purposes. Report of a consultants' meeting on nuclear reference materials, needs and availability held in Antwerp, Belgium, 8-11 October 1985, 12:22997 (R;XA)
Activation Analysis
Neutron activation analysis of reference materials, 12:23004 (RA;CS;In Czech)

CALIFORNIA
Electric Utilities
Utility marketing of state conservation loans, 12:22748 (RA;US)
Geothermal Resources
Local variations of seismic velocity in the Imperial Valley, California, 12:22390 (J;US)
Oil Fields
Human factors in the management of Becon Construction Company's Heavy Oil Test Station Project. Final report, 12:22188 (R;US)

CALIFORNIUM 252
Biological Radiation Effects
Effect of Cf-252 neutron implantation on dog brain, 12:23603 (J;US)
Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
Historical Aspects
Historical review of californium-252 discovery and development, 12:23592 (J;US)
Ion Sources
Possible /sup 252/Cf utilization in mass spectrometry, 12:24112 (RA;CS;In Slovak)
Microdosimetry
Microdosimetric studies of Cf-252, 12:23606 (J;US)
Neutron Emission
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
RBE
Micronuclei in bone marrow cells of BALB/c mice irradiated with Cf-252 or Co-60, 12:23678 (J;US)
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)

Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
Testis weight loss following low dose rate (LDR) Cf-252, acute Co-60 or LDR Cs-137 irradiation in BALB/c mice, 12:23679 (J;US)
The response of mouse jejunal crypt cells to Cs-137 gamma rays and Cf-252 neutron irradiation, 12:23677 (J;US)
Remote Handling
Facilities and remote afterloading for Cf-252 brachytherapy, 12:23595 (J;US)
Safety
Facilities and remote afterloading for Cf-252 brachytherapy, 12:23595 (J;US)
Spontaneous Fission
Noise equivalent source for frequency domain measurements from the spontaneous fission of ^{252}Cf, 12:23986 (J;US)
Storage Facilities
Facilities and remote afterloading for Cf-252 brachytherapy, 12:23595 (J;US)
Facility design, environmental protection, and planning method for Cf-252 therapy at the Cancer Institute Hospital, Tokyo, 12:23594 (J;US)
Therapeutic Uses
Boron enhancement of high LET Cf-252 brachytherapy in the brain, 12:23604 (J;US)
Cf-252 brain implantation for malignant glioma: Experience of the University of Kentucky, Lexington, 12:23598 (J;US)
Effect of Cf-252 neutron implantation on dog brain, 12:23603 (J;US)
Experience with and potential of Cf-252 therapy for other tumors: Lexington clinical trials, 12:23601 (J;US)
Facilities and remote afterloading for Cf-252 brachytherapy, 12:23595 (J;US)
Facility design, environmental protection, and planning method for Cf-252 therapy at the Cancer Institute Hospital, Tokyo, 12:23594 (J;US)
Historical review of californium-252 discovery and development, 12:23592 (J;US)
Hyperthermia and Cf-252 neutron brachytherapy for bulky surface human neoplasms, 12:23599 (J;US)
Lexington studies of Cf-252 brachytherapy for advanced cervical and uterine cancer, 12:23596 (J;US)
Metronidazole in the treatment of cervical cancer using Cf-252 neutron brachytherapy, 12:23600 (J;US)
Microdosimetric studies of Cf-252, 12:23606 (J;US)
Neutron brachytherapy for malignant glioma at the University of Kentucky, Lexington, 12:23605 (J;US)
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
Potential for boron neutron capture enhancement of Cf-252 brachytherapy treatment of localized tumors, 12:23591 (J;US)
Treatment of bulky stage IB and IIB cervical cancers with outpatient neutron brachytherapy, external pelvic radiation and extrafascial hysterectomy, 12:23597 (J;US)
Tumor and normal tissue effects and therapeutic gain factor for Cf-252, 12:23593 (J;US)

CALIFORNIUM ARSENIDES
Magnetic Susceptibility
Magnetic susceptibility of CfN, CfAs and CfSb, 12:22934 (J;CH)

CALIFORNIUM NITRIDES
Magnetic Susceptibility
Magnetic susceptibility of CfN, CfAs and CfSb, 12:22934 (J;CH)

CALIFORNIUM OXIDES
Magnetic Susceptibility
Magnetic susceptibility of californium oxides, 12:22932 (J;CH)

CALORIMETERS (PARTICLE)
See SHOWER COUNTERS

CALORIMETRIC DOSEMETERS
Tissue-Equivalent Materials
Tissue-equivalent calorimeter for direct calibration of ionization chambers in neutron beams, 12:23344 (RA;FR;In French)

CAM
See COMPUTER-AIDED MANUFACTURING

CAMAC SYSTEM
Computer Application to Measurement And Control.
Computerized Control Systems
An enhanced 8086-based CAMAC crate controller, 12:23282 (J;US)
Readout Systems
Fast ADC scanner for multiparameter nuclear physics experiments, 12:23941 (R;NO)

CANADA
See also ONTARIO
Radioactive Waste Management
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Comparison of spent fuel management options, policies and regulations and applicability to Sweden , 12:22248 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)
Spent Fuel Storage
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Description of spent fuel management activities in each country and applicable laws and regulations , 12:22684 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. National policies and regulations, 12:22249 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)

CANCER
See NEOPLASMS

CANDIDA
Cultivation
Microbial coal liquefaction, 12:22112 (RA;US)

CANDU TYPE REACTORS
See also DARLINGTON-1 REACTOR
DARLINGTON-2 REACTOR
DARLINGTON-3 REACTOR
DARLINGTON-4 REACTOR
Containment Systems
Effect of high temperature on integrity of concrete containment structures, 12:22584 (RA;US)
Structural reliability of containment structures - CANDU nuclear power plants, 12:22561 (RA;US)
Reactor Safety
Effect of high temperature on integrity of concrete containment structures, 12:22584 (RA;US)
Risk Assessment
Structural reliability of containment structures - CANDU nuclear power plants, 12:22561 (RA;US)

CANIS LATRANS

CARBOHYDRATES
Translocation
Explorations of mechanisms regulating ectomycorrhizal colonization of boron-fertilized pine: Quarterly report, 8/20/86-3/31/87, 12:22364 (R;US)

CARBON
See also ACTIVATED CARBON
GRAPHITE
Alpha Reactions
Total cross sections of alpha particle interaction with beryllium and carbon nuclei, 12:23949 (RA;SU;In Russian)
Catalytic Effects
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)

Charged-Particle Transport
Low energy electron attenuation length studies in thin amorphous carbon films, 12:24061 (J;NL)
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
Infrared Spectra
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Neutron Reactions
Gamma ray production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb at 90 deg. , 12:23957 (R;XA)
Nitridation
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Nuclear Reaction Analysis
Method of nuclear microanalysis of carbon based on sup(13)C(d,t)sup(12)C reaction, 12:23068 (RA;SU;In Russian)
Oxidation
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Performance
Improved response of carbon-paste electrodes for electrochemical detection in flow systems by pretreatment with surfactants, 12:23141 (J;US)
Shock Waves
Shock-impedance-match experiments at pressures to 2.5 TPa (25 Mbar), 12:22871 (R;US)
Sorptive Properties
Improved response of carbon-paste electrodes for electrochemical detection in flow systems by pretreatment with surfactants, 12:23141 (J;US)
Surface Area
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Surface Cleaning
Improved response of carbon-paste electrodes for electrochemical detection in flow systems by pretreatment with surfactants, 12:23141 (J;US)
Surface Treatments
Improved response of carbon-paste electrodes for electrochemical detection in flow systems by pretreatment with surfactants, 12:23141 (J;US)

CARBON 12
Elastic Scattering
Carbon depth profiling using resonant elastic alpha scattering, 12:23039 (RA;AU)
Isotope Effects
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)

CARBON 12 REACTIONS
Heavy Ion Fusion Reactions
Study of the fission dynamics of hot atomic nuclei by means of the neutron emission, 12:23968 (R;DE;In German)
Inclusive Interactions
Pion and photon bremsstrahlung in a heavy ion reaction model with friction, 12:23989 (R;DE)
Study of peripheral heavy ion reactions at 84 MeV/nucleon, 12:23960 (R;DE;In German)
Quasi-Fission
Study of the fission dynamics of hot atomic nuclei by means of the neutron emission, 12:23968 (R;DE;In German)
Total Cross Sections
Real and imaginary part of the potential between two nuclei and the realistic nucleon-nucleon interaction, 12:23996 (R;DE;In German)

CARBON 12 TARGET
Carbon 12 Reactions
Pion and photon bremsstrahlung in a heavy ion reaction model with friction, 12:23989 (R;DE)
Real and imaginary part of the potential between two nuclei and the realistic nucleon-nucleon interaction, 12:23996 (R;DE;In German)
Deuteron Reactions
Proton polarization in /sup 2/H(d,p-vector)/sup 3/H and /sup 12/C(d,p-vector/sub 0/)/sup 13/C reactions at low energies, 12:23944 (RA;CS;In Czech)
Study of production and properties of neutrons in nucleus-nucleus collisions at energies up to 5 GeV/nucleon, 12:23935 (RA;CS;In Czech)
Electron Reactions
Search for contribution of quadrupole excitations in the cross section of α-particle electroproduction on /sup 9/Be and /sup 12/C nuclei, 12:23950 (RA;SU;In Russian)
Neutron Reactions
Charm particle production at Serpukhov accelerator, 12:23831 (RA;CS;In Czech)
Diffractive dissociation of neutrons into ΛK/sup 0/ on carbon at 45 GeV, 12:23834 (RA;CS;In Slovak)
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)
Proton Reactions
Properties of pC-interactions at Psub(p)=10 GeV/c with the emission of cumulative pions and protons, 12:23835 (R;SU;In Russian)

CARBON 13
Isotope Effects
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)
Labelling
Combination of inadequate and carbon-13 saturation for spectral simplification, 12:23088 (J;GB)

CARBON 13 TARGET
Pion Minus Reactions
Inelastic pion scattering by ^{13}C at low energies, 12:23952 (R;US)
Pion Plus Reactions
Inelastic pion scattering by ^{13}C at low energies, 12:23952 (R;US)

CARBON 14
Radiation Monitoring
Discontinuous method of /sup 3/H, /sup 14/C, /sup 85/Kr and /sup 133/Xe activity measurement in nuclear power plant stack, 12:23360 (RA;CS;In Slovak)
Radiochemistry
Preparation of C-labelled aflatoxins with high specific activity and yield, 12:23175 (RA;ZA)

CARBON DIOXIDE
Adsorption
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
Desorption
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
Environmental Impacts
A review of national and international activities on modeling the effects of increased CO_2 concentrations on the simulation of regional crop production: (A report on linkage between climate and crop models): Progress report, 12:23428 (R;US)
Solubility
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
Solvent Properties
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)

CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Reservoir characterization for the CO_2 enhanced oil recovery process: Annual report, 12:22186 (R;US)

CARBON MONOXIDE
Chemical Reactions
Thorium oxide: new catalyst for methanol, isobutanol, and light hydrocarbon production from carbon monoxide and hydrogen, 12:22358 (J;NL)

Methanation
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)

CARBON STEELS
See also STEEL-ASTM-A106
Corrosion
Assessment of carbon steel overpacks for radioactive waste disposal, 12:22290 (R;FR)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Bond Angle
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)
Bond Lengths
Iron-sulfur bond lengths in ferrous-CO heme complexes as a function of sulfur donor type, 12:23120 (J;US)
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)
Synthesis, characterization, and electrochemical studies of iron, cobalt, and nickel complexes of polyphosphine ligands, 12:23117 (J;US)
Crystal Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)
Molecular Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)

CARBOXYLASE
Biological Functions
Molecular mutagenesis and protein engineering, 12:23543 (RA;US)
Protein chemistry and enzyme mechanisms, 12:23544 (RA;US)

CARBOXYLIC ACIDS
See also AMINO ACIDS
KETO ACIDS
Chemical Reaction Yield
Ruthenium tetroxide oxidation of low-rank coals, 12:22142 (RA;US)

CARCINOGENESIS
Genetics
Molecular genetics of carcinogenesis, 12:23569 (RA;US)
Mathematical Models
Status of phenomenological modeling, 12:23667 (R;US)
Research Programs
Environmental mutagen, carcinogen, and teratogen information program, 12:23711 (RA;US)
Radiation carcinogenesis, 12:23664 (RA;US)

CARCINOMAS
Diagnosis
Monoclonal antibodies for diagnosis and therapy, 12:23551 (RA;US)
Neutron Therapy
Hyperthermia and Cf-252 neutron brachytherapy for bulky surface human neoplasms, 12:23599 (J;US)
Lexington studies of Cf-252 brachytherapy for advanced cervical and uterine cancer, 12:23596 (J;US)

CARPOOLING
See also VANPOOLING
Socio-Economic Factors
Personal, social, psychological, and other factors in ridesharing programs. Final report, September 1982-January 1984, 12:22778 (R;US)

CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY

CASKS
See also SPENT FUEL CASKS
Design
Validation of elastic-plastic computer analyses for use in nuclear waste shipping cask design, 12:23196 (R;US)

CAST IRON
Physical Radiation Effects
Wear of laser processes cast iron, 12:22919 (BA;US)

CATALYST SUPPORTS
Comparative Evaluations
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)
Infrared Spectra
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Nitridation
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Oxidation
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Surface Area
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)

CATALYSTS
Aging
Kinetics of hydrogenation using aged catalysts (Shell 324M NiMo), 12:22099 (RA;US)
Chemical Preparation
Catalysts via hydrous metal oxide ion exchangers (Ni, Mo and Pd hydrous titanates), 12:22101 (RA;US)
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Circulating Systems
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
Comparative Evaluations
Catalysts via hydrous metal oxide ion exchangers (Ni, Mo and Pd hydrous titanates), 12:22101 (RA;US)
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Deactivation
Composition of recycle oil from HRI's [Hydrocarbon Research, Inc.] catalytic two-stage liquefaction process, 12:22096 (RA;US)
Formation of carbonaceous deposits on coal liquefaction catalysts (Shell 324M catalyst with 12.4 wt % Mo, 2.8 wt % Ni and 2.7 wt % P on an alumina support), 12:22093 (RA;US)
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)
Impregnation
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
PH Value
Improved catalysts for coal liquefaction, 12:22103 (RA;US)
Photoelectron Spectroscopy
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)
Promoters
Improved catalysts for coal liquefaction, 12:22103 (RA;US)
Structural Chemical Analysis
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)
Sulfidation
Improved catalysts for coal liquefaction, 12:22103 (RA;US)
Kinetics of hydrogenation using aged catalysts (Shell 324M NiMo), 12:22099 (RA;US)
Surface Area
Catalysts via hydrous metal oxide ion exchangers (Ni, Mo and Pd hydrous titanates), 12:22101 (RA;US)

Surface Properties
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)
CATAPHORESIS

CELLULASE
Code number 3.2.1.4.
Enzyme Activity
Versatile assay for total cellulase activity using radiolabelled bacterial cellulose, 12:22368 (RA;ZA)
CELLULASES
See CELLULASE
CEMENTS
See also PORTLAND CEMENT
Permeability
Experimental assessment of the sealing effectiveness of rock fracture grouting, 12:22302 (R;US)
CENTRIFUGE ENRICHMENT PLANTS
Inspection
Go-no go monitors, 12:22335 (RA;AU)
CERAMICS
Ceramic Technology Newsletter: No. 13, 12:22928 (R;US)
Grain Boundaries
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
Ion Implantation
Ion implantation and fracture toughness of ceramics, 12:22926 (RA;AU)
Materials Testing
Thermal shock testing of ceramics with pulsed laser irradiation, 12:24294 (R;DE)
Porosity
Applications of neutron scattering to problems in materials science, 12:22935 (J;US)
Thermal Shock
Thermal shock testing of ceramics with pulsed laser irradiation, 12:24294 (R;DE)
CEREALS
Large-scale ethanol production from corn and grain sorghum and improving conversion technology, 12:22359 (J;NL)
CEREBRAL CORTEX
Physiology
Patterns of brain activity in normals and schizophrenics with positron emission tomography, 12:23611 (J;US)
CEREBRUM
See also CEREBRAL CORTEX
Neoplasms
Boron uptake in tumors, cerebrum and blood from [^{10}B]$Na_4B_{24}H_{22}S_2$, 12:23590 (P;US)
Pathological Changes
Patterns of brain activity in normals and schizophrenics with positron emission tomography, 12:23611 (J;US)
Physiology
Patterns of brain activity in normals and schizophrenics with positron emission tomography, 12:23611 (J;US)
Positron Computed Tomography
Patterns of brain activity in normals and schizophrenics with positron emission tomography, 12:23611 (J;US)
CERIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Epitaxy
Epitaxial film growth study of single crystal V/Ce prepared by molecular-beam epitaxy on sapphire, 12:22822 (R;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Membrane Transport
Extraction of cerium(III) by di-2-ethylhexylphosphoric acid and tri-n-octylphosphine oxide in liquid membrane emulsion system, 12:23024 (RA;CS)
Separation Processes
Extraction of cerium(III) by di-2-ethylhexylphosphoric acid and tri-n-octylphosphine oxide in liquid membrane emulsion system, 12:23024 (RA;CS)
CERIUM 141
Retention
Mucociliary clearance and particle retention in the maxillary and ethmoid turbinate regions of beagle dogs, 12:23680 (J;US)
CERIUM ALLOYS
See also CERIUM BASE ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Electric Conductivity
Coherence in $CePd_3$, 12:22856 (R;US)
Electronic Specific Heat
Pressure dependence of the specific heat of heavy-fermion compounds ($CeAl_3$; $CeCu_6$; UBe_{13}; UPt_3), 12:22855 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Magnetic Susceptibility
Coherence in $CePd_3$, 12:22856 (R;US)
Transition from Kondo-lattice to intermediate valence state in Ce(Cusub(1-x)Nisub(x))sub(5) compounds, 12:22844 (R;SU)
Specific Heat
Transition from Kondo-lattice to intermediate valence state in Ce(Cusub(1-x)Nisub(x))sub(5) compounds, 12:22844 (R;SU)
CERIUM BASE ALLOYS
Phase Transformations
Pressure dependence of the resistivity of Ce_3Al, 12:22857 (R;US)
CERIUM BORIDES
Electronic Structure
Valence state of Ce and the magnetism in $CeRh_3B_2$, 12:22971 (J;US)
Magnetism
Valence state of Ce and the magnetism in $CeRh_3B_2$, 12:22971 (J;US)
CERIUM COMPOUNDS
See also CERIUM BORIDES
Electronic Structure
Hybridization between 4f and conduction electrons and saturation of mixed valence in cerium-based systems, 12:22969 (J;US)
CERN ISR
CERN Intersecting Storage Rings.
Research Programs
Selected results from light ion experiments at the CERN ISR, 12:23839 (R;SE)

CESIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange Chromatography
Development of partitioning method: dynamic adsorption characteristics of titanic acid and zeolite mixed column for Sr and Cs ions, 12:22297 (R;JP;In Japanese)
Separation Processes
Membrane extraction for preconcentration of radionuclides, 12:23026 (RA;CS)
CESIUM 134
Adsorption
Sorption of radionuclides on natural materials, 12:22294 (RA;CS)
CESIUM 137
Adsorbents
Studies on new titanium ferrocyanide sorbents for radiocaesium removal from primary coolants of pressurized water reactors, 12:23103 (RA;CS)
Adsorption
Sorption of radionuclides on natural materials, 12:22294 (RA;CS)
Lapps
Measurements of cesium-137 in Norwegian Lapps from the Kautokeino area during the Spring 1986. Measurements of cesium-137 in reindeer meat from the Kautokeino reindeer slaughterhouse, 12:23669 (R;NO;In Norwegian)
Natural Radioactivity
Application of environmental Cs-137 techniques to problems of sediment redistribution Sungai Lui Representative Basin, Selangor, Malaysia, 12:23418 (R;MY)
Radiation Monitoring
Measurements of cesium-137 in Norwegian Lapps from the Kautokeino area during the Spring 1986. Measurements of cesium-137 in reindeer meat from the Kautokeino reindeer slaughterhouse, 12:23669 (R;NO;In Norwegian)
RBE
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)
Testis weight loss following low dose rate (LDR) Cf-252, acute Co-60 or LDR Cs-137 irradiation in BALB/c mice, 12:23679 (J;US)
Solvent Extraction
Separation of fission products from high level radioactive wastes by dicarbolide extraction, 12:22293 (RA;CS;In Czech)
Therapeutic Uses
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
CESIUM CHLORIDES
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
CESIUM HYDROXIDES
Catalytic Effects
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
CESR STORAGE RING
Radiation Detectors
Construction of a high precision vertex detector to be installed in the CLEO experiment at the Cornell Electron Storage Ring: Final report, 12:23288 (R;US)
CHALKS
See LIMESTONE
CHARCOAL
Sorptive Properties
Evaluation of charcoal sorbents for helium cryopumping in fusion reactors, 12:24304 (J;US)
CHARGED-PARTICLE ACTIVATION

[Surface studies at the NSLS]: Technical progress report, 12:22828 (R;US)

CHERNOBYLSK-4 REACTOR
Fallout
Air radioactivity at selected stations in Norway after the Chernobyl reactor accident, 12:22559 (R;NO)
Measurement of the $^{129}I/^{131}I$ ratio in Chernobyl fallout, 12:23451 (R;US)
Radiation Monitoring
Air radioactivity at selected stations in Norway after the Chernobyl reactor accident, 12:22559 (R;NO)
Reactor Accidents
Chernobyl accident. Course of events - health hazards - consequences, 12:22520 (R;NO;In Norwegian)
Evaluation of the Chernobyl reactor accident (as of May 30, 1986), 12:22523 (R;DE;In German)
Reactor accident at Chernobyl, U.S.S.R. Radiation measurements in Denmark, 12:23458 (R;DK)
Reactor accident at Chernobyl, U.S.S.R. Radiation measurements in Denmark. 2. report, 12:23459 (R;DK)
Reactor accident at Chernobyl, U.S.S.R. Radiation measurements in Denmark. 3. report, 12:23460 (R;DK)
Report of the Federal Ministry for the Environment, Protection of Nature and Reactor Safety, on the reactor accident of Chernobyl, its repercussions, and precautions taken or to be taken - including addenda, 12:22527 (R;DE;In German)
What has happened to the radiation environment after the Chernobyl accident?, 12:22675 (RA;SE;In Swedish)
CHI RESONANCES
Particle Decay
Peculiarities of the quark-gluon mechanism of the formation of C-even heavy quarkonia in hadron collisions, 12:23856 (R;SU)
Particle Production
Peculiarities of the quark-gluon mechanism of the formation of C-even heavy quarkonia in hadron collisions, 12:23856 (R;SU)
CHICAGO
Hazardous Materials
Southeast Chicago study: an assessment of environmental pollution and public-health impacts. Final report, 12:22666 (R;US)
Industrial Wastes
Feasibility of a central recovery facility for the metal finishing industry in Cook County, 12:22791 (R;US)
Public Health
Southeast Chicago study: an assessment of environmental pollution and public-health impacts. Final report, 12:22666 (R;US)
CHINA
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Rivers
Elemental composition of suspended particles from the Yellow and Yangtze Rivers, 12:23525 (J;US)
CHINESE HAMSTER

CHLORAMPHENICOL
Radioimmunoassay
Radioimmunoassay of chloramphenicol using chloramphenicol-succinyl-amido-tyramine-[/sup 3/H] as radiotracer, 12:23619 (RA;IL)
CHLORINATED AROMATIC HYDROCARBONS
Biological Effects
Occurrence of chlorinated aromatic compounds in filter deposits of an incinerator plant for radioactive waste. Pt. 2. Biological effect of chlorinated polycyclic aromatic compounds, 12:22305 (R;AT;In German)
Chemical Analysis
Occurrence of chlorinated aromatic compounds in filter deposits of an incinerator plant for radioactive waste. Pt. 1. Analysis of chlorinated polycyclic aromatic compounds, 12:23075 (R;AT;In German)
Occurrence of chlorinated aromatic compounds in filter deposits of an incinerator plant for radioactive waste. Pt. 3. Determination of tetrachlorinated dibenzo-p-dioxines, 12:23076 (R;AT;In German)
Land Pollution
Remediation of PCB (polychlorinated biphenyl) contamination, Woodbridge Research Facility, Woodbridge, Virginia. Final report, 27 September 1984-30 April 1986, 12:23472 (R;US)
Public Information
An examination of models of issue development: Environmental scanning using on-line databases: Final report (Acid rain, PCBs, thermal pollution, ground water pollution), 12:22694 (R;US)
Synthesis
Polychlorinated dibenzofurans (PCDF) and polychlorinated dibenzo-p-dioxins (PCDD) in utility transformers and capacitors: Volume 3, Final report, 12:23095 (R;US)
CHLORINE
Air Pollution Control
Monitoring the fate of chlorine from MSW sampling through combustion, 12:22412 (RA;US)
Removal
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
CHLORINE CHLORIDES
See CHLORINE
CHLORINE IODIDES

Dynamic Function Studies
Nucleosome and chromatin biophysics, 12:23549 (RA;US)

Molecular Biology
Fast turnover of core histones in active chromatin, 12:23539 (RA;ZA)
Molecular Structure
Changes in histone H1 content and chromatin structure of cells blocked in early S phase by 5-fluorodeoxyuridine and aphidicolin, 12:23555 (J;US)
Nucleosome and chromatin biophysics, 12:23549 (RA;US)

CHROMIUM
Absorption Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Chemical Reaction Kinetics
Oxidation behavior of chromium and a chromium-yttrium binary alloy, 12:22904 (BA;US)
Corrosion Products
Measured and calculated stresses in Cr/sub 2/O/sub 3/ scales and their Cr substrates, 12:22906 (BA;US)
Oxidation behavior of chromium and a chromium-yttrium binary alloy, 12:22904 (BA;US)
Distribution
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Microstructure
Characterization of Al and Al-Cr-Al thin films, 12:22823 (R;US)
Oxidation
Measured and calculated stresses in Cr/sub 2/O/sub 3/ scales and their Cr substrates, 12:22906 (BA;US)
Oxidation behavior of chromium and a chromium-yttrium binary alloy, 12:22904 (BA;US)
Scaling
Measured and calculated stresses in Cr/sub 2/O/sub 3/ scales and their Cr substrates, 12:22906 (BA;US)
Superconductivity
Characterization of Al and Al-Cr-Al thin films, 12:22823 (R;US)
X-Ray Fluorescence Analysis
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)

CHROMIUM ALLOYS

CHROMOSOMES
Biological Functions
Chromosome chemistry, 12:23548 (RA;US)

Genetic Mapping
Effect of dilute-suppressor on combinations of dilute-lethal mutations, 12:23563 (RA;US)
Exploration of methods to localize DNA sequences missing from c-locus deletions, 12:23659 (RA;US)
Genetic mapping in mouse Chromosome 7, using meiotic recombination data for RFLPs; comparison with human 11p, 12:23564 (RA;US)
Molecular genetic analysis of regions of the murine genome associated with radiation-induced mutations, 12:23660 (RA;US)
Structural and functional analyses of the dilute-shortear region: genetic and molecular studies, 12:23658 (RA;US)
Molecular Biology
Some answers to the mechanism of C-banding, 12:23559 (RA;ZA)
Molecular Structure
Chromosome chemistry, 12:23548 (RA;US)
Strand Breaks
Excessive nonhomologous synapsis in T(X;16)16H heterozygous male mice suggest a trans-chromosomal effect of G-dark breaks, 12:23567 (RA;US)

CHRYSENE
Biochemical Reaction Kinetics
Reaction mechanisms of trans-1,2-dihydroxy-anti-3,4-epoxy-1,2,3,4-tetrahydo-5-methylchrysene with DNA in aqueous solutions, 12:23712 (J;GB)
Hydrolysis
Reaction mechanisms of trans-1,2-dihydroxy-anti-3,4-epoxy-1,2,3,4-tetrahydo-5-methylchrysene with DNA in aqueous solutions, 12:23712 (J;GB)

CHUKCHI SEA
Icebergs
Statistical description of the summertime ice edge in the Chukchi Sea: Final report, Task 2, 12:23742 (R;US)

CIRCUITS (ELECTRONIC)
See ELECTRONIC CIRCUITS

CISTRONS
See GENES

CLAYS
See also BENTONITE
Geochemistry
Determination of geochemical characters of insterstitial waters of pleistocene Italian clay formations, 12:23527 (R;FR;In Italian)
Radioactive Waste Disposal
Effects of natural heating on a clay formation, 12:22279 (R;FR;In Italian)
Thermodynamic Properties
Thermal behaviour of clay formations, 12:22277 (R;FR;In Italian)

CLIMATE MODELS
Reviews
A review of national and international activities on modeling the effects of increased CO_2 concentrations on the simulation of regional crop production: (A report on linkage between climate and crop models): Progress report, 12:23428 (R;US)

CLIMATES
Forecasting
Climate predictions, regions, and resources, 12:23426 (R;US)
Indicators
Icelandic sea-ice record, 12:23516 (J;GB)

CLINTON P. ANDERSON MESON PHYSICS FACILIT
See LAMPF LINAC

CLOSTRIDIUM
See also CLOSTRIDIUM ACETOBUTYLICUM
Growth
Anaerobic bacterial dissolution of lead oxide, 12:22161 (J;DE)

CLOSTRIDIUM ACETOBUTYLICUM
Cell Differentiation
Genetics of anaerobic organisms, 12:23562 (RA;US)
Growth
Genetics of anaerobic organisms, 12:23562 (RA;US)

CLOUDS
Limited to clouds in the earth atmosphere; for interstellar clouds see COSMIC DUST or COSMIC GASES.
Mathematical Models
A simple theory of cloud spreading at ranges from 1-2000 km, 12:23416 (R;US)
On the simulation of convective structures, 12:23414 (R;DE)
Variations
Global distribution of total cloud cover and cloud type amounts over land, 12:23412 (R;US)

CLUSTERS (SOLID)
See SOLID CLUSTERS

CLUSTERS (STAR)
See STAR CLUSTERS

CO2 FLOODING
See CARBON DIOXIDE INJECTION

COAL
See also SUBBITUMINOUS COAL
Activation Analysis
Use of neutron activation analysis to measure the variation in trace element concentrations in a coal seam, 12:23059 (RA;AU)
Agglomeration
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
Alkylation
The contrasting reduction, alkylation and reductive alkylation of low and high rank bituminous coal, 12:22143 (RA;US)
Ashes
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Evaluation of Glo-Klen additive in desulfurization: Final report, 12:22167 (R;US)
Chemical Composition
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Coal samples available from the premium coal sample program, 12:22152 (J;US)
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Status of Lummus Crest Inc. research and development program on coal liquefaction co-processing, 12:22113 (RA;US)
Chemical Properties
Coal samples available from the premium coal sample program, 12:22152 (J;US)
Chemical Reaction Kinetics
Macromolecular structure and coal reactivity, 12:22141 (RA;US)
Chemical Reactions
Electron transfer and radical-cation reactions of coal model compounds. Annual report, April 1985-March 1986, 12:22150 (R;US)
Cleaning
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 6, December 1, 1986-February 28, 1987, 12:22086 (R;US)
Use of basic nitrogen to chemically clean coal: Quarterly report No. 2 for the period December 16, 1986 to March 15, 1987, 12:22135 (R;US)
Combustion
Cofiring of RDF and coal in a cyclone utility boiler: an industry update, 12:22405 (RA;US)
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Controlling pollutant emissions through the supplemental use of natural gas: Phase 1 - bench-scale screening studies. Phase 2 - flow-field evaluation and mixing. Topical report, April 1984-July 1985, 12:22437 (R;US)
Economic assessment of coal burning diesel locomotives: Topical report, 12:22171 (R;US)

Evaluation of the PM burner: A low-NO/sub x/ pulverized-coal-firing system for tangentially fired utility boilers: Final report, 12:22417 (R;US)
Evaluation of Glo-Klen additive in desulfurization: Final report, 12:22167 (R;US)
Fluidized-bed boiler assessment for Navy applications. Final report, October 1983-September 1985, 12:23247 (R;US)
Guidelines for cofiring refuse-derived fuel in electric utility boilers, 12:22408 (RA;US)
RDFCOAL: RDF cofiring boiler performance model, 12:22409 (RA;US)
Refuse derived fuel and coal: the Lakeland experience, 12:22404 (RA;US)
Trash to electricity: an environmental plus, 12:22400 (RA;US)

Comminution
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)

Comparative Evaluations
Effect of various drying methods and levels on the conversion of low-rank coals, 12:22119 (RA;US)
Evaluation of the PM burner: A low-NO/sub x/ pulverized-coal-firing system for tangentially fired utility boilers: Final report, 12:22417 (R;US)
Status of Lummus Crest Inc. research and development program on coal liquefaction co-processing, 12:22113 (RA;US)
The contrasting reduction, alkylation and reductive alkylation of low and high rank bituminous coal, 12:22143 (RA;US)

Consumption Rates
Coal data: A reference (Often by state; data for many years in most cases), 12:22083 (R;US)

Deashing
Apparatus for magnetic separation of paramagnetic and diamagnetic material, 12:22087 (P;US)

Desulfurization
Apparatus for magnetic separation of paramagnetic and diamagnetic material, 12:22087 (P;US)

Dissolution
Low severity coal liquefaction using liquid clathrates, 12:22094 (RA;US)

Drying
Effect of various drying methods and levels on the conversion of low-rank coals, 12:22119 (RA;US)
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
Pretreatment techniques for coal gasification. Fifth quarterly report, October 1-December 31, 1985 (Raw and pretreated coal in helium and steam), 12:22126 (R;US)
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)

Electron Spin Resonance
Structural mobility in coal dissolution, 12:22106 (RA;US)

Flotation
Characterization of coal surfaces: Final report, 12:22146 (R;US)

Fluidized-Bed Combustion
Emission factors for several toxic air pollutants from fluidized-bed combustion of coal, 12:22175 (R;US)

Grinding
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)

Hydrogenation
Low severity coal liquefaction using liquid clathrates, 12:22094 (RA;US)

Information
Coal data: A reference (Often by state; data for many years in most cases), 12:22083 (R;US)

Infrared Spectra
Pretreatment techniques for coal gasification. Fifth quarterly report, October 1-December 31, 1985 (Raw and pretreated coal in helium and steam), 12:22126 (R;US)

Market
Annual energy outlook, 1986, 12:22681 (R;US)

Mechanical Properties
Structural mobility in coal dissolution, 12:22106 (RA;US)

Moisture
Neutron and gamma-ray transmission technique for the on-line determination of moisture in coal and coke, 12:23056 (RA;AU)

Molecular Structure
Macromolecular structure and coal reactivity, 12:22141 (RA;US)
The contrasting reduction, alkylation and reductive alkylation of low and high rank bituminous coal, 12:22143 (RA;US)

Nuclear Magnetic Resonance
Structural mobility in coal dissolution, 12:22106 (RA;US)

Oxidation
Characterization of coal surfaces: Final report, 12:22146 (R;US)

Petrography
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)

Prices
Coal data: A reference (Often by state; data for many years in most cases), 12:22083 (R;US)
Economic assessment of coal burning diesel locomotives: Topical report, 12:22171 (R;US)

Processing
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Coal liquefaction co-processing, 12:22114 (RA;US)
EPRI [Electric Power Research Institute] coal liquefaction program, 12:22117 (RA;US)
HRI [Hydrocarbon Research, Inc.] coal/oil co-processing program: A status report, 12:22116 (RA;US)
Status of Lummus Crest Inc. research and development program on coal liquefaction co-processing, 12:22113 (RA;US)

Production
Coal data: A reference (Often by state; data for many years in most cases), 12:22083 (R;US)
Illinois mineral industry in 1984 and review of preliminary mineral production data for 1985. Illinois mineral notes, 12:22671 (R;US)

Pyrolysis
Macromolecular structure and coal reactivity, 12:22141 (RA;US)
Pretreatment techniques for coal gasification. Fifth quarterly report, October 1-December 31, 1985 (Raw and pretreated coal in helium and steam), 12:22126 (R;US)
Pretreatment techniques for coal gasification. Sixth quarterly report, January 1-March 31, 1986, 12:22127 (R;US)
Pretreatment techniques for coal gasification. Eighth quarterly report, July 1-September 30, 1986 (Pretreatment of coal in steam to increase light liquid yields), 12:22128 (R;US)

Reduction
The contrasting reduction, alkylation and reductive alkylation of low and high rank bituminous coal, 12:22143 (RA;US)

Sample Preparation
Coal samples available from the premium coal sample program, 12:22152 (J;US)

Sampling
Coal samples available from the premium coal sample program, 12:22152 (J;US)

Slurry Pipelines
Pressure gradient for heterogeneous flow of coal, sand, and iron in pipelines, 12:22784 (R;NL)

Solid Wastes
Testing materials for support-wall construction. Report of Investigations/1986, 12:22165 (R;US)

Solvent Extraction
Pretreatment techniques for coal gasification. Sixth quarterly report, January 1-March 31, 1986, 12:22127 (R;US)
Pretreatment techniques for coal gasification. Eighth quarterly report, July 1-September 30, 1986 (Pretreatment of coal in steam to increase light liquid yields), 12:22128 (R;US)

Staged Combustion
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)

Structural Chemical Analysis
Metal arene complexes in coal structure determination: Quarterly report for the period December 1986-February 1987, 12:22148 (R;US)
Sulfur Content
Coal samples available from the premium coal sample program, 12:22152 (J;US)
Surface Properties
Characterization of coal surfaces: Final report, 12:22146 (R;US)
Swelling
Structural mobility in coal dissolution, 12:22106 (RA;US)
Wettability
Characterization of coal surfaces: Final report, 12:22146 (R;US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS
See also COAL SEAMS
Information Systems
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Maps
Coal data: A reference (Often by state; data for many years in most cases), 12:22083 (R;US)

COAL EXTRACTS
Fractionation
Pretreatment techniques for coal gasification. Sixth quarterly report, January 1-March 31, 1986, 12:22127 (R;US)
Infrared Spectra
Degradation of lignite coal by Polyporus versicolor: Initial characterization of products, 12:22111 (RA;US)
NMR Spectra
Degradation of lignite coal by Polyporus versicolor: Initial characterization of products, 12:22111 (RA;US)
Solubility
Degradation of lignite coal by Polyporus versicolor: Initial characterization of products, 12:22111 (RA;US)
Structural Chemical Analysis
Degradation of lignite coal by Polyporus versicolor: Initial characterization of products, 12:22111 (RA;US)
Yields
Pretreatment techniques for coal gasification. Eighth quarterly report, July 1-September 30, 1986, 12:22128 (R;US)

COAL FINES
Particle Size
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Porosity
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)

COAL GASIFICATION
See also LURGI PROCESS
TEXACO GASIFICATION PROCESS
Catalysts
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
Chemical Reactors
Pretreatment techniques for coal gasification. Fifth quarterly report, October 1-December 31, 1985, 12:22126 (R;US)
Optimization
Techniques for coal gasification: Final report (Conditioning coal in steam), 12:22129 (R;US)
Research Programs
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
Pretreatment techniques for coal gasification. Fifth quarterly report, October 1-December 31, 1985, 12:22126 (R;US)
Pretreatment techniques for coal gasification. Sixth quarterly report, January 1-March 31, 1986 (Steam treatment of coal to increase eight liquid yields), 12:22127 (R;US)
Pretreatment techniques for coal gasification. Eighth quarterly report, July 1-September 30, 1986 (Pretreatment of coal in steam to increase light liquid yields), 12:22128 (R;US)
Waste Water
Characterization of KILnGAS wastewater: Final report, 12:22137 (R;US)
Chemical and bioassay characterizations of sludge and wastewater from fixed bed UNDERC coal gasification: Final report, 12:22154 (R;US)
Yields
Techniques for coal gasification: Final report (Conditioning coal in steam), 12:22129 (R;US)

COAL GASIFICATION PLANTS
Solid Wastes
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)

COAL LIQUIDS
API Gravity
Coal liquefaction co-processing, 12:22114 (RA;US)
Boiling Points
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Carcinogen Screening
Chemical analysis and biological testing of catalytic-catalytic two-stage direct coal liquefaction process materials, 12:22176 (RA;US)
Skin painting studies, 12:23709 (RA;US)
Chemical Composition
Chemical analysis and biological testing of catalytic-catalytic two-stage direct coal liquefaction process materials, 12:22176 (RA;US)
Coal liquefaction co-processing, 12:22114 (RA;US)
Composition of recycle oil from HRI's [Hydrocarbon Research, Inc.] catalytic two-stage liquefaction process, 12:22096 (RA;US)
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Microbial processing of fuels, 12:23613 (RA;US)
Denitrification
Chemistry and morphology of coal liquefaction, 12:22123 (RA;US)
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Density
Coal liquefaction co-processing, 12:22114 (RA;US)
Desulfurization
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
Distillation
Composition of recycle oil from HRI's [Hydrocarbon Research, Inc.] catalytic two-stage liquefaction process, 12:22096 (RA;US)
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
Fractionation
Separation and characterization of hydroxyl aromatics in oils and asphaltenes from nondistillable, pyridine soluble coal-liquids, 12:22145 (RA;US)
Hydrogenation
Catalysts via hydrous metal oxide ion exchangers, 12:22101 (RA;US)
Chemistry and morphology of coal liquefaction, 12:22123 (RA;US)
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Mass Spectra
Separation and characterization of hydroxyl aromatics in oils and asphaltenes from nondistillable, pyridine soluble coal-liquids, 12:22145 (RA;US)
Mutagen Screening
Chemical analysis and biological testing of catalytic-catalytic two-stage direct coal liquefaction process materials, 12:22176 (RA;US)
Toxicity
Skin painting studies, 12:23709 (RA;US)

COAL MINERS
Attitudes
Human resource management skills and coal mine productivity. Final report. Volume 1. Open File report, 12:22173 (R;US)
Productivity
Coal data: A reference (Often by state; data for many years in most cases), 12:22083 (R;US)

COAL MINES
Air Pollution
Deposition of respirable coal dust in an airway. Report of Investigations/1986, 12:22159 (R;US)
Gas Analysis
Gas equilibrium in sealed coal mines. Report of Investigations/1986, 12:22178 (R;US)
Underground Mining
Underground-coal-mine lighting handbook. Part 1. Background. Information Circular/1986, 12:22163 (R;US)
Underground-coal-mine lighting handbook. Part 2. Application. Information Circular/1986, 12:22164 (R;US)

COAL MINING
Longwall Mining
Using barriers to reduce dust exposure of longwall-face workers. Report of Investigations/1986, 12:22160 (R;US)
Productivity
Human resource management skills and coal mine productivity. Final report. Volume 1. Open File report, 12:22173 (R;US)
Human resource management skills and coal-mine productivity. Final report. Volume 2. Open File report, 12:22174 (R;US)
Underground Mining
Testing materials for support-wall construction. Report of Investigations/1986, 12:22165 (R;US)

COAL PREPARATION
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)

COAL PREPARATION PLANTS
Pressure Vessels
Microstructure-mechanical property relationships in modified 3 chrome steels, 12:22902 (BA;US)

COAL RESERVES
Information Systems
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
COAL SEAMS
Methane
Economic evaluation of horizontal borehole drilling for methane drainage from coalbeds. Information Circular/1986, 12:22210 (R;US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Test Facilities
Gas turbine component screening program: Final report, 12:22396 (R;US)

COASTAL REGIONS
Atmospheric Circulation
Modeling the polluted coastal urban environment: Volume 1, The PBL [planetary boundary level] model: Final report, 12:23413 (R;US)
COASTAL WATERS
Water Currents
Biological processes in the water column of the South Atlantic Bight: Zooplankton responses: A progress report, June 1986 to June 1987, 12:23498 (R;US)
COATINGS
Adhesion
Practical measurements of adhesion and strain for improved optical coatings, 12:23214 (R;US)
Microanalysis
Scanning Auger microanalysis (SAM) studies of carbide coatings of titanium, zirconium and hafnium, 12:22923 (R;US)
COBALT
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
Catalytic Effects
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Photoelectron Spectroscopy
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)
Separation Processes
Continuous preconcentration of cobalt and uranium using liquid emulsion membranes, 12:23028 (RA;CS)
Membrane extraction for preconcentration of radionuclides, 12:23026 (RA;CS)
X-Ray Fluorescence Analysis
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)
COBALT 57
Excited States
Determination of spin of deep-lying proton-hole states in the /sup 58/Ni(d,/sup 3/He)/sup 57/Co reaction, 12:23961 (RA;SU;In Russian)
COBALT 60
Adsorption
Sorption of radionuclides on natural materials, 12:22294 (RA;CS)
Biological Radiation Effects
Comparative biological effects of low dose, low dose-rate exposures to fission neutrons from the JANUS reactor or to Co-60 gamma rays, 12:23676 (J;US)
Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
RBE
Micronuclei in bone marrow cells of BALB/c mice irradiated with Cf-252 or Co-60, 12:23678 (J;US)
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)
Testis weight loss following low dose rate (LDR) Cf-252, acute Co-60 or LDR Cs-137 irradiation in BALB/c mice, 12:23679 (J;US)
Therapeutic Uses
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
COBALT ALLOYS
See also HASTELLOY X
INCONEL 617
Crack Propagation
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Fracture Properties
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Hydrogen Embrittlement
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Interstitials
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)
Thermal Diffusion
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)
COBALT OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)
COHERENT ANTI-STOKES RAMAN SPECTROSCOPY
See RAMAN SPECTROSCOPY
COKE
Fluidized-Bed Combustion
Design and economic evaluation of an energy-integrated thermal process for recovery of oil from tar sands, 12:22220 (RA;US)
Moisture
Neutron and gamma-ray transmission technique for the on-line determination of moisture in coal and coke, 12:23056 (RA;AU)
COLD PLASMA
Parametric Instabilities
Ion acceleration during strong electromagnetic radiation interaction with a plasma, 12:24249 (RA;SU;In Russian)
Plasma Waves
Two-dimensional dynamics of the plasma wakefield accelerator, 12:23274 (J;US)
COLD STORAGE
Performance
Measured performance of cool storage in buildings: summary of initial analysis, 12:22730 (RA;US)
COLEOPTERA
Population Dynamics
Coleoptera of the Idaho National Engineering Laboratory: an annotated checklist, 12:23471 (J;US)
Species Diversity
Coleoptera of the Idaho National Engineering Laboratory: an annotated checklist, 12:23471 (J;US)

COLLECTIVE MODEL
Giant angular resonance and structure of the lowest nuclear states, 12:24029 (R;SU;In Russian)
COLLEGES
See EDUCATIONAL FACILITIES
COLLIERIES
See COAL MINES
COLLISIONAL PLASMA
Beta Ratio
Analytical theory of nonlinear drift-tearing mode stability, 12:24268 (J;US)
Drift Instability
Analytical theory of nonlinear drift-tearing mode stability, 12:24268 (J;US)
Magnetic Islands
Analytical theory of nonlinear drift-tearing mode stability, 12:24268 (J;US)
Nonlinear Problems
Analytical theory of nonlinear drift-tearing mode stability, 12:24268 (J;US)
Stability
Analytical theory of nonlinear drift-tearing mode stability, 12:24268 (J;US)
Tearing Instability
Analytical theory of nonlinear drift-tearing mode stability, 12:24268 (J;US)
COLLISIONLESS PLASMA
Electron Beams
Experiments on Langmuir wave collapse, 12:24223 (RA;FR)
High-Frequency Discharges
Experiments on Langmuir wave collapse, 12:24223 (RA;FR)
Potentials
Formation of electrostatic potential in a magnetized plasma, 12:24221 (RA;FR)
COLLOIDS
See also SOLS
Adsorption
Improving the stability of coal slurries: Quarterly progress report for the period December 15, 1986-March 15, 1987 (Adsorption of gum tragacanth on polystyrene latex spheres), 12:22147 (R;US)
COLOGNE SPIRITS
See ETHANOL
COLOMBIA
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
COLORADO
Air Quality
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
Natural Gas Deposits
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
COLORIMETRY
See ABSORPTION SPECTROSCOPY
COLUMBIUM
See NIOBIUM
COMBUSTION
Additives
Evaluation of Glo-Klen additive in desulfurization: Final report, 12:22167 (R;US)
COMBUSTION KINETICS
Measuring Methods
Hybrid closed bomb-strand burner for very high pressure burning rate measurements, 12:23186 (R;US)
COMBUSTION PRODUCTS
Toxicity
Fire and smoke: understanding the hazards. Final report, January 1985-August 1986, 12:23434 (R;US)
COMBUSTION WAVES
Nonlinear Problems
Interaction of pulsating and spinning waves in condensed phase combustion, 12:23188 (J;US)
Pulsations
Interaction of pulsating and spinning waves in condensed phase combustion, 12:23188 (J;US)
COMBUSTORS
See also CYCLONE COMBUSTORS
FLUIDIZED-BED COMBUSTORS
Materials
Gas turbine component screening program: Final report, 12:22396 (R;US)
COMMERCIAL BUILDINGS
Architecture
Improved building energy efficiency through integrated architecture and engineering research and education, 12:22709 (RA;US)
Cold Storage
Measured performance of cool storage in buildings: summary of initial analysis, 12:22730 (RA;US)
Design
Improved building energy efficiency through integrated architecture and engineering research and education, 12:22709 (RA;US)
Energy Audits
Large commercial energy auditing program at Sacramento Municipal Utility District (SMUD), 12:22728 (RA;US)
Energy Conservation
Energy conservation opportunities in commercial buildings - training and services for improved O/M, 12:22716 (RA;US)
Experiences during the first year of operation of three low-energy apartment buildings, a part of the Stockholm project, 12:22713 (RA;US)
Understanding the market for conservation technologies in the commercial sector, 12:22733 (RA;US)
Energy Consumption
Determining electrical demand savings for small commercial buildings with overnight storage of chilled water a simplified procedure for preliminary economic analysis, 12:22712 (RA;US)
Energy Demand
Determining electrical demand savings for small commercial buildings with overnight storage of chilled water a simplified procedure for preliminary economic analysis, 12:22712 (RA;US)
Energy Efficiency
Achieving commercial/industrial energy efficiency in a market environment, 12:22732 (RA;US)
Administration of small energy conservation projects in commercial buildings, 12:22710 (RA;US)
Comparison of measured end-use consumption for 12 energy-efficient, new commercial buildings, 12:22724 (RA;US)
Determining electrical demand savings for small commercial buildings with overnight storage of chilled water a simplified procedure for preliminary economic analysis, 12:22712 (RA;US)
Energy conservation opportunities in commercial buildings - training and services for improved O/M, 12:22716 (RA;US)
Energy edge buildings in Oregon, 12:22723 (RA;US)
Energy savings in retrofitted multi-family buildings: new results from the BECA-B project, 12:22714 (RA;US)
Exhaust air heat recovery, 12:22722 (RA;US)
Experiences during the first year of operation of three low-energy apartment buildings, a part of the Stockholm project, 12:22713 (RA;US)
Future directions of commercial energy research: a utility perspective, 12:22711 (RA;US)
Improved building energy efficiency through integrated architecture and engineering research and education, 12:22709 (RA;US)

Industrial energy retrofits - an underutilized resource, 12:22729 (RA;US)
Large commercial energy auditing program at Sacramento Municipal Utility District (SMUD), 12:22728 (RA;US)
Marketing energy investments to parties of commercial short-term leases: barriers and opportunities, 12:22742 (RA;US)
Measured performance of cool storage in buildings: summary of initial analysis, 12:22730 (RA;US)
Overview of the Energy Edge project design upgrading efficiency in commercial construction practice, 12:22719 (RA;US)
Preparation of the third edition of the National Program Plan for the Thermal Performance of Building Envelope Systems & Materials, 12:22725 (RA;US)
Purchase of Energy Savings Pilot Program's role within BPA's commercial buildings program strategy, 12:22760 (RA;US)
Research plan for commercial sector retrofits, 12:22717 (RA;US)
Understanding the market for conservation technologies in the commercial sector, 12:22733 (RA;US)
Utility incentives program for the retrofit of commercial buildings, 12:22715 (RA;US)

Energy Management
Administration of small energy conservation projects in commercial buildings, 12:22710 (RA;US)

Energy Management Systems
Energy management systems in large commercial buildings - Monitoring and control capabilities, 12:22774 (BA;US)

Fuel Systems
Advanced systems development - interior piping materials/configuration. Topical report, design concepts, March 1985-October 1986, 12:22212 (R;US)

Lighting Systems
Luminaire retrofit performance: Commercial building lighting systems: Final report, 12:22765 (R;US)

Retrofitting
Industrial energy retrofits - an underutilized resource, 12:22729 (RA;US)

Thermal Analysis
Measured performance of cool storage in buildings: summary of initial analysis, 12:22730 (RA;US)

COMMON MARKET

Research Programs
Development of a European market for third party finance, 12:22747 (RA;US)

COMMUNICATIONS

See also TELEPHONES

Electric Filters
Documentation of computer programs for optimization and simulation of multicarrier SAW-based demodulator, 12:23243 (R;NO)

COMMUNITIES

Energy Conservation
City of Heyburn conservation plan, 12:22798 (R;US)

COMPACT IGNITION TOKAMAK

A Tokamak proposed as a next-step after TFTR, i.e., for extensive ignited-core studies.

Neutron Transport
One- and two-dimensional radiation analysis of the Compact Ignition Tokamak, 12:24280 (R;US)

Shielding
One- and two-dimensional radiation analysis of the Compact Ignition Tokamak, 12:24280 (R;US)

COMPACT TORUS

Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.

Magnetic Fields
Rotating magnetic field technique of driving current and its application in the Rotamak, 12:24216 (RA;FR)

Rotation
Rotating magnetic field technique of driving current and its application in the Rotamak, 12:24216 (RA;FR)

COMPOSITE MATERIALS

See also SUPERCONDUCTING COMPOSITES

Wear
Evaluation of wear rates and mechanisms of titanium diboride-graphite composite materials proposed for use as cathodes in Hall-Heroult cells, 12:22956 (R;US)

COMPOUNDS (ORGANIC)

See ORGANIC COMPOUNDS

COMPUTED TOMOGRAPHY

See COMPUTERIZED TOMOGRAPHY

COMPUTER CODES

Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.

See also A CODES
B CODES
C CODES
D CODES
F CODES
M CODES
N CODES
S CODES

Bibliographies
Abstracts of digital computer code packages assembled by the Radiation Shielding Information Center, 12:24344 (R;US)

H Codes
Parametric thermohydraulic calculations for advanced pressurized water reactors with the code HADA-2, 12:22457 (R;DE)

Validation
Residential response to time-of-use rates: Volume 4, Assessing RETOU's out-of-sample performance: Final report (Test of computer codes on utilities not involved in it's development), 12:22439 (R;US)

COMPUTER GRAPHICS
Interactive computer model for calculating V-I curves in ESPS (electrostatic precipitators): Version 1.0 (for microcomputers). Model, 12:23432 (R;US)
SOILINER Version 1 (for microcomputers). Software, 12:23475 (R;US)

A Codes
Experience on several devices for a SAS/GRAPH general application sample library, 12:24332 (R;IT)

B Codes
Experience on several devices for a SAS/GRAPH general application sample library, 12:24332 (R;IT)

Evaluation
Identifying and selecting a computerized image editing/processing system, 12:24353 (R;US)

F Codes
Experience on several devices for a SAS/GRAPH general application sample library, 12:24332 (R;IT)

Programming
Graphic utilities 'GPREP' and 'LIBGR', 12:24338 (R;JP;In Japanese)

COMPUTER NETWORKS
Networking through the new phone system: The future of telecommunications, 12:23821 (R;US)

Computer Architecture
Dynamically partitionable multicomputers with switchable memory, 12:24373 (J;US)

Parallel Processing
Parallel processing of networks. Final technical report, 12:24326 (R;US)

COMPUTER PROGRAMS

See COMPUTER CODES

COMPUTER-AIDED DESIGN

Computer Graphics
An IGES electrical test: CADCAM-035, 12:24350 (R;US)

COMPUTER-AIDED MANUFACTURING

Computer Graphics
An IGES electrical test: CADCAM-035, 12:24350 (R;US)

COMPUTERIZED CONTROL SYSTEMS

Design
Control systems development, research and development: Annual progress report, October 1983 through September 1984, 12:23203 (R;US)

Uses
Control systems development, research and development: Annual progress report, October 1983 through September 1984, 12:23203 (R;US)

COMPUTERIZED SIMULATION
Parallel Processing
Mathematical and numerical models to achieve high speed with special-purpose parallel processors, 12:22611 (J;US)
Performance
Secondary containment building performance in severe accidents, 12:22563 (RA;US)

COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
Image Processing
Digital radiography. I: Basic factor and image processing routines, 12:23588 (R;NO;In Norwegian)

COMPUTERS
See also CRAY COMPUTERS
Security
Computer-Aided-Instruction (user/CSO computer security training), 12:24347 (R;US)
Safeguards and security progress report, January-December 1985, 12:22338 (R;US)
Training
US Department of Energy High School Student Supercomputing Honors Program: A follow-up assessment, 12:24309 (R;US)

CONCENTRATIONS (RADIONUCLIDES)
See RADIOACTIVITY

CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Fresnel Lens
Development of a holographic beamsplitter for use with a conventional Fresnel lens, 12:22371 (R;US)

CONCRETES
Acidification
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Elasticity
Simplified model for concrete at low confining pressures, 12:22583 (RA;US)
Fluid-Structure Interactions
Further development of KAVERN and code development on gas generation from the containment basement during concrete decomposition, 12:22522 (R;DE;In German)
Mathematical Models
Simplified model for concrete at low confining pressures, 12:22583 (RA;US)
Nondestructive Analysis
Utilization of portable neutron interrogation for in-plant inventory verification, 12:22344 (J;US)
Plasticity
Simplified model for concrete at low confining pressures, 12:22583 (RA;US)
Quantitative Chemical Analysis
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Waste Product Utilization
Testing materials for support-wall construction. Report of Investigations/1986, 12:22165 (R;US)

CONDENSATION CHAMBERS
Pressure Suppression
Experimental investigations on load reduction in the pressure suppression system of boiling water reactors, 12:22518 (R;DE;In German)

CONFERENCES
See MEETINGS

CONSERVATION (ENERGY)
See ENERGY CONSERVATION

CONSOLIDATED FUEL REPROCESSING PROGRAM
Robots
Telerobotic technology for nuclear and space applications, 12:23194 (R;US)

CONTACT RADIOTHERAPY
See RADIOTHERAPY

CONTACTS (ELECTRIC)
See ELECTRIC CONTACTS

CONTAINERS
See also CASKS
PRESSURE VESSELS
REACTOR VESSELS
TANKS
Corrosion
Assessment of carbon steel overpacks for radioactive waste disposal, 12:22290 (R;FR)
Corrosion Resistance
Corrosion behaviour of container materials for the disposal of high-level wastes in rock salt formations. Activity report 1983-1984, 12:22288 (R;FR)
Corrosion behaviour of container materials for geological disposal of high-level waste. Annual progress report 1984, 12:22286 (R;FR)
Evaluation
Evaluation and compilation of DOE waste package test data: Biannual report, December 1985-July 1986, 12:22303 (R;US)
Nickel Steels
Development of 1.5Ni-CLC steel for LPG storage tanks, 12:22200 (R;JP)

CONTAINMENT BUILDINGS
Construction
Construction and analysis of a 1/6th-scale concrete containment model, 12:22587 (RA;US)
Failures
Evaluation of structural failure modes for prestressed concrete containments, 12:22588 (RA;US)
Performance
Secondary containment building performance in severe accidents, 12:22563 (RA;US)
Performance Testing
Construction and analysis of a 1/6th-scale concrete containment model, 12:22587 (RA;US)
Scale Models
Construction and analysis of a 1/6th-scale concrete containment model, 12:22587 (RA;US)

CONTAINMENT SYSTEMS
C Codes
Hydrogen burn assessment with the CONTAIN code, 12:22580 (RA;US)
Integrated analysis of core debris interactions and their effects on containment integrity using the CONTAIN computer code, 12:22575 (RA;US)
Concretes
Simplified model for concrete at low confining pressures, 12:22583 (RA;US)
Crack Propagation
Crack propagation in high strain regions of a steel containment, 12:22591 (RA;US)
Dynamic Loads
Small scale model for experimental investigations of the dynamic behavior of spherical steel containments, 12:22595 (RA;US)
Electrical Equipment
Leak behavior through EPAs under severe accident conditions, 12:22597 (RA;US)
Failure Mode Analysis
Analysis of severe accidents and estimates of ultimate loading capacity of the steel containment, 12:22594 (RA;US)
Evaluation of uncertainties in risk emanating from a number of severe accident issues, 12:22567 (RA;US)
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
Failures
Analytical correlation and interpretation of full scale containment specimen tests, 12:22586 (RA;US)

Failure mechanisms of LWR steel containment buildings subject to severe accident loadings, 12:22592 (RA;US)
Failure pressure and failure mode of the latest type of German PWR containments, 12:22593 (RA;US)
Results of large-scale test of discontinuity region in a prestressed concrete containment, 12:22585 (RA;US)
Filters
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
Foundations
Influence of non-linearity and foundation behavior on containment integrity, 12:22589 (RA;US)
Hydrogen
Hydrogen burn assessment with the CONTAIN code, 12:22580 (RA;US)
Hydrogen deflagration tests in hydro-sc facility, 12:22576 (RA;US)
Impact of a hydrogen ignition system on degraded core accident in a Mark III containment, 12:22579 (RA;US)
Scaling and extrapolation of hydrogen distribution experiments, 12:22577 (RA;US)
Two aspects of hydrogen risk, 12:22578 (RA;US)
In-Service Inspection
Preservice and inservice requirements for containment structures - a status report, 12:22570 (RA;US)
Review of containment examination and testing requirements, 12:22571 (RA;US)
Leak Testing
Alternative containment integrity retesting requirements and local leakage calculation methods, 12:22569 (RA;US)
Alternative containment integrity test methods, an overview of possible techniques, 12:22574 (RA;US)
Methods for determining integrated leakage rate test duration - case studies, 12:22573 (RA;US)
New Belgian position on containment leakage testing, 12:22568 (RA;US)
Pending revisions to ANS 56.8-81 containment systems leakage testing requirements, 12:22572 (RA;US)
Review of containment examination and testing requirements, 12:22571 (RA;US)
Mathematical Models
Structural analysis of a Japanese BWR MARK-I containment under internal pressure loading, 12:22590 (RA;US)
Performance
Containment integrity is a major part of KKL-safety systems PRA, 12:22565 (RA;US)
Effect of high temperature on integrity of concrete containment structures, 12:22584 (RA;US)
Leakage potential through mechanical penetrations in a severe accident environment, 12:22596 (RA;US)
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
Plasticity
Plastic analysis of concrete containment structure, 12:22582 (RA;US)
Prestressed Concrete
Results of large-scale test of discontinuity region in a prestressed concrete containment, 12:22585 (RA;US)
Reactor Safety
Plastic analysis of concrete containment structure, 12:22582 (RA;US)
Reinforced Concrete
Analytical correlation and interpretation of full scale containment specimen tests, 12:22586 (RA;US)
Plastic analysis of concrete containment structure, 12:22582 (RA;US)
Reliability
Integrated analysis of core debris interactions and their effects on containment integrity using the CONTAIN computer code, 12:22575 (RA;US)
Structural reliability of containment structures - CANDU nuclear power plants, 12:22561 (RA;US)
Scale Models
Small scale model for experimental investigations of the dynamic behavior of spherical steel containments, 12:22595 (RA;US)
Seals
Leakage potential through mechanical penetrations in a severe accident environment, 12:22596 (RA;US)
Steels
Crack propagation in high strain regions of a steel containment, 12:22591 (RA;US)
Failure mechanisms of LWR steel containment buildings subject to severe accident loadings, 12:22592 (RA;US)
Temperature Effects
Effect of high temperature on integrity of concrete containment structures, 12:22584 (RA;US)
Ventilation Systems
Analysis of strategies for containment venting in case of severe accidents, 12:22566 (RA;US)

CONTAMINATION
Contamination with radioactive materials and decontamination, 12:22295 (R;CS;In Czech)
Regional Analysis
Experimental studies in the radioecology of tritium in Marburg and its surroundings in 1981/1982: Tritium activity in surface, source, rain and drinking water as well as in air humidity, 12:23529 (R;DE;In German)

CONTROL EQUIPMENT
Research Programs
Instrumentation and Controls Division progress report for the period July 1, 1984 to July 1, 1986, 12:23285 (R;US)

CONTROL (RADIOACTIVITY)

COPPER
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Determination of concentration of some plant elements in reactions with charged particles, 12:23069 (RA;SU;In Russian)
Chemical Reaction Kinetics
In-situ observation of copper oxidation in a hot-stage environmental SEM, 12:22907 (BA;US)
Corrosion
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Emission Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission II, 12:24129 (J;NL)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Membrane Transport
Physiological genetics of denitrification: A route to conserving fixed nitrogen: Progress [report], January 1986-January 1987, 12:22366 (R;US)
Oxidation
In-situ observation of copper oxidation in a hot-stage environmental SEM, 12:22907 (BA;US)

Physical Radiation Effects
Effects of 500 keV electron irradiation and subsequent annealing on 1/f noise in copper films, 12:22893 (BA;NL)
Neutron damage microstructures of high-conductivity copper alloys, 12:22881 (J;NL)
Resolvability of defect ensembles with positron annihilation studies, 12:22915 (J;US)
Radiation Effects
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Shock Waves
Shock-impedance-match experiments at pressures to 2.5 TPa (25 Mbar), 12:22871 (R;US)
Structural Chemical Analysis
In-situ observation of copper oxidation in a hot-stage environmental SEM, 12:22907 (BA;US)

COPPER 63 TARGET
Alpha Reactions
Spectra of charged particles produced in the 24.6 MeV α-particle interactions with /sup 61/Ni and /sup 63/Cu nuclei, 12:23965 (RA;SU;In Russian)

COPPER ALLOYS
See also COPPER BASE ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Electronic Specific Heat
Pressure dependence of the specific heat of heavy-fermion compounds ($CeAl_3$; $CeCu_6$; UBe_{13}; UPt_3), 12:22855 (R;US)
Electronic Structure
[Surface studies at the NSLS]: Technical progress report (Valence band structure of Cu-Au surface alloy), 12:22828 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Magnetic Susceptibility
Transition from Kondo-lattice to intermediate valence state in Ce(Cusub(1-x)Nisub(x))sub(5) compounds, 12:22844 (R;SU)
Specific Heat
Transition from Kondo-lattice to intermediate valence state in Ce(Cusub(1-x)Nisub(x))sub(5) compounds, 12:22844 (R;SU)

COPPER BASE ALLOYS
Corrosion
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Physical Radiation Effects
Neutron damage microstructures of high-conductivity copper alloys, 12:22881 (J;NL)
Radiation Effects
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)

COPPER COMPLEXES
Molecular Structure
Structural study of the Cu sites in metallothionein from neurospora crassa, 12:23118 (J;US)
Radiolysis
Kinetics of formation and decomposition of the methyl-copper(II) complex in aqueous solutions. A pulse radiolysis study, 12:23149 (RA;IL)
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

COPPER OXIDES
Chemical Preparation
Sulfur dioxide removal from flue gases by supported copper and iron absorbents: Technical report No. 2, 11/16/86-2/15/87, 12:22157 (R;US)
Sorptive Properties
Sulfur dioxide removal from flue gases by supported copper and iron absorbents: Technical report No. 2, 11/16/86-2/15/87, 12:22157 (R;US)

CORES (REACTOR)
See REACTOR CORES

CORIUM
Fluid-Structure Interactions
Further development of KAVERN and code development on gas generation from the containment basement during concrete decomposition, 12:22522 (R;DE;In German)

CORNELL ELECTRON-POSITRON STORAGE RING
See CESR STORAGE RING

CORONA (SOLAR)
See SOLAR CORONA

CORTEX (CEREBRAL)
See CEREBRAL CORTEX

CORTICOIDS
See CORTICOSTEROIDS

CORTICOSTEROIDS
Labelling
Tritium synthesis of an adrenal cortex derivative. 21-Deoxycortisol-l,2-/sup 3/H, 12:23164 (RA;IL)

COSMIC MUONS
Prior to July, 1975 information was indexed to MUONS.
Spatial Distribution
On nature of high energy muon narrow groups, 12:23761 (RA;SU;In Russian)

COSMIC PARTICLES
See COSMIC RADIATION

COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
See also COSMIC MUONS
SECONDARY COSMIC RADIATION
Acceleration
Cosmic ray acceleration by collisionless shocks, 12:23749 (RA;FR)
Neutron Monitors
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
Shock Waves
Cosmic ray acceleration by collisionless shocks, 12:23749 (RA;FR)

COSMIC RAY FLUX
Isotope Dating
Cosmogenic radiocarbon and short-term variations of galactic cosmic rays, 12:23759 (RA;CS;In Slovak)

COSMIC X-RAY SOURCES
Detection
History of x-ray transients as seen by Vela, 1969-1979, 12:23774 (J;US)

COSMOGONY
See COSMOLOGY

COSMOLOGICAL CONSTANT
Time Dependence
Possible inflationary solution to the short distance gravity model, 12:23757 (R;XA)

COSMOLOGICAL MODELS
Eternally existing self-reproducing inflationary universe, 12:23754 (R;XA)
Compactification
Eternal chaotic inflation, 12:23753 (R;XA)
Stochastic Processes
On the stochastic approach to inflation and the initial conditions in the universe, 12:23752 (R;XA)

COSMOLOGY
Cosmology, inflation, and supersymmetry, 12:23773 (BA;NL)
Little night-physics, 12:23767 (R;AT)
CP Invariance
Cosmological baryon production in spontaneous-CP-violating models without strong CP problem, 12:23769 (J;US)
Standard Model
Probing the structure of the universe from quarks to cosmology, 12:23770 (J;US)
String Models
Attractor in a superstring model. The Einstein theory, the Friedmann universe and inflation, 12:24148 (R;XA)

COSMOS
See UNIVERSE

COUNTERS (RADIATION)
See RADIATION DETECTORS

COUNTY BUILDINGS
See PUBLIC BUILDINGS
COURT BUILDINGS
See PUBLIC BUILDINGS
COW-MILKERS
See RADIOISOTOPE GENERATORS
COYOTES
Predator-Prey Interactions
Energy and protein content of coyote prey in southeastern Idaho, 12:23470 (J;US)
CRABS
DNA Sequencing
Structure and organization of the eukaryotic genome with special emphasis on satellite DNAs and the phenomenology of the crustacean molt cycle, 12:23547 (RA;US)
Genome Mutations
Structure and organization of the eukaryotic genome with special emphasis on satellite DNAs and the phenomenology of the crustacean molt cycle, 12:23547 (RA;US)
Molting
Structure and organization of the eukaryotic genome with special emphasis on satellite DNAs and the phenomenology of the crustacean molt cycle, 12:23547 (RA;US)
CRANKING MODEL
Projection Operators
Effects of the angular-momentum projection on cranking wave functions, 12:23997 (R;DE;In German)
CRAY COMPUTERS
Computer Graphics
Parallel graph reduction on a supercomputer: A status report, 12:24342 (R;US)
Performance
Squeezing the most out of an algorithm in CRAY FORTRAN, 12:24369 (J;US)
CREEKS
See STREAMS
CRESOLS
Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)
CRESYLIC ACID
See CRESOLS
CRETACEOUS PERIOD
Geologic Strata
Spheroids at the Cretaceous-Tertiary boundary are altered impact droplets of basaltic composition, 12:23728 (J;US)
CRICETULUS
See HAMSTERS
CRITICALITY ACCIDENTS
See RADIATION ACCIDENTS
CROPS
Productivity
A review of national and international activities on modeling the effects of increased CO_2 concentrations on the simulation of regional crop production: (A report on linkage between climate and crop models): Progress report, 12:23428 (R;US)
CROWN ETHERS
See POLYETHYLENE GLYCOLS
CRUDE OIL
See PETROLEUM
CRYOBIOLOGY
Research Programs
Theoretical and applied cryobiology, 12:23687 (RA;US)
CRYOPUMPS
Performance
Evaluation of charcoal sorbents for helium cryopumping in fusion reactors, 12:24304 (J;US)
CRYPT CELLS
Biological Radiation Effects
The response of mouse jejunal crypt cells to Cs-137 gamma rays and Cf-252 neutron irradiation, 12:23677 (J;US)
CRYPTOGRAPHY
Random functions and their small cycles, 12:24349 (R;US)
CRYSTALLINE ROCKS
See METAMORPHIC ROCKS
CRYSTALS
Band Theory
On the interpolation of eigenvalues and a resultant integration scheme, 12:24123 (J;US)
Coherent Scattering
Stochastic theory of scattering from idealized spinodal structures, 12:24126 (J;NL)
CUBA
Nuclear Power Plants
Basic approach to radiation safety in Cuba, 12:22541 (RA;XM;In Russian)
CUBIC LATTICES
Diffusion
Diffusion correlation and isotope effects in high-defect-content solids, 12:24136 (J;GB)
Vacancies
Diffusion correlation and isotope effects in high-defect-content solids, 12:24136 (J;GB)
CULTURAL RESOURCES
Decomposition
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
Weathering
Application of a theory for economic assessment of corrosion damage, 12:23482 (BA;US)
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
CULTURE MEDIA
Optimization
Defined media for plant tissue culture: Final report, 12:22365 (R;US)
CUMULATIVE EFFECT
See PARTICLE PRODUCTION
CURRENT-DRIVE HEATING
Antennas
Modular multijunction grill for current drive studies at 3.7 GHz for Petula-B and TORE SUPRA, 12:24286 (RA;FR)
Frequency Dependence
Consistent and non-consistent quasilinear models of lower-hybrid current drive, 12:24206 (RA;FR)
Lower Hybrid Heating
Consistent and non-consistent quasilinear models of lower-hybrid current drive, 12:24206 (RA;FR)
Stability
Consistent and non-consistent quasilinear models of lower-hybrid current drive, 12:24206 (RA;FR)
Suppression of sawtooth oscillations by Lower Hybrid Current Drive in the Petula-B tokamak, 12:24237 (RA;FR)
CUTTING TOOLS
Hard Facing
Scanning Auger microanalysis (SAM) studies of carbide coatings of titanium, zirconium and hafnium, 12:22923 (R;US)
CYANIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Dissociation
Faraday discussion No. 82: Dynamics of molecular photofragmentation: Comment on papers No. 4 and No. 10, 12:23794 (R;US)
Infrared Spectra
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Magnetic Susceptibility
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Moessbauer Effect
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)

CYCLOALKANES
See also CYCLOHEXANE
Emission Spectra
Conformational equilibria in trans-1,2-diarylethylenes manifested in their emission in solution. Part VI. Heterocyclic analogues, their triplets and exciplexes, 12:23161 (J;CH)
CYCLOHEXANE
Chemical Preparation
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)
CYCLONE COMBUSTORS
Melting
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Staged Combustion
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
CYCLONE SEPARATORS
Design
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 6, December 1, 1986-February 28, 1987, 12:22086 (R;US)
Fabrication
Three-dimensional structure of flow in coal-cleaning cyclones: Technical progress report No. 6, December 1, 1986-February 28, 1987, 12:22086 (R;US)
Performance
User's guide for PARTIC II (Version II): A computer code for analyzing the performance of particulate-control devices, 12:22153 (R;US)
CYCLOPHOSPHAMIDE
See ENDOXAN
CYCLOTRON RADIATION
Damping
Kinetic full wave theory of strong spatial damping of electron cyclotron waves in nearly parallel stratified plasmas, 12:24273 (J;US)
CYCLOTRONS
See also ISOCHRONOUS CYCLOTRONS
Design
Superconducting cyclotron for neutron radiotherapy, 12:23260 (RA;FR)
Isotope Production
National medical cyclotron facility: report to the Minister of Health by the Medical Cyclotron Committee, 12:23586 (R;AU)
Operation
88-Inch Cyclotron newsletter, 12:23264 (R;US)
CYTOCHROMES
Redox Potential
Potentiometric study of cytochrome c1aa$_3$ from Thermus thermophilus, 12:23127 (J;US)
CZECHOSLOVAKIA
Synchrotron Radiation Sources
Shall we build a synchrotron radiation source in Czechoslovakia?, 12:23263 (RA;CS;In Czech)

D

D CODES
Validation
Validation of elastic-plastic computer analyses for use in nuclear waste shipping cask design, 12:23196 (R;US)
D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
CP Invariance
Searching for possible large CP-violation effects in neutral-charm-meson decays, 12:23905 (J;US)
Decay
Searching for possible large CP-violation effects in neutral-charm-meson decays, 12:23905 (J;US)
D PLUS RESONANCES
See D MESONS
D ZERO RESONANCES
See D MESONS
D-1285 RESONANCES
Particle Decay
Study of D(1285) -> K/sup +/K/sup -/π/sup 0/ decay and D(1285)- and E(1420)-mesons production in exclusive reactions, induced by π/sup -/- and K/sup -/-mesons at 32.5 GeV/c, 12:23828 (R;SU)
Particle Production
Study of D(1285) -> K/sup +/K/sup -/π/sup 0/ decay and D(1285)- and E(1420)-mesons production in exclusive reactions, induced by π/sup -/- and K/sup -/-mesons at 32.5 GeV/c, 12:23828 (R;SU)
D-1865 RESONANCES
See D MESONS
DARLINGTON-1 REACTOR
Darlington, Ontario, Canada
Containment Systems
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
Risk Assessment
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
DARLINGTON-2 REACTOR
Darlington, Ontario, Canada
Containment Systems
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
Risk Assessment
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
DARLINGTON-3 REACTOR
Darlington, Ontario, Canada
Containment Systems
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
Risk Assessment
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
DARLINGTON-4 REACTOR
Darlington, Ontario, Canada
Containment Systems
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
Risk Assessment
Modelling of a negative-pressure, filtered-vented containment system as part of a probabilistic safety evaluation, 12:22562 (RA;US)
DATA ACQUISITION SYSTEMS
Computer Architecture
The data acquisition system for SLD, 12:23373 (J;US)
Design
A remotely-operated low background germanium multi-detector spectrometer system logistical aspects of the design, 12:23375 (J;US)
High Speed Video Data Acquisition System (VDAS) for H.E.P., including Reference Frame Subtractor, Data Compactor and 16 megabyte FIFO, 12:23376 (J;US)
DATA BASE MANAGEMENT
Batched interpolation searching on databases, 12:24381 (R;US)
Physical design of temporal databases, 12:24380 (R;US)
DATA DISPLAY DEVICES
See DISPLAY DEVICES

DATA DISPLAY SYSTEMS
See DISPLAY DEVICES
DATA TRANSMISSION SYSTEMS
Fiber Optics
Analog data transmission via fiber optics, 12:23374 (J;US)
DATING
See AGE ESTIMATION
DEBRIS (NUCLEAR)
See FISSION PRODUCTS
DECANE
Phase Studies
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)
DECANOIC ACID
Diffusion
Effects of molecular organization on photophysical behavior. Excimer kinetics and diffusion of 1-pyrenedecanoic acid in lipid monolayers at the nitrogen-water interface, 12:23146 (J;US)
Photochemistry
Effects of molecular organization on photophysical behavior. Excimer kinetics and diffusion of 1-pyrenedecanoic acid in lipid monolayers at the nitrogen-water interface, 12:23146 (J;US)
Reaction Kinetics
Effects of molecular organization on photophysical behavior. Excimer kinetics and diffusion of 1-pyrenedecanoic acid in lipid monolayers at the nitrogen-water interface, 12:23146 (J;US)
DECONTAMINATION
Contamination with radioactive materials and decontamination, 12:22295 (R;CS;In Czech)
Adsorbents
Possible uses of inorganic adsorbents in nuclear power engineering, 12:23102 (RA;CS;In Czech)
Economics
A preliminary evaluation of the economic risk for cleanup of nuclear material licensee contamination incidents, 12:22304 (R;US)
Inorganic Ion Exchangers
Possible uses of inorganic adsorbents in nuclear power engineering, 12:23102 (RA;CS;In Czech)
DECONTAMINATION FACTOR
See DECONTAMINATION
DEEP INELASTIC HEAVY ION REACTIONS
Bremsstrahlung
Pion and photon bremsstrahlung in a heavy ion reaction model with friction, 12:23989 (R;DE)
Transport Theory
Quantal foundation of the nucleon exchange transport theory, 12:24040 (R;DK)
DE-EXCITATION
Multi-Photon Processes
Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si, 12:23947 (R;DE)
DEFECTS
Not for CRYSTAL DEFECTS.
Metallography
Welding metallurgy of aluminium for radiation tube of reactor, 12:22862 (R;MY;In Malay)
X-Ray Radiography
Welding metallurgy of aluminium for radiation tube of reactor, 12:22862 (R;MY;In Malay)
DEFORMED NUCLEI
BCS Theory
Alpha-like four nucleon correlations in the superfluid phase of atomic nuclei, 12:24026 (R;SU)
Collective Model
Introduction of generator coordinates by the local-scale transformation method, 12:24030 (R;SU;In Russian)
Decay
Decay from the two-quasiparticle regime in even-even deformed rare earth nuclei, 12:23979 (R;NO)
Even-Even Nuclei
Giant angular resonance and structure of the lowest nuclear states, 12:24029 (R;SU;In Russian)
Excited States
Alpha-like four nucleon correlations in the superfluid phase of atomic nuclei, 12:24026 (R;SU)
On nonaxial nuclear model with central symmetry and excited states of deformed nuclei (2), 12:24036 (R;KP;In Korean)
Generator-Coordinate Method
Introduction of generator coordinates by the local-scale transformation method, 12:24030 (R;SU;In Russian)
Nuclear Models
On nonaxial nuclear model with central symmetry and excited states of deformed nuclei (2), 12:24036 (R;KP;In Korean)
DEGRADATION (RADIOINDUCED)
See RADIOLYSIS
DEHUMIDIFIERS
Desiccants
Composite desiccant structure, 12:23114 (P;US)
DEHYDROGENASES
See OXIDOREDUCTASES
DELAYED NEUTRON PRECURSORS
Nuclear Data Collections
Few-group analysis of current delayed-neutron data, 12:22487 (J;US)
DELAYED RADIATION INJURIES
See RADIATION INJURIES
DELETIONS (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS
DELTA RAYS
Angular Distribution
Calculated approach to the ionization of low-Z molecules by heavy charged particles, 12:24054 (RA;FR)
Energy Spectra
Calculated approach to the ionization of low-Z molecules by heavy charged particles, 12:24054 (RA;FR)
DELTA RESONANCES (MESON)
See MESON RESONANCES
DELTA-1236 RESONANCES
Electroproduction
Electrodisintegration of the polarized deuteron with the Δ isobar excitation, 12:24013 (RA;SU;In Russian)
Electroexcitation of Δ (1230) isobar in the constituent quark model, 12:23884 (R;SU;In Russian)
Particle Production
Inclusive Δ/sup ++/ production in π/sup -/p interactions at 5 GeV/c, 12:23833 (RA;CS;In Slovak)
DEMOCRITUS REACTOR
Greek Atomic Energy Commission, Demokritos, Greece
ECCS
Emergency core cooling system for the Greek Research Reactor Democritus, 12:22513 (R;GR;In Greek)
Loss of Coolant
Estimation of the consequences of the research reactor's hypothetical loss of coolant accident on the personnel of the Greek AEC, 12:22516 (R;GR;In Greek)
Occupational Safety
Estimation of the consequences of the research reactor's hypothetical loss of coolant accident on the personnel of the Greek AEC, 12:22516 (R;GR;In Greek)
DENITRIFICATION
Biological Pathways
Physiological genetics of denitrification: A route to conserving fixed nitrogen: Progress [report], January 1986-January 1987, 12:22366 (R;US)
Catalysts
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Demonstration Plants
Start-up and operation of the biodenitrification demonstration facility at the FMPC [Feed Materials Production Center], 12:22291 (R;US)
DENMARK
Transfrontier Contamination
Reactor accident at Chernobyl, U.S.S.R. Radiation measurements in Denmark, 12:23458 (R;DK)

Reactor accident at Chernobyl, U.S.S.R. Radiation measurements in Denmark. 2. report, 12:23459 (R;DK)
Reactor accident at Chernobyl, U.S.S.R. Radiation measurements in Denmark. 3. report, 12:23460 (R;DK)

DESULFURIZATION
Catalysts
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Computerized Simulation
Lime-spray-dryer flue-gas desulfurization computer model user's manual. Final report, January 1982-April 1986, 12:22436 (R;US)

DETECTION (NUCLEAR EXPLOSIONS)
See NUCLEAR EXPLOSION DETECTION

DETECTORS (RADIATION)
See RADIATION DETECTORS

DEUTERATION
Isotopic Exchange
Studies on deuteration of fused silica. Final report, 15 October 1983-14 October 1986, 12:23091 (R;US)

DEUTERIDES
See also HYDROGEN DEUTERIDE
Molecular Structure
High Si-H local mode overtones in $SiHD_3$, 12:23134 (J;US)
Photoacoustic Spectroscopy
High Si-H local mode overtones in $SiHD_3$, 12:23134 (J;US)

DEUTERIUM
Bound State
Trinucleon bound states, 12:24046 (BA;US)
Ionization
Two-color, Doppler-free ionization of molecular hydrogen for isotopic analysis, 12:23093 (R;US)
Isotope Effects
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)
Self-diffusion in compressed supercritical toluene-d_8, 12:23123 (J;US)
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)
Isotopic Exchange
Modeling of temporal behavior of isotopic exchange between gaseous hydrogen and palladium hydride power, 12:23111 (R;US)
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds (At 200 to 300°C with dissolved chromium), 12:23094 (R;US)
Membrane Transport
Determination of the entrance rate and release rate constants and of the diffusion rate constants of hydrogen and deuterium for Inconel 600, by means of permeation measurements and the observation of recycling in the tokamak TEXTOR, 12:24293 (R;DE;In German)
Three-Body Problem
Trinucleon bound states, 12:24046 (BA;US)

DEUTERIUM COMPOUNDS
See also DEUTERIDES
Synthesis
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds (At 200 to 300°C with dissolved chromium), 12:23094 (R;US)

DEUTERIUM HYDRIDE
See HYDROGEN DEUTERIDE

DEUTERIUM TARGET
Deuteron Reactions
Charge asymmetry in d+d reactions, 12:23943 (RA;CS;In Czech)
Proton polarization in /sup 2/H(d,p-vector)/sup 3/H and /sup 12/C(d,p-vector/sub 0/)/sup 13/C reactions at low energies, 12:23944 (RA;CS;In Czech)
Selected results from light ion experiments at the CERN ISR, 12:23839 (R;SE)
Some characteristics of d-bard and n-barn interactions at 12.2 GeV/c, 12:23832 (RA;CS;In Slovak)
Electron Reactions
Electrodisintegration of the polarized deuteron with the Δ isobar excitation, 12:24013 (RA;SU;In Russian)
Electron scattering from nuclei at several GeV, 12:24047 (BA;US)
Probability of the D-state in deuteron on the base of electrodisintegration data, 12:24017 (RA;SU;In Russian)
Relativistic invariant analysis of polarization phenomena in deuteron electrodisintegration near threshold, 12:24018 (RA;SU;In Russian)
Relativistic effects in deuteron electrodisintegration process, 12:24025 (R;SU;In Russian)
Muon Reactions
Study of nuclear effects using structure functions of heavy nuclei nucleons, 12:23830 (RA;CS;In Czech)
Muon-Catalyzed Fusion
Cross sections for scattering of deuterium misic atoms on deuterium nuclei, 12:24292 (R;SU)
Photonuclear Reactions
Inelastic scattering of photons on deuterons and neutron polarizability, 12:24003 (RA;SU;In Russian)
Time of flight system for polarization measurement of photoneutrons from the /sup 2/H(γ,n) reaction, 12:23940 (RA;IL)

DEUTERIUM TRITIDE
Ionization
Two-color, Doppler-free ionization of molecular hydrogen for isotopic analysis, 12:23093 (R;US)
Oriented Nuclei
Polarization of solid deuterium-tritium fuel for nuclear fusion, 12:24296 (R;DE)
Polarization
Polarization of solid deuterium-tritium fuel for nuclear fusion, 12:24296 (R;DE)

DEUTERIUM TRITIDES
See DEUTERIUM TRITIDE

DEUTERON REACTIONS
Inelastic Scattering
Systematic study of the deuteron scattering on even-even sd-shell nuclei by means of the particle-gamma angular correlation at E/sub d/=10 MeV, 12:23954 (R;DE;In German)

DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERON REACTIONS

DEUTERONS
Nuclear Reaction Yield
Emission of fast deuterons at the proton interactions with emulsion heavy nuclei, 12:23962 (R;SU;In Russian)
Particle Production
Peculiarities of deuteron production in /sup 4/He-proton interactions, 12:23945 (R;SU)
Polarization
Production of spin polarized fusion fuels, 12:24303 (P;US)
Spin
Production of spin polarized fusion fuels, 12:24303 (P;US)

DIBARYON RESONANCES
Particle Production
Multinucleon captures of slow antiprotons in complex nuclei and a search for the H dibaryon, 12:23846 (J;NL)
DIELECTRIC MATERIALS
Phase Transformations
Effect of interplane coupling in quasi-two-dimensional systems, 12:24137 (J;US)
DIELECTRIC TRACK DETECTORS
Low level detection and visualisation of fissile and alpha emitting nuclides by solid state nuclear track detectors, 12:23066 (RA;AU)
Design
Energy angle dependence of response of the NRPB CR-39 fast neutron dosemeter, 12:23309 (RA;FR)
Neutron dosimetry system based on the chemical etch of CR-39, 12:23310 (RA;FR)
Etching
Electrochemical etching and angular dependence of CR-39 neutron detectors, 12:23308 (RA;FR)
Protons and neutrons registration by chemically and electrochemically etched CR-39 detectors, 12:23305 (RA;FR)
Response Functions
Energy angle dependence of response of the NRPB CR-39 fast neutron dosemeter, 12:23309 (RA;FR)
DIELECTRICS
See DIELECTRIC MATERIALS
DIESEL ENGINES
Exhaust Gases
Diesel emission survey at Dover AFB, Delaware. Final report, 7-10 January 1986, 12:22808 (R;US)
Fuel Economy
New combustion system of the IDI (indirect injection) diesel engine, 12:22803 (R;US)
Fuel Injection Systems
New combustion system of the IDI (indirect injection) diesel engine, 12:22803 (R;US)
Fuel Substitution
Economic assessment of coal burning diesel locomotives: Topical report, 12:22171 (R;US)
Fuels
Economic assessment of coal burning diesel locomotives: Topical report, 12:22171 (R;US)
Performance
Diesel market penetration study, 12:22800 (R;US)
Power Generation
Compact-treatment package for acoustic suppression of the standard US DOD 30-kW diesel engine-driven generator set. Final report, November 1983-May 1986, 12:23253 (R;US)
DIESEL FUELS
Antiknock Ratings
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
API Gravity
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Chemical Composition
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Comparative Evaluations
Economic assessment of coal burning diesel locomotives: Topical report, 12:22171 (R;US)
Pour Point
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Prices
Economic assessment of coal burning diesel locomotives: Topical report, 12:22171 (R;US)

Chemical Composition
Composition of recycle oil from HRI's [Hydrocarbon Research, Inc.] catalytic two-stage liquefaction process, 12:22096 (RA;US)
Effects of feed boiling range on hydrotreating of Wyodak and Illinois ITSL [Integrated Two-Stage Liquefaction] oils, 12:22095 (RA;US)
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
Hydrogenation
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
DISTRICT COOLING
Feasibility Studies
An assessment of district heating and cooling alternatives with waste-to-energy co-generation potential on the east side of the City of Milwaukee, 12:22795 (R;US)
Assessment of district heating/cooling potential in Marquette, Michigan: Final report, 12:22794 (R;US)
DISTRICT HEATING
Novel nuclear space heating system, 12:22514 (R;CH;In German)
Feasibility Studies
An assessment of district heating and cooling alternatives with waste-to-energy co-generation potential on the east side of the City of Milwaukee, 12:22795 (R;US)
Assessment of district heating/cooling potential in Marquette, Michigan: Final report, 12:22794 (R;US)
DNA
Chemical Radiation Effects
Sixth Czechoslovak biophysical congress with international participation. Abstracts of papers, 12:23640 (R;CS)
Genetic Radiation Effects
Molecular mechanisms of mutagenesis and DNA repair, 12:23692 (RA;US)
Molecular Structure
Structure and organization of the eukaryotic genome with special emphasis on satellite DNAs and the phenomenology of the crustacean molt cycle, 12:23547 (RA;US)
Photochemistry
Reaction of the psoralens with deoxyribonucleic acid, 12:23147 (J;GB)
Receptors
Reaction mechanisms of trans-1,2-dihydroxy-anti-3,4-epoxy-1,2,3,4-tetrahydo-5-methylchrysene with DNA in aqueous solutions, 12:23712 (J;GB)
Strand Breaks
Alkaline-elution measurement of DNA breakage and repair in isolated pachytene spermatocytes and spermatids after exposure to X rays, 12:23657 (RA;US)
Dose-rate effect of ethylene oxide inhalation exposures on DNA breakage in mouse spermatids, 12:23695 (RA;US)
Genetic control of mutagenesis and DNA repair, 12:23560 (RA;US)
Transcription
Chromosome chemistry, 12:23548 (RA;US)
Molecular studies of transcription by eukaryotic RNA polymerase II, 12:23546 (RA;US)
Nucleosome and chromatin biophysics, 12:23549 (RA;US)
DNA ADDUCTS
Biosynthesis
Structural effects in reactivity and adduct formation of polycyclic aromatic epoxide and diol epoxide derivatives with DNA: comparison between 1-oxiranylpyrene and benzo[a]pyrenediol expoxide, 12:23713 (J;US)
DNA REPAIR
Molecular Biology
Repair of human DNA, 12:23653 (RA;US)
DNA REPLICATION
Inhibition
Cell cycle variation in x-ray survival for cells from spheroids measured by volume cell sorting, 12:23683 (BA;US)
Molecular Biology
Chromosomal replicons of higher plants, 12:23535 (R;US)
DNA SEQUENCING
Biological Localization
Exploration of methods to localize DNA sequences missing from c-locus deletions, 12:23659 (RA;US)
DODECANE
Phase Studies
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
DOEL-3 REACTOR
Doel Beveren, Flandre, Belgium
Containment Systems
New Belgian position on containment leakage testing, 12:22568 (RA;US)
Reactor Safety
New Belgian position on containment leakage testing, 12:22568 (RA;US)
DOLOMITE
Thermal Conductivity
Thermal properties of Permian Basin evaporites to 493 K temperature and 30 MPa confining pressure, 12:22937 (R;US)
Thermal Diffusivity
Thermal properties of Permian Basin evaporites to 493 K temperature and 30 MPa confining pressure, 12:22937 (R;US)

ELECTRON DIFFRACTION
Li-Drifted Si Detectors
A comparison of XEDS and EELS with the use of conventional beryllium window and windowless Si(Li) detectors, 12:23090 (BA;US)

ELECTRON DONOR
See ELECTRONS

ELECTRON GUNS
Photocathodes
Simple laser-driven, metal photocathodes as cold, high-current electron sources. Master's thesis, 12:23212 (R;US)
Photoelectric Emission
Simple laser-driven, metal photocathodes as cold, high-current electron sources. Master's thesis, 12:23212 (R;US)

ELECTRON PROBES
Design
Simple system for mapping magnetic field errors in tori, 12:24266 (J;US)
Performance Testing
Simple system for mapping magnetic field errors in tori, 12:24266 (J;US)

ELECTRON REACTIONS
Breakup Reactions
Probability of the D-state in deuteron on the base of electrodisintegration data, 12:24017 (RA;SU;In Russian)
Relativistic invariant analysis of polarization phenomena in deuteron electrodisintegration near threshold, 12:24018 (RA;SU;In Russian)
Relativistic effects in deuteron electrodisintegration process, 12:24025 (R;SU;In Russian)
Inelastic Scattering
Electron scattering from nuclei at several GeV, 12:24047 (BA;US)
Reaction ^{6}Li(e,e/sup '/d) ^{4}He and the α-d momentum distribution in the ground state of ^{6}Li, 12:23953 (J;US)
Knock-Out Reactions
Reaction ^{6}Li(e,e/sup '/d) ^{4}He and the α-d momentum distribution in the ground state of ^{6}Li, 12:23953 (J;US)

ELECTRON-ATOM COLLISIONS
Elastic Scattering
Elastic scattering of electrons from inert gases: 5. Argon and krypton in the vicinity of Ramsauer-Townsend minima and on the choice of pseudo-states, 12:23804 (R;XA)

ELECTRONIC CIRCUITS
See also PRINTED CIRCUITS
TIMING CIRCUITS
Design and construction of electronic components for a "Novillo" Tokamak, 12:24288 (R;MX;In Spanish)
Soldered Joints
Fatigue and thermal fatigue testing of Pb-Sn solder joints, 12:23242 (R;US)

ELECTRONIC STRUCTURE
For electron configuration in atoms and molecules, and electron band structure in solids.
Density Matrix
Relativistic atomic structure studies via density functional theory, 12:24162 (R;XA)

ELECTRON-ION COLLISIONS
C Codes
Electron-impact ionization data for the Fe isonuclear sequence, 12:23797 (R;US)
ELECTRON-POSITRON INTERACTIONS
Annihilation
Baryonic decay of the J/psi and gluon spin, 12:23840 (R;FR;In French)
Hard photon processes in electron-positron annihilation at 29 GeV, 12:23838 (R;US)
Modifications in neutrino counting due to additional gauge bosons, 12:23902 (J;US)
Perturbative QCD analysis of exclusive pair production of higher-generation nucleons, 12:23897 (J;US)
Multiplicity
Small multiplicity events in $e^+ + e^- \rightarrow Z^0$ and unconventional phenomena, 12:23891 (R;US)
Pair Production
Λ production in e^+e^- annihilation at 29 GeV, 12:23844 (J;US)
Particle Production
Λ production in e^+e^- annihilation at 29 GeV, 12:23844 (J;US)
Search for the supersymmetric partners of the Z^0 and W/sup +/-/, 12:23845 (J;US)
Supersymmetry
Search for single photons at PETRA, 12:23837 (R;FR)
ELECTRONS
Acceleration
Electron beam accelerator with magnetic pulse compression and accelerator switching, 12:23265 (P;US)
Two-dimensional dynamics of the plasma wakefield accelerator, 12:23274 (J;US)
Attenuation
Low energy electron attenuation length studies in thin amorphous carbon films, 12:24061 (J;NL)
Chemical Radiation Effects
Conformational equilibria in trans-1,2-diarylethylenes manifested in their emission in solution. Part VI. Heterocyclic analogues, their triplets and exciplexes, 12:23161 (J;CH)
Particle Production
E^+e^- peaks at 1.8 MeV: Phenomenological constraints on nuclear transitions, axions, and the particle interpretation, 12:23900 (J;US)
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Recombination
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)
ELECTROPHORESIS
Tracer Techniques
Multiwire proportional chamber based system for digitizing electrophoretic gels, 12:23380 (J;NL)
ELECTROSTATIC PRECIPITATORS
Performance
Interactive computer model for calculating V-I curves in ESPS (electrostatic precipitators): Version 1.0 (for microcomputers). Model, 12:23432 (R;US)
Precipitator performance estimation procedure: Final report, 12:23429 (R;US)
User's guide for PARTIC II (Version II): A computer code for analyzing the performance of particulate-control devices, 12:22153 (R;US)
ELECTROSTATIC WAVES

Econometrics
Interactions of energy and the macroeconomy: 95 years of evidence, 12:22659 (R;US)
Research Programs
Energy and environmental information analysis program, 12:23431 (RA;US)
ENERGY ABSORPTION
Monte Carlo Method
Current biophysical approaches to the understanding of biological effects of radiation in terms of local energy deposition, 12:23633 (RA;FR)
Stopping Power
New version of the energy-deposition code D-DEP-1: better stopping powers. Final report, 12:24050 (R;US)
ENERGY CONSERVATION
The DOE Industrial Energy Conservation Program: Program summary, 12:22788 (R;US)
Cost Benefit Analysis
Cost effectiveness of park-and-ride lots in the Puget Sound region area. Final report, 12:22776 (R;US)
Financing
Innovative, cost-effective use of capital resources to induce conservation investment by commercial businesses, 12:22764 (R;US)

Meetings
ACEEE [American Council for an Energy-Efficient Economy] 1986 summer study on energy efficiency in buildings: Volume 8, Proceedings from the panel on planning/forecasting, 12:22687 (R;US)
Planning
Assistance in planning and analysis and in preparing the Energy Conservation Multi-Year Plan: Technical progress report, 12:22703 (R;US)
City of Heyburn conservation plan, 12:22798 (R;US)
Research Programs
Early results from the Hood River Conservation Project, 12:22773 (BA;US)
ORNL research programs on conservation technologies, 12:22704 (R;US)
Planning for energy conservation R and D: a review of the DOE's (Department of Energy's) planning process. Final report, 12:22705 (R;US)

ENERGY CONSUMPTION
Data Analysis
Energy use in transport: data report, 12:22785 (R;NZ)
Environmental Impacts
An integration methodology applied to the National Energy Policy Plan Environmental Assessment, 12:22663 (R;US)
Environmental trends associated with the fifth national energy policy plan, 12:22662 (R;US)
Surveys
Electric Energy Conservation and Production Project: Volume 1, Electricity use patterns, 12:22797 (R;US)

ENERGY DEMAND
Environmental Impacts
Environmental trends associated with the fifth national energy policy plan, 12:22662 (R;US)
Forecasting
Energy intensity in manufacturing: Comparison of historical results with forecasts, 12:22654 (R;US)
Model documentation for the Mini-Macroeconomic Model: MINMAC, 12:22656 (R;US)

ENERGY DEPOSITION
See ENERGY ABSORPTION

ENERGY EFFICIENCY
Education
Energy studies program at Stockton State College, 12:22745 (RA;US)
Environmental Impacts
Draft environmental impact statement on new energy-efficient homes programs: Assessing indoor air quality options: Volume 2, 12:23427 (R;US)
Marketing
Marketing energy efficiency in North Carolina public housing: lessons learned from field experience, 12:22737 (RA;US)
Research Programs
Future directions of commercial energy research: a utility perspective, 12:22711 (RA;US)
Planning for energy conservation R and D: a review of the DOE's (Department of Energy's) planning process. Final report, 12:22705 (R;US)

ENERGY EXCHANGE
See ENERGY TRANSFER

ENERGY INFORMATION ADMINISTRATION
Directories
Energy information directory, January 1987, 12:22672 (R;US)

ENERGY MANAGEMENT SYSTEMS
Computerized Control Systems
HVAC (heating, venting, and air conditioning) system fault diagnosis and energy optimization using state-space methods and modern control theory. Final report, 12:22768 (R;US)

ENERGY MODELS
Energy intensity in manufacturing: Comparison of historical results with forecasts, 12:22654 (R;US)
M Codes
Model documentation for the Mini-Macroeconomic Model: MINMAC, 12:22656 (R;US)

ENERGY OPERATORS
See HAMILTONIANS

ENERGY POLICY

FALLOUT DEPOSITS
Decontamination
Run-off of strontium with melting snow in spring, 12:23485 (R;NO)
Radionuclide Migration
Run-off of strontium with melting snow in spring, 12:23485 (R;NO)
FALLOUT PARTICULATES
See FALLOUT
FARLEY-1 REACTOR
Dothan, Alabama, USA
Electric Generators
High moisture content in generator hydrogen gas system, 12:22451 (RA;US)
FAST BREEDER TYPE REACTORS
See FBR TYPE REACTORS
FAST FLUX TEST FACILITY REACTOR
See FFTF REACTOR
FAST NEUTRONS
RBE
Analysis of mortality from different causes of death in mice exposed to fast neutrons, 12:23631 (RA;FR)
Shape of the RBE-dose relationship for fast neutrons at low doses for somatic mutations in Tradescantia, 12:23632 (RA;FR)
FASTBUS SYSTEM
Computer Codes
Review of the status of the fastbus standard routine specification, 12:24356 (J;US)
Data Transmission
The Enhanced Segment Interconnect for FASTBUS data communications, 12:24357 (J;US)
Design
FASTBUS dual-port memory and display diagnostic module, 12:23283 (J;US)
Display Devices
FASTBUS dual-port memory and display diagnostic module, 12:23283 (J;US)
Expert Systems
An investigation into the use of "expert systems" for system-wide diagnostics, 12:24355 (J;US)
Memory Devices
FASTBUS dual-port memory and display diagnostic module, 12:23283 (J;US)
FAST-MIXED SPECTRUM REACTOR
See FBR TYPE REACTORS
FATTY ACIDS
See CARBOXYLIC ACIDS
FAULT TOLERANT COMPUTERS
Specifications
Formal modeling and analysis of fault-tolerance properties for software, 12:24330 (R;US)
FBR TYPE REACTORS
See also LMFBR TYPE REACTORS
Hydrodynamics
Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 4. Results of measurement at disturbed geometry. PORGEVY 1, PORGEVY 0 variants, 12:22472 (R;CS;In Russian)
FEDERAL REGION II
Prior to June 1982, this concept was indexed to MID-ATLANTIC REGION.
Acid Rain
Effects of atmospheric exposure on roughening, recession, and chemical alteration of marble and limestone sample surfaces in the eastern United States, 12:23479 (BA;US)
FEDERAL REPUBLIC OF GERMANY
Electric Power
Electric power generation in large-scale power plants, 12:22695 (RA;DE;In German)
Energy Policy
Catalogue of criteria helping to evaluate the consequences of technological developments, 12:22651 (RA;DE;In German)
Comprehensive evaluation of the four paths developed by the Enquete-Commission on the basis of a catalogue of criteria, 12:22653 (RA;DE;In German)
Four energy paths developed by the Enquete-Commission 'Future nuclear energy policy', 12:22652 (RA;DE;In German)
Energy Sources
Energy in focus. An intermediate balance of the energy debate, 12:22657 (R;DE;In German)
Essential aspects and concepts of the energy debate, 12:22682 (RA;DE;In German)
Nuclear Power
Nuclear power, 12:22677 (RA;DE;In German)
Nuclear power - an out-of-date perspective, 12:22678 (RA;DE;In German)
Nuclear power - a reliable contribution to present and future energy supply, 12:22679 (RA;DE;In German)
Power Supplies
Comprehensive evaluation of the four paths developed by the Enquete-Commission on the basis of a catalogue of criteria, 12:22653 (RA;DE;In German)
Four energy paths developed by the Enquete-Commission 'Future nuclear energy policy', 12:22652 (RA;DE;In German)
Radioactive Waste Management
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Comparison of spent fuel management options, policies and regulations and applicability to Sweden , 12:22248 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)
Spent Fuel Storage
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Description of spent fuel management activities in each country and applicable laws and regulations , 12:22684 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. National policies and regulations, 12:22249 (R;SE)
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Executive summary, 12:22247 (R;SE)
FEDERATION OF MALAYA
See MALAYSIA
FEED MATERIALS PRODUCTION CENTER
Waste Processing
Start-up and operation of the biodenitrification demonstration facility at the FMPC [Feed Materials Production Center], 12:22291 (R;US)
FERMENTATION ALCOHOL
See ETHANOL
FERMILAB ACCELERATOR
Facility at Fermi National Accelerator Laboratory, Batavia, Illinois, includes main synchroton, booster synchrotron, and linac.
CAMAC System
An enhanced 8086-based CAMAC crate controller, 12:23282 (J;US)
FERMIONS
See also BARYONS
LEPTONS
Charge State
Fractional charges in external field problems and the inverse scattering method, 12:23928 (R;AT)
Particle Interactions
Exact calculation of ff→ffWW for the charged-current sector and comparison with the effective-W approximation, 12:23907 (J;US)
FERMIUM ISOTOPES
Fission
Bimodal fission in the shell-correction approach, 12:24022 (RA;SU)
FERRIC COMPOUNDS
See IRON COMPOUNDS

FERRITE GARNETS
Multi-Photon Processes
Two-photon-absorption cross section of Nd/sup 3+/ in yttrium aluminum garnet and yttrium lithium fluoride near 1.06 μm, 12:22963 (J;US)
Photoelasticity
Study of gadolinium-scandium-gallium garnet monocrystals by the Mandelstam-Brillouin light scattering method, 12:24113 (RA;SU;In Russian)
FERROMAGNETIC MATERIALS
Phase Diagrams
Phase diagram of the ground state of spin-1 quantum chains, 12:24127 (J;US)
FERROUS COMPOUNDS
See IRON COMPOUNDS
FERTILITY
Biological Radiation Effects
Fertility following neonatal gamma irradiation, 12:23635 (RA;IL)
FETUSES
Congenital Malformations
Cytogenetic and developmental studies of embryonic abnormalities induced by, 12:23701 (RA;US)
Exposure of female mice to ethylene oxide within hours after mating leads to fetal malformation and death, 12:23700 (RA;US)
Nature of strain differences in spermatogonial responses to radiation, 12:23655 (RA;US)
Synergistic and antagonistic interactions of two radiation-induced dominant skeletal mutations in mice, 12:23702 (RA;US)
FEYNMAN PATH INTEGRAL
Semiclassical Approximation
Feynman path integrals and the classical limit, 12:24165 (R;DE)
FFTF REACTOR
Westinghouse Hanford Company, Richland, Washington
Reactor Cooling Systems
Analysis of the natural convective air cooling tests in the FFTF [Fast Flux Test Facility] interim decay storage vessel, 12:22515 (R;US)
FIBERS
Optical Microscopy
Particle and fiber identification by optical microscopy: Final report, 12:23385 (R;US)
FIBROBLASTS
Proton Microprobe Analysis
Microprobe analysis of human fibroblasts, 12:23051 (RA;AU)
FIELD EMISSION
Computerized Simulation
Space charge limited emission tests of the DPC computer code, 12:23273 (R;US)
FIELD THEORIES
See also QUANTUM FIELD THEORY
Progress report October 1985-September 1986 of the Institute for Theoretical Physics, University of Graz, Austria, 12:24322 (R;AT;In German)
Conformal Invariance
Conformally covariant coupled non-linear field theory on the hypercone: Vacuum solutions and quantization of normal modes, 12:23916 (R;XA)
FIELDS (ELECTROMAGNETIC)

FINITE ELEMENT METHOD
Calculation Methods
Derivative calculation from finite element solutions, 12:24375 (J;NL)
FINITE-RANGE INTERACTIONS
Perturbation Theory
Point interactions in nuclear physics, 12:24173 (RA;CS;In Czech)
FIRE HAZARDS
Combustion Products
Fire and smoke: understanding the hazards. Final report, January 1985-August 1986, 12:23434 (R;US)
Risk Assessment
Assessment of the fire hazard in nuclear facilities, 12:22521 (R;DE;In German)
Smokes
Fire and smoke: understanding the hazards. Final report, January 1985-August 1986, 12:23434 (R;US)
FIRE STATIONS
See PUBLIC BUILDINGS
FIREDAMP
See METHANE
FISHES
Mortality
Linking laboratory and field responses of fish populations to acidification, 12:23523 (J;NL)
Reproduction
Linking laboratory and field responses of fish populations to acidification, 12:23523 (J;NL)
Survival Curves
Linking laboratory and field responses of fish populations to acidification, 12:23523 (J;NL)
FISSION NEUTRONS
Biological Radiation Effects
Comparative biological effects of low dose, low dose-rate exposures to fission neutrons from the JANUS reactor or to Co-60 gamma rays, 12:23676 (J;US)
Neutron Spectroscopy
Fission neutron time-of-flight spectrometer, 12:23354 (RA;CS;In Slovak)
FISSION PRODUCTS
Chemistry
Investigation of chemical behaviour of the fission products during accidental releases, 12:22546 (RA;XM;In Russian)
Computer Codes
Investigation of chemical behaviour of the fission products during accidental releases, 12:22546 (RA;XM;In Russian)
Reaction Product Transport Systems
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
Separation Processes
Separation of ionic solutes. Abstracts of papers, 12:23021 (R;CS;In English and Russian)
Solvent Extraction
Separation of fission products by solvent extraction with dicarbollide in radioanalytical chemistry and technology, 12:23025 (RA;CS)
FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT
FISSURED FORMATIONS
See FRACTURED RESERVOIRS
FLAGYL
See METRONIDAZOLE
FLAMES
Velocity
Conditional sampling of velocity and scalars in turbulent flames using simultaneous LDV-Raman scattering, 12:23187 (J;DE)
FLASKS
See CASKS
FLAWS
See DEFECTS
FLOW CYTOMETERS
See CELL FLOW SYSTEMS
FLOW (FLUID)
See FLUID FLOW

FLOW MODELS
Isotope Ratio
Use of linear compartmental simulation approach for quantitative interpretation of isotope data under time variant flow conditions, 12:23506 (RA;XA)
Simulation
Use of linear compartmental simulation approach for quantitative interpretation of isotope data under time variant flow conditions, 12:23506 (RA;XA)
FLOW RATE
Tracer Techniques
Flow-rate measurement using radioactive tracers and transit time method, 12:23226 (R;FI;In Finnish)
FLOWMETERS
On-Line Measurement Systems
Flow-rate measurement using radioactive tracers and transit time method, 12:23226 (R;FI;In Finnish)
FLUE GAS
Denitrification
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)
Desulfurization
Lime-spray-dryer flue-gas desulfurization computer model user's manual. Final report, January 1982-April 1986, 12:22436 (R;US)
Sulfur dioxide removal from flue gases by supported copper and iron absorbents: Technical report No. 2, 11/16/86-2/15/87, 12:22157 (R;US)
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)
Scrubbing
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)
FLUENCE (NEUTRON)
See NEUTRON FLUENCE
FLUID FLOW
See also GAS FLOW
MULTIPHASE FLOW
TURBULENT FLOW
TWO-PHASE FLOW
Motion-dependent fluid forces acting on a tube row in crossflow, 12:23220 (R;US)
FLUIDIZED BED BOILERS
Feasibility Studies
Fluidized-bed boiler assessment for Navy applications. Final report, October 1983-September 1985, 12:23247 (R;US)
FLUIDIZED-BED COMBUSTORS
Design
Effect of operating and design parameters on fluidized bed combustor in-bed tube metal wastage: Experimentation test plan: Quarterly report, 12:22170 (R;US)
Experiment Planning
Effect of operating and design parameters on fluidized bed combustor in-bed tube metal wastage: Experimentation test plan: Quarterly report, 12:22170 (R;US)
Temperature Distribution
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)
Test Facilities
Effect of operating and design parameters on fluidized bed combustor in-bed tube metal wastage: Experimentation test plan: Quarterly report, 12:22170 (R;US)
FLUORESCENCE SPECTROSCOPY
Interfering Elements
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)
FLUORIMETRY
See FLUORESCENCE SPECTROSCOPY
FLUORODEOXYURIDINE
See FUDR
FLUTE INSTABILITY
Stabilization
Computational study of ion cyclotron frequency stabilization of the m = 1 interchange mode in mirror geometry, 12:24270 (J;US)
FLUX (COSMIC RAY)
See COSMIC RAY FLUX
FLY ASH
Activation Analysis
Instrumental neutron activation analysis of fly ash and aerosols, 12:23005 (RA;CS;In Czech)
Mutagen Screening
Correlation of nitroaromatic compounds with the mutagenic activity of coal fly ash, 12:22179 (J;US)
Natural Radioactivity
Study on /sup 226/Ra concentrations in the CFP plant areas and on the radioactivity of lignites and cements containing fly ash, 12:23452 (R;GR;In Greek)
Waste Product Utilization
Utilization potential of coal combustion by-products: Somerset Power Plant case study: Final report, 12:22158 (R;US)
FOLIAGE
See LEAVES
FOOD
See also MEAT
MILK
Radurization
Microbiology and radurization of dehydrated food products, 12:23622 (RA;ZA)
FOOD CHAINS
Mathematical Models
Intercomparison of the terrestrial food chain models FOOD-MARC and ECOSYS, 12:23484 (R;DE)
Radionuclide Kinetics
Intercomparison of the terrestrial food chain models FOOD-MARC and ECOSYS, 12:23484 (R;DE)
FOODSTUFFS
See FOOD
FORECASTING
Time-Series Analysis
Role of linear recursive estimators in time series forecasting, 12:24364 (J;US)
FORESTS
Response Modifying Factors
Responses of forests to atmospheric deposition. National research plan for the Forest response program. User's guide, 12:23438 (R;US)
Sulfur Cycle
Sulfur cycling in five forest ecosystems, 12:23477 (J;NL)
FORMALDEHYDE
Carcinogenesis
Induction and progression of neoplasia in the respiratory tract, 12:22177 (RA;US)
FORMALIN

Research Programs

Historically Black Colleges and Universities Fossil Energy Faculty Research Training Program: FY1986 annual report, 12:24311 (R;US)

FOSSIL-FUEL POWER PLANTS

Air Pollution Abatement

Controlling pollutant emissions through the supplemental use of natural gas: Phase 1 - bench-scale screening studies. Phase 2 - flow-field evaluation and mixing. Topical report, April 1984-July 1985, 12:22437 (R;US)

Lime-spray-dryer flue-gas desulfurization computer model user's manual. Final report, January 1982-April 1986, 12:22436 (R;US)

Air Pollution Control

Evaluation of the PM burner: A low-NO/sub x/ pulverized-coal-firing system for tangentially fired utility boilers: Final report, 12:22417 (R;US)

Boilers

Boiler design criteria for dry sorbent SO_2 control with low-NOx burners: new unit applications. Final report, October 1985-March 1986, 12:22435 (R;US)

Corrosion-product transport in a cycling fossil plant: Final report (Cycling operations), 12:22416 (R;US)

Environmental Effects

Monitoring the fate of chlorine from MSW sampling through combustion, 12:22412 (RA;US)

Fire Prevention

Prevention, detection, and control of coal pulverizer fires and explosions: Final report, 12:22418 (R;US)

Flue Gas

Monitoring the fate of chlorine from MSW sampling through combustion, 12:22412 (RA;US)

Fuels

Controlling pollutant emissions through the supplemental use of natural gas: Phase 1 - bench-scale screening studies. Phase 2 - flow-field evaluation and mixing. Topical report, April 1984-July 1985, 12:22437 (R;US)

Information Systems

Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)

Lignite

Transportation of lignite to the North Island. Technical and economic evaluation of options. Summary report, 12:22166 (R;US)

Surveys

Prevention, detection, and control of coal pulverizer fires and explosions: Final report, 12:22418 (R;US)

FOUNDRIES

Particulates

Gray-iron foundry industry particulate emissions: source category report. Final report, June 1983-August 1986, 12:23442 (R;US)

FRACTURE PROPERTIES

Correlations

Fracture toughness correlations, 12:22875 (R;FI;In Finnish)

FUDR

Biological Effects

Changes in histone H1 content and chromatin structure of cells blocked in early S phase by 5-fluorodeoxyuridine and aphidicolin, 12:23555 (J;US)

FUEL ASSEMBLIES

Burnup

Spent fuel measurements at Loviisa Nuclear Power Station May 1982, 12:22459 (R;FI)

Neutron Radiography

Neutron tomography of damaged fuel assemblies, 12:23238 (J;US)

Nondestructive Testing

Spent fuel measurements at Loviisa Nuclear Power Station May 1982, 12:22459 (R;FI)

Shear Properties

Experimental research of local hydrodynamic characteristics of fast reactor fuel assembly peripheral zone. 4. Results of measurement at disturbed geometry. PORGEVY 1, PORGEVY 0 variants, 12:22472 (R;CS;In Russian)

FUEL CANS

Failure Mode Analysis

BETL-B code for calculation of the fuel element cladding temperature during accidents, 12:22551 (RA;XM;In Russian)

Post-Irradiation Examination

Post-irradiation research of prospective zirconium alloys, 12:22838 (RA;CS;In Czech)

Temperature Distribution

BETL-B code for calculation of the fuel element cladding temperature during accidents, 12:22551 (RA;XM;In Russian)

Wear
LWBR development program: Flow-induced vibrational wear behavior of zircaloy clad simulated fuel rods in a grid support system, 12:22473 (R;US)

FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Feasibility Studies
Development of molten carbonate fuel cell at IHI (Ishikawajima-Harima Heavy Industries), 12:22698 (R;JP)

FUEL CYCLE
A Codes
UFRACAM: a computer code for the evaluation of uranium feed requirements and fresh fuel cost items subject to optimum tails assay, 12:22251 (R;EG)
Cost
UFRACAM: a computer code for the evaluation of uranium feed requirements and fresh fuel cost items subject to optimum tails assay, 12:22251 (R;EG)

FUEL ELEMENT FAILURE
Multiphase Flow
Numerical simulation of multiphase-multicomponent-flow after fuel rod failure in a sodium filled coolant channel, 12:22469 (R;DE;In German)

FUEL ELEMENTS

GADOLINIUM
Absorption Spectroscopy
Possible determination of gadolinium in uranium, 12:23014 (RA;CS;In Czech)
GADOLINIUM 158
Energy-Level Transitions
/sup 158/Tb decay and possibility of more precise determination of electron neutrino mass, 12:23977 (R;SU;In Russian)
Excited States
On the /sup 158/Tb decay: impossibility of neutrino balance, 12:23976 (RA;SU;In Russian)
GADOLINIUM BASE ALLOYS
Electric quadrupole interaction in /sup 157/Dy-Gd system, 12:23975 (RA;CS;In Czech)
GADOLINIUM COMPOUNDS
Brillouin Effect
Study of gadolinium-scandium-gallium garnet monocrystals by the Mandelstam-Brillouin light scattering method, 12:24113 (RA;SU;In Russian)
GADOLINIUM ISOTOPES
See also GADOLINIUM 158
Mass Spectroscopy
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
GALAXIES
Bending
Theory of galactic disks and its relevance to the solar wind magnetic configuration, 12:23750 (RA;FR)
Solar Wind
Theory of galactic disks and its relevance to the solar wind magnetic configuration, 12:23750 (RA;FR)
GALLIUM ARSENIDE SOLAR CELLS
Annealing
Experimental test of minority-carrier annealing on gallium arsenide solar cells using forward-biased current. Master's thesis, 12:22362 (R;US)
Physical Radiation Effects
Experimental test of minority-carrier annealing on gallium arsenide solar cells using forward-biased current. Master's thesis, 12:22362 (R;US)
GALLIUM ARSENIDES
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
Electronic Structure
Energy spectra of donors and acceptors in quantum-well structures: Effect of spatially dependent screening, 12:22964 (J;US)
Growth and characterization of GaAs/AlAs superlattice alloys, 12:22960 (R;US)
Energy Gap
Bandgap energy pressure coefficients in strained-layer structures, 12:22962 (R;US)
Energy Spectra
Energy spectra of donors and acceptors in quantum-well structures: Effect of spatially dependent screening, 12:22964 (J;US)
Radiation Scattering Analysis
Backscattering analysis of AuGe-Ni ohmic contacts of n-GaAs, 12:23038 (RA;AU)
Superlattices
Growth and characterization of GaAs/AlAs superlattice alloys, 12:22960 (R;US)
GALLIUM COMPOUNDS
See also GALLIUM ARSENIDES
GALLIUM PHOSPHIDES
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)

GALLIUM PHOSPHIDES
Energy Gap
Bandgap energy pressure coefficients in strained-layer structures, 12:22962 (R;US)
GAMMA DETECTION
Optical bench measurements of ionizing radiation characteristics, 12:23361 (RA;CS;In Slovak)
GAMMA DOSIMETRY
Chemical Dosemeters
Dosimetric characteristics of the chlorobenzene-ethanol-trimethylpentane (CET) system and DL-M4 dosimeter for neutrons produced by neutron generator and cyclotron, 12:23331 (RA;FR)
Spatial distribution of free radicals produced by neutrons, 12:23332 (RA;FR)
Depth Dose Distributions
New trends in the ICRU sphere, 12:24067 (RA;FR)
Dose Equivalents
Neutron and photon fluence-to-dose conversion factors for active marrow of the skeleton, 12:24069 (RA;FR)
Problems of a consistent assessment of the individual dose in mixed neutron-photon radiation fields, 12:24065 (RA;FR)
Electron Spin Resonance
Spatial distribution of free radicals produced by neutrons, 12:23332 (RA;FR)
Ionization Chambers
Characteristics of high-pressure ionization chambers with several filling gases in neutron and photon fields, 12:23319 (RA;FR)
Determination of dose components in mixed gamma neutron fields by use of high pressure ionization chambers, 12:23320 (RA;FR)
Neutron response of ion chamber photon dosemeters for neutron energies between 144 keV and 15.5 MeV, 12:23322 (RA;FR)
Lyoluminescence
Spatial distribution of free radicals produced by neutrons, 12:23332 (RA;FR)
Proportional Counters
Development and use of a tissue equivalent proportional counter analysis system to measure the dose delivered to the gut of an anthropomorphic phantom from a fission source, 12:23295 (RA;FR)
Thermoluminescent Dosemeters
Application of a personal computer for analysis and data reduction of TLD-300 glow curves for dosimetry in mixed neutron and photons fields, 12:23326 (RA;FR)
Laser heated thermoluminescence dosimetry of mixed neutron-gamma fields, 12:23329 (RA;FR)
Response of CaF_2:TM (TLD-300) to monoenergetic fast neutrons, 12:23327 (RA;FR)
Spectral dependence of response coefficients and applicability of the two-peak TLD method in mixed neutron-photon radiation fields, 12:23325 (RA;FR)
Use of TLD-detectors for reactor mixed field dosimetry, 12:23328 (RA;FR)
GAMMA LOGGING
Solution Mining
Direct uranium determination in boreholes by semiconductor gamma spectrometry using 1001.4 keV line - laboratory testing of method with respect to specific conditions of deposit exploited with hydrochemical techniques, 12:23010 (RA;CS;In Czech)
GAMMA RADIATION
Biological Radiation Effects
Comparative biological effects of low dose, low dose-rate exposures to fission neutrons from the JANUS reactor or to Co-60 gamma rays, 12:23676 (J;US)
GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS
GAMMA SPECTROMETERS
Low Level Counting
Background suppression in large low-level shield, 12:23355 (RA;CS;In Slovak)
GAMMA-RAY LASERS
See GASERS
GARNETS
For silicate garnets only.
Chemical Composition
Neodymium ion distribution in Nd YAG crystals, 12:22945 (RA;IL)
GAS ANALYSIS
Mass Spectrometers
Calibration of mass spectrometers for quantitative gas mixture analysis, 12:23389 (J;US)
Measuring Instruments
Gas dynamics in residual gas analyzer calibration, 12:23210 (J;US)
Standards
Stability of parts-per-million organic cylinder gases and results of source test analysis audits: Status Report 8, 12:23440 (R;US)
GAS CHROMATOGRAPHY
Calibration Standards
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
GAS COOLANTS
See GASES
GAS ENGINES

GENES
Biological Functions
Enzyme regulation, 12:23691 (RA;US)
Cloning
Genetic control of mutagenesis and DNA repair, 12:23560 (RA;US)
Polymorphism in the ribosomal RNA genes in three heterothallic species of Neurospora, 12:23571 (J;US)
Detection
Colony hybridization with synthetic biotinylated and /sup 32/P-labelled DNA probes for the detection of Escherichia Coli ST and LT genes, 12:23537 (RA;ZA)
Inactivation
Studies on T(X;7)18Rl, an X-7 translocation in which non-inactivation of one translocation product is demonstrable, 12:23704 (RA;US)
Molecular Structure
Polymorphism in the ribosomal RNA genes in three heterothallic species of Neurospora, 12:23571 (J;US)
Transcription
Studies of RNA processing and turnover and EGF stimulation of transcription, 12:23545 (RA;US)
GENETIC RADIATION EFFECTS
DNA Repair
Genetic effects of ionizing radiation and repair processes, 12:23651 (R;AT;In German)
Low Dose Irradiation
Genetic effects of ionizing radiation and repair processes, 12:23651 (R;AT;In German)
GENETICS
Meetings
First joint congress of the South African Biochemical Society, South African Genetics Society and the South African Society for Microbiology at the University of the Witwatersrand, 29 June-4 July 1986, 12:23542 (R;ZA)
Research Programs
Mammalian cytogenetics, 12:23561 (RA;US)
GENOME MUTATIONS
Radioinduction
Molecular genetic analysis of regions of the murine genome associated with radiation-induced mutations, 12:23660 (RA;US)
GEOCHEMISTRY
Mathematical Models
Study of the coupling of geochemical models based on thermodynamic equilibrium with transfer models of components in solutions through porous or fissured media, 12:22281 (R;FR;In French)
GEOCHRONOLOGY
See AGE ESTIMATION
GEOLOGIC DEPOSITS

GREECE
Clays
Uraniferous lignites and bituminous clays of the Serres Basin. Pt. A (E. Macedonia, Greece), 12:22227 (R;GR;In Greek)
Geochemical Surveys
Report on the results from the 3rd phase geochemical stream sediment and water sampling in the Vathyrema area (Drama Dept.) (E. Macedonia, Greece), 12:22228 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2523-2522 Thrace, 12:22234 (R;GR;In Greek)
Ground Water
Isotope hydrology study of the Louros riverplain area (Epirus, Greece), 12:23526 (R;GR;In Greek)
Hydrology
Isotope hydrology study of the Louros riverplain area (Epirus, Greece), 12:23526 (R;GR;In Greek)
Lignite
Uraniferous lignites and bituminous clays of the Serres Basin. Pt. A (E. Macedonia, Greece), 12:22227 (R;GR;In Greek)
Radiometric Surveys
Car-borne and on foot scintillometer survey of the Aegean Sea Islands (Greece). Pt. A, 12:22230 (R;GR;In Greek)
Car-borne and on foot scintillometer survey of the Aegean Sea Islands (Greece). Pt. B, 12:22233 (R;GR;In Greek)
Car-borne scintillometer survey in Thessaly and Euboea Island, 12:22226 (R;GR;In Greek)
Geology and radiometry of West Macedonia (Greece), 12:22231 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2623(II,III)-2622 Thrace, 12:22232 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2523-2522 Thrace, 12:22234 (R;GR;In Greek)
Uranium Deposits
Uraniferous lignites and bituminous clays of the Serres Basin. Pt. A (E. Macedonia, Greece), 12:22227 (R;GR;In Greek)
Uranium Ores
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2623(I,IV)-2624-2723-2724 Thrace, 12:22229 (R;GR;In Greek)
GREEK RESEARCH REACTOR
See DEMOCRITUS REACTOR
GRINDING MACHINES
Comparative Evaluations
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)
GROSS-NEVEU MODEL
See LAGRANGIAN FIELD THEORY
GROUND WATER
Chemical Composition
Computer modelling of confined aquifer systems for interpretation of chemical and environmental isotope data, 12:23504 (RA;XA)
Determination of geochemical characters of insterstitial waters of pleistocene Italian clay formations, 12:23527 (R;FR;In Italian)
Flow Models
A comparative study of sensitivity coefficient calculation methods in groundwater flow, 12:23724 (R;US)
Coupling of transport and geochemical models, 12:22282 (R;FR)
Mathematical modelling of fracture hydrology, 12:22280 (R;FR)
Geochemistry
Report on intercomparison studies of computer programs which respectively model: I) radionuclide migration II) equilibrium chemistry of groundwater, 12:22283 (R;FR)
Hazardous Materials
Mathematical model for engineering the venting of volatile groundwater contaminants. Final report on Phase 1, 15 February-31 July 1984, 12:23435 (R;US)
Hydrology
Ground-water monitoring and modeling at the Hanford Site, 12:23531 (R;US)
Mathematical models for interpretation of tracer data in groundwater hydrology. Proceedings of an advisory group meeting held in Vienna, 17-21 September 1984, 12:23499 (R;XA)
Report on the environmental isotopic investigations in Lower Kelantan River Basin, Malaysia (Part 3). IAEA Regional Cooperative Agreement (MAL2623/R1/AG), 12:23512 (R;MY)
Report on the environmental isotopic investigations in Kedah and Perlis Area, Malaysia (Part 1). IAEA Regional Cooperative Agreement (MAL2623/R1/AG), 12:23513 (R;MY)
Use of environmental isotopes in hydrogeological studies in Kedah and Perlis, Malaysia. Project proposal summary, 12:23508 (R;MY)
Isotope Applications
Preliminary study of the environmental isotopes in hydrology in the Lower Kelantan River Basin, Kelantan, Malaysia. IAEA Regional Cooperative Agreement. Project 13 - isotope hydrology and sedimentology, 12:23509 (R;MY)
Report on the environmental isotopic investigations in Lower Kelantan River Basin, Malaysia. (Part II). IAEA Regional Cooperative Agreement MAL2623/R1/AG, 12:23511 (R;MY)
Isotope Ratio
Computer modelling of confined aquifer systems for interpretation of chemical and environmental isotope data, 12:23504 (RA;XA)
Isotope hydrology study of the Louros riverplain area (Epirus, Greece), 12:23526 (R;GR;In Greek)
Monitoring
Ground-water monitoring and modeling at the Hanford Site, 12:23531 (R;US)
Potentiometric-level monitoring program, Mississippi and Louisiana: Annual status report for fiscal year 1985 (Richton and Cypress Creek Domes, M5 and Vacherie Dome, LA), 12:22253 (R;US)
Pollutants
Application of a transport-diffusion model to a coastal aquifer utilizing in situ measurements of dispersivity, 12:23505 (RA;XA)
Quantitative Chemical Analysis
Laser photoacoustic spectroscopy for trace level detection of actinides in groundwater, 12:22985 (R;US)
Radionuclide Migration
Onsite disposal of radioactive waste: Methodology for the radiological assessment of disposal by subsurface burial, 12:22300 (R;US)

SWIFT [Sandia Waste Isolation Flow and Transport] II self-teaching curriculum: Illustrative problems for the Sandia Waste-Isolation Flow and Transport model for fractured media, 12:22327 (R;US)
Tracer Techniques
Role of tracer data for modeling soil-water flow in the unsaturated zone, 12:23502 (RA;XA)
Water Chemistry
Hydrogeochemical data for thermal and nonthermal waters and gases of the Valles Caldera- southern Jemez Mountains region, New Mexico, 12:22392 (R;US)
Water Pollution
An examination of models of issue development: Environmental scanning using on-line databases: Final report (Acid rain, PCBs, thermal pollution, ground water pollution), 12:22694 (R;US)
Water Pollution Abatement
Ground-water protection activities of the US Nuclear Regulatory Commission, 12:23533 (R;US)
Water Pollution Monitors
Borehole sensing methods for ground-water investigations at hazardous-waste sites. Summary report, 12:23520 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GROUP THEORY
For mathematical groups only; for neutron-energy groups use MULTIGROUP THEORY.
K-Kolmogorov homology groups, 12:24146 (R;XA)
K-Kolmogorov cohomology groups, 12:24154 (R;XA)
GRR REACTOR
See DEMOCRITUS REACTOR
GUANYLIC ACID
Labelling
Enzymic preparation of (γ-/sup 32/P)ATP, (α-/sup 32/P)dGTP and (α-/sup 32/P) GTP, 12:23538 (RA;ZA)
Purification
Enzymic preparation of (γ-/sup 32/P)ATP, (α-/sup 32/P)dGTP and (α-/sup 32/P) GTP, 12:23538 (RA;ZA)
GYROTRONS
See MICROWAVE AMPLIFIERS

H

HADRON-HADRON INTERACTIONS
Elastic Scattering
Amplitude of hadron-hadron elastic interaction in a model with σsub(el)/σsub(tot) -> 1 at superhigh energies, 12:23862 (R;SU;In Russian)
Multiple Production
Regularities found in average charged particle multiplicity in inelastic hadron interactions, 12:23829 (RA;CS;In Czech)
Particle Production
Explicit formulae for heavy flavour production, 12:23895 (J;NL)
Scattering Amplitudes
Amplitude of hadron-hadron elastic interaction in a model with σsub(el)/σsub(tot) -> 1 at superhigh energies, 12:23862 (R;SU;In Russian)
HADRONIC ATOMS
Fine Structure
Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)
HAFNIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Solvent Extraction
Extraction of Hf(IV) from mineral acid solutions by diphenylphosphinic acid in chloroform, 12:23031 (RA;CS)
HAFNIUM 177 TARGET
Neutron Reactions
Nuclear structure studies on /sup 178/Hf by means of neutron induced gamma and electron spectroscopy, 12:23972 (R;DE;In German)
HAFNIUM 178
De-Excitation
Nuclear structure studies on /sup 178/Hf by means of neutron induced gamma and electron spectroscopy, 12:23972 (R;DE;In German)
Energy Levels
Nuclear structure studies on /sup 178/Hf by means of neutron induced gamma and electron spectroscopy, 12:23972 (R;DE;In German)
HAFNIUM ALLOYS
Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)
Formation Heat
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)
HAFNIUM CARBIDES
Microanalysis
Scanning Auger microanalysis (SAM) studies of carbide coatings of titanium, zirconium and hafnium, 12:22923 (R;US)
HAIR
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
HALIDES
Quantitative Chemical Analysis
Lanthanum and silver nitrate mixed titrants laid to rest, 12:23089 (J;US)
HALLEY COMET
Vega Space Probes
Comet Halley: nucleus and jets. Results of the VEGA mission, 12:23762 (R;HU)
HALOGENATED ALIPHATIC HYDROCARBONS
Chemical Reactions
Structure-reactivity relationships for predicting environmentally hazardous chemicals. Final report, 1983-1986, 12:23110 (R;US)
HAM
See MEAT
HAMILTON OPERATORS
See HAMILTONIANS
HAMILTONIANS
Shell Models
Thermal response of hot nuclei, 12:24045 (BA;US)
Temperature Effects
Thermal response of hot nuclei, 12:24045 (BA;US)
HAMSTERS
Neoplasms
Potential for boron neutron capture enhancement of Cf-252 brachytherapy treatment of localized tumors, 12:23591 (J;US)
HANDLING (WASTES)
See WASTE MANAGEMENT
HANFORD RESERVATION
Decommissioning
Environmental assessment of the F Area decommissioning program, Hanford site, Richland, Washington, 12:22326 (R;US)
Reactor Decommissioning
Environmental assessment of the F Area decommissioning program, Hanford site, Richland, Washington, 12:22326 (R;US)
HARD FACING
Microanalysis
Scanning Auger microanalysis (SAM) studies of carbide coatings of titanium, zirconium and hafnium, 12:22923 (R;US)

HARD SURFACING
See HARD FACING
HASTELLOY C
Fracture Properties
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
Laser Welding
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
Metallography
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
Thermal Conductivity
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
HASTELLOY X
Permeability
Mechanism of hydrogen-permeation through oxidized metals, 12:22846 (R;DE;In German)
Protective Coatings
Mechanism of hydrogen-permeation through oxidized metals, 12:22846 (R;DE;In German)
HATCH-2 REACTOR
Cracks
Evaluation of the vent header crack at Edwin I. Hatch Unit #2 Nuclear Power Station, 12:22612 (BA;US)
Failure Mode Analysis
Evaluation of the vent header crack at Edwin I. Hatch Unit #2 Nuclear Power Station, 12:22612 (BA;US)
Fracture Mechanics
Evaluation of the vent header crack at Edwin I. Hatch Unit #2 Nuclear Power Station, 12:22612 (BA;US)
HAZARDOUS MATERIALS
Not for radioactive materials.
SOILINER Version 1 (for microcomputers). Software, 12:23475 (R;US)
Chemical Reactions
Structure-reactivity relationships for predicting environmentally hazardous chemicals. Final report, 1983-1986, 12:23110 (R;US)
Land Pollution
Borehole sensing methods for ground-water investigations at hazardous-waste sites. Summary report, 12:23520 (R;US)
Research Programs
Chemical hazard evaluation program, 12:22665 (RA;US)
Transport
Transportation of hazardous materials in Arizona. Volume 1. Comprehensive study approach, analyses and findings, 12:22667 (R;US)
Transportation of hazardous materials in Arizona. Volume 2. Hazardous materials data base management system: development and programs, 12:22668 (R;US)
Transportation of hazardous materials in Arizona. Volume 3. Executive summary, 12:22669 (R;US)
Vapors
Mathematical model for engineering the venting of volatile groundwater contaminants. Final report on Phase 1, 15 February-31 July 1984, 12:23435 (R;US)
Waste Disposal
Geotechnical analysis for dike stability (GARDS) (for microcomputers). Software, 12:23519 (R;US)
Geotechnical analysis for review of dike stability (GARDS). Technical manual. Final report, October 1985-September 1986, 12:23518 (R;US)
Hazardous waste site assessment: Inactive landfill, Site 300, Lawrence Livermore National Laboratory, 12:23493 (R;US)
Serious reduction of hazardous waste: for pollution and industrial efficiency, 12:22670 (R;US)
Southeast Chicago study: an assessment of environmental pollution and public-health impacts. Final report, 12:22666 (R;US)
Waste Transportation
Assessment of state and local notification requirements for transportation of radioactive and other hazardous materials. Final report, 12:22306 (R;US)
HBTX DEVICES
Fluctuations
Physics of Reversed Field Pinch, 12:24213 (RA;FR)
Plasma Instability
Physics of Reversed Field Pinch, 12:24213 (RA;FR)
HCDA

Hydrogen deflagration tests in hydro-sc facility, 12:22576 (RA;US)
Impact of a hydrogen ignition system on degraded core accident in a Mark III containment, 12:22579 (RA;US)
Scaling and extrapolation of hydrogen distribution experiments, 12:22577 (RA;US)
Two aspects of hydrogen risk, 12:22578 (RA;US)
Consumption Rates
Coal conversion and hydrogen utilization in catalytic liquefaction at low temperatures, 12:22104 (RA;US)
Diffusion
Mechanism of hydrogen-permeation through oxidized metals, 12:22846 (R;DE;In German)
Ionization
Two-color, Doppler-free ionization of molecular hydrogen for isotopic analysis, 12:23093 (R;US)
Ion-Molecule Collisions
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)
Research Programs
Hydrogen R and D programs of the U.S. Department of Energy, 12:22351 (BA;US)
Spatial Distribution
Hydrogen depth profiling in Zr-2.5 wt% Nb alloy, 12:22834 (RA;IL)
Thermal Diffusion
Thermotransport of hydrogen in Zr-2.5 wt% Nb alloy, 12:22833 (RA;IL)
Transport
A summary status of advanced water electrolysis and hydrogen storage/transport R and D, 12:22352 (BA;US)
Trapping
Hydrogen trapping due to volume imperfections in iron based alloys, 12:22832 (RA;IL)
Vibrational States
Time evolution of vibrational states of hydrogen molecule adsorbed on Fe(111) surface, 12:23805 (R;XA)
HYDROGEN 1
Membrane Transport
Determination of the entrance rate and release rate constants and of the diffusion rate constants of hydrogen and deuterium for Inconel 600, by means of permeation measurements and the observation of recycling in the tokamak TEXTOR, 12:24293 (R;DE;In German)
HYDROGEN 1 TARGET
Alpha Reactions
Peculiarities of deuteron production in /sup 4/He-proton interactions, 12:23945 (R;SU)
Deuteron Reactions
Study of production and properties of neutrons in nucleus-nucleus collisions at energies up to 5 GeV/nucleon, 12:23935 (RA;CS;In Czech)
Electron Reactions
Electron scattering from nuclei at several GeV, 12:24047 (BA;US)
HYDROGEN 2

Z NEUTRAL BOSONS
Decay
Hyperphoton production in W-boson decay, 12:23898 (J;US)
INTERMETALLIC COMPOUNDS
Electron Beam Welding
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
Fracture Properties
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
INTERNAL COMBUSTION ENGINES
See also DIESEL ENGINES
GAS TURBINE ENGINES
Noise
Study on piston slap-induced noise and vibration of internal combustion engine - theoretical analysis and simulation, 12:22804 (R;JP)
Unsteady Flow
Calculation of 2-dimensional unsteady flow in inlet pipes and its application for V-8 engines, 12:22802 (R;JP)
INTERNAL IRRADIATION
Personnel Dosimetry
Determination of radionuclides in wounds, 12:23642 (RA;XM;In Russian)
INTERNAL PAIR PRODUCTION
Gamma Spectroscopy
Internal pair production in nuclear alpha decay, 12:23982 (RA;CS;In Slovak)
INTERNATIONAL TOKAMAK REACTOR
See INTOR TOKAMAK
INTERPLANETARY MAGNETIC FIELDS
Auroral Oval
Dynamics of the equatorward boundary of the auroral oval, 12:23781 (R;US)
Solar Wind
Characteristics of polar-cap precipitation and their dependence on the interplanetary magnetic field and the solar wind, 12:23780 (R;US)
INTERPLANETARY SPACE
Shock Waves
Collisionless shock waves in space, 12:23746 (RA;FR)
INTERPOLATION
Algorithms
Monotone piecewise bicubic interpolation, 12:24185 (J;US)
INTOR TOKAMAK
International Tokamak Reactor.
Impurities
Self-pumping inpurity control systems for INTOR, 12:24279 (R;US)
Optimization
On the tokamak β - values limited by ideal MHD-stability, 12:24201 (RA;FR)
IODINE
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
IODINE 125
Radiochemistry
Biotinylated insulin: preparation and assay, 12:23176 (RA;ZA)
Production technology of sodium /sup 125/I-iodide, 12:23171 (RA;CS;In Czech)
IODINE 127 TARGET
Neutron Reactions
Determination of iodine 129 in environmental samples from Austria by neutron activation analysis. Working methods and results (1984-1985), 12:23417 (R;AT;In German)
IODINE 129
Activation Analysis
Determination of iodine 129 in environmental samples from Austria by neutron activation analysis. Working methods and results (1984-1985), 12:23417 (R;AT;In German)
Isotope Ratio
Measurement of the $^{129}I/^{131}I$ ratio in Chernobyl fallout, 12:23451 (R;US)
Uptake
Determination of iodine 129 in environmental samples from Austria by neutron activation analysis. Working methods and results (1984-1985), 12:23417 (R;AT;In German)
IODINE 129 TARGET
Neutron Reactions
Determination of iodine 129 in environmental samples from Austria by neutron activation analysis. Working methods and results (1984-1985), 12:23417 (R;AT;In German)
IODINE 131
Adsorption
Separation of ionic radioiodine by selective sorbents with increased dynamic efficiency, 12:23022 (RA;CS)
Fission Product Release
Methods to determine iodine plate-out, 12:22243 (R;DK)
Isotope Ratio
Measurement of the $^{129}I/^{131}I$ ratio in Chernobyl fallout, 12:23451 (R;US)
Isotopic Exchange
Liver diagnosis using bromosulfophthalein labelled with iodine radionuclides, 12:23173 (RA;CS;In Czech)
Radiochemistry
Radioiodination of serum amyloid protein, 12:23166 (RA;IL)
Solvent Extraction
Preconcentration in static and dynamic extractive separations, 12:23030 (RA;CS)
IODINE CHLORIDES
Reflectivity
Effect of c-axis dispersion on the optical properties of acceptor-type graphite intercalation compounds, 12:22974 (J;US)
IODINE COMPOUNDS
See also IODINE CHLORIDES
Dissociation
Faraday discussion No. 82: Dynamics of molecular photofragmentation: Comment on papers No. 4 and No. 10, 12:23794 (R;US)
IODINE IODIDES
See IODINE
IODINE ISOTOPES
See also IODINE 125
IODINE 129
IODINE 131
Air Filters
Determination of removal efficiency of vent-air system filters of V-1 nuclear power plant, 12:23197 (RA;CS;In Slovak)
ION ACOUSTIC WAVES
Non-dispersive ion waves
Scattering
Anomalous plasma resistivity and ion-acoustic turbulence, 12:24233 (RA;FR)
Solitons
Soliton resonance and related phenomena in plasmas, 12:24224 (RA;FR)
ION BEAMS
Acceleration
Velocity distributions of ion beams in the plasma-sheet boundary layer. Progress report, 12:23779 (R;US)
Beam Bunching
Bunching in time at the ATLAS [Argonne Tandem-Linac Accelerator System] accelerator, 12:23267 (R;US)
Electron Cooling
Electron cooling of heavy ion beams, 12:23269 (R;DE)
Energy Absorption
New version of the energy-deposition code D-DEP-1: better stopping powers. Final report, 12:24050 (R;US)
Microdosimetry
Microdosimetric spectra of heavy ion beams, 12:23612 (BA;US)
ION BLOCKING
See ION CHANNELING
ION CHANNELING
Reviews
Ion beam analysis of irradiated materials, 12:24133 (J;CH)

ION COLLISIONS

ION-ATOM COLLISIONS
ION-MOLECULE COLLISIONS
Research Programs
Electron transfer ionization and excitation in atomic collisions: Progress report, 12:23800 (R;US)
ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING
ION EXCHANGE CHROMATOGRAPHY
Performance Testing
Cerro Negro heavy petroleum - separation and analysis of acid, base, saturate, and aromatic fractions, 12:22198 (RA;US)
ION SCATTERING ANALYSIS
Atom location using recoil ion spectroscopy, 12:23057 (RA;AU)
Scattering of low energy hydrogen ions from single crystal surfaces, 12:23054 (RA;AU)
Some hazards of using Rutherford backscattering and channeling techniques in materials science studies, 12:23063 (RA;AU)
ION SOURCES
Design
Isotopic analysis of nanogram quantities of plutonium by using a SID ionization source, 12:23393 (J;NE)
Milli Amp Beam Currents
Characteristics of a high current ion source operated with lithium, 12:23279 (R;DE)
Performance
Isotopic analysis of nanogram quantities of plutonium by using a SID ionization source, 12:23393 (J;NE)
Time-of-Flight Spectrometers
Possible /sup 252/Cf utilization in mass spectrometry, 12:24112 (RA;CS;In Slovak)
ION-ATOM COLLISIONS
Autoionization
Correlated double electron capture in slow, highly charged ion-atom collisions, 12:23798 (R;US)
Pair Production
Anomalous positron emission in heavy ion-collisions, 12:23803 (R;DE)
Experimental summary, 12:23802 (R;DE)
Study of the positron production in uranium-uranium collisions, 12:23808 (R;DE;In German)
Reviews
Anomalous positron emission in heavy ion-collisions, 12:23803 (R;DE)
Experimental summary, 12:23802 (R;DE)
IONIC REACTIONS
See CHEMICAL REACTIONS
IONS
IONIZATION CALORIMETERS
See SHOWER COUNTERS
IONIZATION CHAMBERS
See also BRAGG GRAY CHAMBERS
Calibration
Tissue-equivalent calorimeter for direct calibration of ionization chambers in neutron beams, 12:23344 (RA;FR;In French)
Comparative Evaluations
Comparison of two ionisation chambers for neutron dosimetry, 12:23318 (RA;FR)
Design
Comparison of two ionisation chambers for neutron dosimetry, 12:23318 (RA;FR)
Sensitivity
Characteristics of high-pressure ionization chambers with several filling gases in neutron and photon fields, 12:23319 (RA;FR)
Determination of dose components in mixed gamma neutron fields by use of high pressure ionization chambers, 12:23320 (RA;FR)
Tissue-Equivalent Materials
Future of A-150 TE plastic, 12:23317 (RA;FR)
IONIZING RADIATIONS

GAMMA RADIATION
X RADIATION
Carcinogenesis
Radiation carcinogenesis, 12:23664 (RA;US)
Meetings
Scientific conference proceedings. Session 4. Ionizing radiation, 12:23154 (R;CS;In Czech)
ION-MOLECULE COLLISIONS
Electron Capture
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)
Excitation
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)
IONOPHORESIS
See ELECTROPHORESIS
IONOSPHERE
Electric Currents
Modeling substorm current sytems using conductivity distributions inferred from DE (Dynamics Explorer) auroral images, 12:23776 (R;US)
Ion-Atom Collisions
Spectral characteristics of interchange turbulence in the ionosphere. Memorandum report, 12:23782 (R;US)
Ion-Molecule Collisions
Spectral characteristics of interchange turbulence in the ionosphere. Memorandum report, 12:23782 (R;US)
Plasma
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)
Plasma Instability
Ionospheric plasma study. Final report, 28 February 1983-28 February 1986, 12:23775 (R;US)
Plasma Sheet
Ionospheric plasma study. Final report, 28 February 1983-28 February 1986, 12:23775 (R;US)
Radiowave Radiation
High-resolution studies of the HF ionospheric modification interaction region, 12:23787 (J;US)
Shock Waves
Collisionless shock waves in space, 12:23746 (RA;FR)
IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS
See also ANIONS
ARGON IONS

Acceleration
Ion acceleration during strong electromagnetic radiation interaction with a plasma, 12:24249 (RA;SU;In Russian)
Recombination
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)
IONS (MOLECULAR)
See MOLECULAR IONS
IOWA
Air Quality
Iowa air quality report, 1985, 12:23437 (R;US)
IRIDIUM ALLOYS
Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)
Formation Heat
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)

IRIDIUM COMPOUNDS
Chemical Preparation
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)
Synthesis and reactions of hydrido(eta^1-allyl)- and hydrido(eta^3-allyl)iridium complexes, 12:23129 (J;US)
Chemical Reactions
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)

IRON
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Determination of concentration of some plant elements in reactions with charged particles, 12:23069 (RA;SU;In Russian)
Auger Electron Spectroscopy
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Chemical Reaction Kinetics
Non-parabolic growth in the sulfidation of iron, 12:22905 (BA;US)
Corrosion
Corrosion of iron in molten carbonates at 650°C, 12:22702 (BA;US)
Non-parabolic growth in the sulfidation of iron, 12:22905 (BA;US)
Electron Diffraction
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Electronic Structure
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Magnetic Properties
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Neutron Reactions
Gamma ray production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb at 90 deg. , 12:23957 (R;XA)
Photoelectron Spectroscopy
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Physical Radiation Effects
Heavy ion irradiation with 200 keV Ni-ions to study the swelling of iron and nickel and the technical alloys, 12:22847 (R;DE;In German)
PIXE Analysis
Analysis by PIXE and PIGME of biomineralized tissues in the chiton Clavarizona hirtosa, 12:23042 (RA;AU)
Shock Waves
Shock-impedance-match experiments at pressures to 2.5 TPa (25 Mbar), 12:22871 (R;US)
Structural Chemical Analysis
Non-parabolic growth in the sulfidation of iron, 12:22905 (BA;US)
Sulfidation
Non-parabolic growth in the sulfidation of iron, 12:22905 (BA;US)
X-Ray Fluorescence Analysis
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)

IRON 56 TARGET
Muon Reactions
Study of nuclear effects using structure functions of heavy nuclei nucleons, 12:23830 (RA;CS;In Czech)

IRON ALLOYS
See also INCONEL 600
IRON BASE ALLOYS
NIMONIC PE16
Amorphous State
Formation of amorphous plutonium alloys or metastable structures in Pu-Fe, Pu-Ta, Pu-Si alloys, 12:22889 (J;CH)
Chemical Reaction Kinetics
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Corrosion Products
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Crack Propagation
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Fracture Properties
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Hydrogen Embrittlement
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Neutron Diffraction
Magnetic structures of HoFe/sub 5/Al/sub 7/. A neutron diffraction study, 12:22836 (RA;IL)
Oxidation
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)
Scaling
Segregation of sulfur to grain boundaries in chromia and alumina scales, 12:22908 (BA;US)

KLYSTRONS
Computerized Simulation
Computational needs for modelling accelerator components, 12:23284 (BA;NL)
Windows
Stabilized chromium oxide film, 12:23246 (P;US)

KNK-2 REACTOR
Leopoldshafen, Karlsruhe, Federal Republic of Germany
Fuel Element Failure
Consulting core surveillance system COCOSS I at KNK II, 12:22471 (R;DE)
KNOCK-ON ELECTRONS
See ELECTRONS
KOREA (SOUTH)
See REPUBLIC OF KOREA
KOZLODUY-1 REACTOR
Kozloduj, Bulgaria
Radiation Protection
Dosimetric monitoring and specific features of radiation factors at Kozloduj NPP over 8 years operation, 12:22504 (RA;XM;In Russian)
KOZLODUY-2 REACTOR
Kozloduj, Bulgaria
Radiation Protection
Dosimetric monitoring and specific features of radiation factors at Kozloduj NPP over 8 years operation, 12:22504 (RA;XM;In Russian)
KRYPTON
Electron-Atom Collisions
Elastic scattering of electrons from inert gases: 5. Argon and krypton in the vicinity of Ramsauer-Townsend minima and on the choice of pseudo-states, 12:23804 (R;XA)
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
KRYPTON 85
Air Filters
Decontamination factor determination for adsorption filters in nuclear power plants, 12:23198 (RA;CS;In Slovak)
Radiation Monitoring
Discontinuous method of /sup 3/H, /sup 14/C, /sup 85/Kr and /sup 133/Xe activity measurement in nuclear power plant stack, 12:23360 (RA;CS;In Slovak)
Radioactive Waste Processing
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Radioactive Waste Storage
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Solidification
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
KRYPTON FLUORIDE LASERS
Simple laser-driven, metal photocathodes as cold, high-current electron sources. Master's thesis, 12:23212 (R;US)
KRYPTON FLUORIDES
Chemical Reactions
Low temperature preparation of actinide hexafluorides by O_2F_2 and KrF_2, 12:23181 (J;CH)
KRYPTON IONS
Collisions
Implications of heavy-ion-induced satellite x-ray emission III, 12:24130 (J;NL)
KWL REACTOR
See LINGEN REACTOR

L

LABELLED COMPOUNDS
Compounds labelled with either stable or radioactive isotopes.
See also RADIOPHARMACEUTICALS
Chemical Preparation
Nucleophilic aromatic substitution of activated cationic groups by ^{18}F-labeled fluoride. A useful route to no-carrier-added (NCA) ^{18}F-labeled aryl fluorides, 12:23183 (J;CH)
LACTOBACILLUS
Radurization
Systematics and characteristics of radiation resistant Lactobacilli from radurised meat, 12:23623 (RA;ZA)
LAGRANGE FIELD EQUATIONS

LAPPS
Body Burden
Measurements of cesium-137 in Norwegian Lapps from the Kautokeino area during the Spring 1986. Measurements of cesium-137 in reindeer meat from the Kautokeino reindeer slaughterhouse, 12:23669 (R;NO;In Norwegian)
Radiation Monitoring
Measurements of cesium-137 in Norwegian Lapps from the Kautokeino area during the Spring 1986. Measurements of

cesium-137 in reindeer meat from the Kautokeino reindeer slaughterhouse, 12:23669 (R;NO;In Norwegian)

LASER RADIATION

Biological Radiation Effects

Functional assessment of high-level laser irradiation. Annual progress report, 1 August 1983-31 December 1984, 12:23714 (R;US)

Interactions

Interaction of an adsorbed atom with a laser. Technical report, 12:23790 (R;US)

LASER TARGETS

Fabrication

Fabrication of high-gain inertial fusion targets using gas jet cooling and intensity-graded laser illumination, 12:24302 (J;US)

Fuel Injection Systems

Fabrication of high-gain inertial fusion targets using gas jet cooling and intensity-graded laser illumination, 12:24302 (J;US)

Temperature Distribution

Study on the dynamics of cryolayer behaviour in targets with the presence of temperature gradient, 12:24289 (RA;SU;In Russian)

LASER-PRODUCED PLASMA

Theoretical study of electrical breakdown in nitrogen induced by laser radiation at 1.06 μm, 12:24244 (R;XA)

Atomic Beams

High intensity 5 eV CW laser sustained O-atom exposure facility for material degradation studies, 12:23815 (J;US)

Charged-Particle Transport Theory

Thermal electrons transport in the presence of strong temperature gradients, 12:24235 (RA;FR)

Emission

Harmonic emission from the quarter critical density surface of laser-produced plasmas, 12:24225 (RA;FR)

Heat Transfer

Thermal electrons transport in the presence of strong temperature gradients, 12:24235 (RA;FR)

Nonlinear Optics

Double stimulated scattering and the development of the theory of parametric instabilities in plasmas, 12:24232 (RA;FR)

Parametric Instabilities

Double stimulated scattering and the development of the theory of parametric instabilities in plasmas, 12:24232 (RA;FR)

Shock Waves

Spallation and dynamic fracture as an effect of laser induced shock waves, 12:24242 (RA;IL)

LASERS

Light Amplification by Stimulated Emission of Radiation.

See also FREE ELECTRON LASERS
SEMICONDUCTOR LASERS
SOLID STATE LASERS
X-RAY LASERS

Maxwell Equations

Self-consistent solution for the nonlinear dynamics of dense electron beams in the autoresonance laser accelerator, 12:24240 (RA;IL)

LASL

Research Programs

Long range plan for explosives technology group (M-1), 12:23394 (R;US)

LATEX

Shear

Neutron scattering from charged polymer lattices, 12:22939 (R;US)

Structure Factors

Neutron scattering from charged polymer lattices, 12:22939 (R;US)

LATTICE FIELD THEORY

Hamiltonians

Scaling of the 0sup++ glueball mass in SU(N) Hamiltonian lattice calculations, 12:23931 (J;US)

Scaling Laws

Scaling of the 0sup++ glueball mass in SU(N) Hamiltonian lattice calculations, 12:23931 (J;US)

Spin Glass State

Random dynamics, 12:23923 (R;DK)

LATTICES (REACTOR)

See REACTOR LATTICES

LAUSANNE TOKAMAK

See TCA TOKAMAK

LAWRENCE BERKELEY LABORATORY

Semiconductor Materials

Semiconductor research capabilities at the Lawrence Berkeley Laboratory, 12:22953 (R;US)

LAWRENCE LIVERMORE LABORATORY

Land Pollution

Site investigation: Hydrocarbon leak near Building 403, Lawrence Livermore National Laboratory, 12:23476 (R;US)

Site Surveys

Technical report of biota, FEL Site 2, Lawrence Livermore National Laboratory: Final report, 12:23494 (R;US)

Waste Management

Waste minimization study for the Lawrence Livermore National Laboratory: Final report, 12:23495 (R;US)

LEACHATES

Control

SOILINER Version 1 (for microcomputers). Software, 12:23475 (R;US)

LEAD

Absorption Spectroscopy

Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)

Casting

Thermal conductivity effects and process variables study: Final report covering the period 15 July to 15 October 1986, 12:22868 (R;US)

Hadronic Atoms

Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)

Positronium

Positronium emission from lead, 12:22878 (J;US)

LEAD 206 TARGET

Sodium 23 Reactions

Fusion with polarized heavy ions. Particle evaporation and fission at energies at and below the barrier, 12:23959 (R;DE;In German)

LEAD 208 REACTIONS

Carbon 12 Reactions

Azimuthal correlations in central collisions of relativistic nuclei, 12:23936 (RA;CS;In Slovak)

LEAD 208 TARGET

Argon 40 Reactions

Real and imaginary part of the potential between two nuclei and the realistic nucleon-nucleon interaction, 12:23996 (R;DE;In German)

Helium 3 Reactions

33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)

Proton Reactions

Analysis of the neutron energy spectra from the sup(208)Pb (p,n) sup(208)Bi reaction at Esub(p)=200 MeV, 12:24027 (R;SU)

LEAD ALLOYS

Fusion Heat

Preparation and characterization of the Li(17)Pb(83) eutectic alloy and the LiPb intermetallic compound, 12:22850 (RA;DE)

Phase Diagrams

Preparation and characterization of the Li(17)Pb(83) eutectic alloy and the LiPb intermetallic compound, 12:22850 (RA;DE)

Physical Properties

Thermophysical properties in the system Li-Pb, 12:22849 (R;DE)

Thermophysical properties of the Li(17)Pb(83) eutectic alloy, 12:22851 (RA;DE)

Thermodynamic Properties

Estimation of thermophysical properties in the system Li-Pb, 12:22852 (RA;DE)

Thermophysical properties in the system Li-Pb, 12:22849 (R;DE)

LEAD COMPLEXES
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

LEAD OXIDES
Biological Availability
Anaerobic bacterial dissolution of lead oxide, 12:22161 (J;DE)
Dissolution
Anaerobic bacterial dissolution of lead oxide, 12:22161 (J;DE)

LEAD-ACID BATTERIES
Charge State
Effect of depth-of-discharge on lead-acid battery overcharge requirements, 12:22643 (R;US)
Performance
Capacity and peak power degradation of lead-acid battery under simulated electric vehicle operations, 12:22642 (R;US)

LEAVES
Biodegradation
Effect of excluding shredders on leaf litter decomposition in two streams, 12:23524 (J;US)
Biological Stress
Effects of NaCl on proline synthesis and utilization in excised barley leaves, 12:23575 (J;US)
Steady state proline levels in salt-shocked barley leaves, 12:23574 (J;US)

LEED
See ELECTRON DIFFRACTION

LEIBSTADT REACTOR
Containment Systems
Containment integrity is a major part of KKL-safety systems PRA, 12:22565 (RA;US)
Reactor Core Disruption
Containment integrity is a major part of KKL-safety systems PRA, 12:22565 (RA;US)

Retrofitting
Luminaire retrofit performance: Commercial building lighting systems: Final report, 12:22765 (R;US)

LIGNITE
Ash Content
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Biodegradation
Biodegradation and bioconversion of coals by fungi: Technical report No. 6 for the period December 1, 1986-February 28, 1987, 12:22133 (R;US)
Degradation of lignite coal by Polyporus versicolor: Initial characterization of products, 12:22111 (RA;US)
Microbial coal liquefaction, 12:22112 (RA;US)
Microbial screening for lignite degradation, 12:22140 (RA;US)
Microbial processing of fuels, 12:23613 (RA;US)
Calorific Value
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Chemical Composition
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)
Cleaning
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)
Density
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Desulfurization
Use of basic nitrogen to chemically clean coal: Quarterly report No. 2 for the period December 16, 1986 to March 15, 1987, 12:22135 (R;US)
Grinding
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)
Hydrogenation
Enhanced coal liquefaction by low-severity catalytic reactions: Technical progress report for the period December 1986 to February 1987, 12:22136 (R;US)
Moisture
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Molecular Structure
Chemical structure of low-rank coals, 12:22144 (RA;US)
Oxidation
Ruthenium tetroxide oxidation of low-rank coals, 12:22142 (RA;US)
Particle Size
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Porosity
Ultrafine grinding of low-rank coal: Final report, 12:22085 (R;US)
Structural Chemical Analysis
Chemical structure of low-rank coals, 12:22144 (RA;US)
Ruthenium tetroxide oxidation of low-rank coals, 12:22142 (RA;US)

Transport
Transportation of lignite to the North Island. Technical and economic evaluation of options. Summary report, 12:22166 (R;US)
Weathering
Biodegradation and bioconversion of coals by fungi: Technical report No. 6 for the period December 1, 1986-February 28, 1987, 12:22133 (R;US)

LIMESTONE
Decomposition
Effects of atmospheric exposure on roughening, recession, and chemical alteration of marble and limestone sample surfaces in the eastern United States, 12:23479 (BA;US)

LINE BROADENING
Plasmons
Effect of plasma oscillations on the radiation profile of the immersed ions in plasma, 12:24241 (RA;IL)

LINEAR Z PINCH DEVICES
Kink Instability
Effects of pressure anisotropy on the M=1 small wavelenght modes in Z-pinches, 12:24257 (R;SE)

LINGEN REACTOR
Lingen Nuclear Power Plant. Annual report 1985, 12:22443 (R;DE;In German)

LIPIDS

LOS ALAMOS SCIENTIFIC LABORATORY
See LASL

LOSS OF COOLANT
Computer Calculations
Determination of appendix K conservatisms for Westinghouse pressurized water reactors using TRAC-PD2/MOD1, 12:22606 (J;US)
Heat Transfer
Results of Semiscale Mod-2C small-break loss-of-coolant accident without HPI [high-pressure injection] (S-NH) experiment series, 12:22599 (R;US)
Hydraulics
Results of Semiscale Mod-2C small-break loss-of-coolant accident without HPI [high-pressure injection] (S-NH) experiment series, 12:22599 (R;US)
T Codes
Determination of appendix K conservatisms for Westinghouse pressurized water reactors using TRAC-PD2/MOD1, 12:22606 (J;US)
LOUISIANA
Ground Water
Potentiometric-level monitoring program, Mississippi and Louisiana: Annual status report for fiscal year 1985 (Richton and Cypress Creek Domes, M5 and Vacherie Dome, LA), 12:22253 (R;US)
LOVIISA-1 REACTOR
Loviisa, Finland
Spent Fuel Elements
Spent fuel measurements at Loviisa Nuclear Power Station May 1982, 12:22459 (R;FI)
LOVIISA-2 REACTOR
Loviisa, Finland
Spent Fuel Elements
Spent fuel measurements at Loviisa Nuclear Power Station May 1982, 12:22459 (R;FI)
LOW DOSE IRRADIATION
Biological Radiation Effects
Radiation and cancer incidence - some reflections on the Swedish cancer panorama, 12:22554 (RA;SE;In Swedish)
LOW ENERGY ELECTRON DIFFRACTION
See ELECTRON DIFFRACTION
LOWER HYBRID HEATING
Stability
Suppression of sawtooth oscillations by Lower Hybrid Current Drive in the Petula-B tokamak, 12:24237 (RA;FR)
LOWER HYBRID RESONANCE HEATING
See LOWER HYBRID HEATING
LOW-LEVEL RADIOACTIVE WASTES
Combustion
Occurrence of chlorinated aromatic compounds in filter deposits of an incinerator plant for radioactive waste. Pt. 1. Analysis of chlorinated polycyclic aromatic compounds, 12:23075 (R;AT;In German)
Ground Disposal
Onsite disposal of radioactive waste: Methodology for the radiological assessment of disposal by subsurface burial, 12:22300 (R;US)
Subsurface disposal of liquid low-level radioactive wastes at Oak Ridge, Tennessee, 12:22317 (BA;US)
Pumping
Magnetic shaft seals prevent hazardous leakage from wastewater agitators, 12:22322 (J;US)
Radioactive Waste Disposal
Some considerations in the evaluation of concrete as a structural material for alternative LLW [low-level radioactive waste] disposal technologies, 12:22256 (R;US)
Subsurface disposal of liquid low-level radioactive wastes at Oak Ridge, Tennessee, 12:22317 (BA;US)
Radioactive Waste Facilities
SWSA [Solid Waste Storage Area] 6 tumulus disposal demonstration, 12:22258 (R;US)
Radioactive Waste Processing
Evaluation of potential mixed wastes containing lead, chromium, or used oil, 12:22257 (R;US)
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Radioactive Waste Storage
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Solidification
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Stabilization
Development of equipment for stabilization and isolation of low-level liquid waste disposal cribs: A descriptive summary, 12:22310 (R;US)
Underground Disposal
Development of equipment for stabilization and isolation of low-level liquid waste disposal cribs: A descriptive summary, 12:22310 (R;US)
Waste Disposal Acts
Proceedings of the US Nuclear Regulatory Commission meeting with states on the Low-Level Radioactive Waste Policy Amendments Act (LLRWPAA) of 1985, 12:22301 (R;US)
LP-GAS
See LIQUEFIED PETROLEUM GASES
LUNAR MATERIALS
Isotope Production
Monte Carlo calculation of cosmogenic nuclide production, 12:23758 (RA;CS;In Slovak)
LUNGS
Carcinomas
Monoclonal antibodies for diagnosis and therapy, 12:23551 (RA;US)
Cell Proliferation
Cell kinetics and acute lung injury, 12:23708 (RA;US)
Injuries
Cell kinetics and acute lung injury, 12:23708 (RA;US)
Neoplasms
Inhibition of lung tumor development by hyperoxia and by oxidants, 12:23707 (RA;US)
LURGI PROCESS
Economic Analysis
Coal gasification via the Lurgi process: Topical report: Volume 2, Production of IFG [industrial fuel gas], 12:22124 (R;US)
LUTETIUM 175 TARGET
Carbon 12 Reactions
Study of the fission dynamics of hot atomic nuclei by means of the neutron emission, 12:23968 (R;DE;In German)
LWBR TYPE REACTORS
Fuel Rods
LWBR development program: Flow-induced vibrational wear behavior of zircaloy clad simulated fuel rods in a grid support system, 12:22473 (R;US)
Reactor Cores
Measured proof of breeding of the light water breeder reactor, 12:22462 (J;US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYMPHOBLASTOMAS
See LYMPHOMAS
LYMPHOGRANULOMAS
See LYMPHOMAS
LYMPHOMAS
Low Dose Irradiation
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
Neutron Therapy
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
Oxygen Enhancement Ratio
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
RBE
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
Survival Time
OER by survival time for Cf-252, low dose rate Cs-137 and acute Co-60 for LSA lymphoma, 12:23602 (J;US)
LYSOZYME
Code number 3.2.1.17.

Iodination
Rapid and mild radioiodination of sensitive proteins, 12:23165 (RA;IL)
Labelling
Rapid and mild radioiodination of sensitive proteins, 12:23165 (RA;IL)

M

M CODES
Model documentation for the Mini-Macroeconomic Model: MINMAC, 12:22656 (R;US)
MA 754

MACERALS
Mechanical Properties
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)
Physical Properties
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)
Separation Processes
Coal pretreatment for two-stage liquefaction, 12:22120 (RA;US)
MACHINE TOOLS
See also GRINDING MACHINES
Automation
Chip breaking system for automated machine tool, 12:23209 (P;US)
MAGNESIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
MAGNESIUM 24 TARGET
Proton Reactions
Nucleon optical potential: an extended three-body problem or a restricted infinite-body problem, 12:23987 (R;US)
MAGNESIUM 26 TARGET
Neutron Reactions
Effect of nucleus deformability on the diffraction scattering of intermediate-energy neutrons, 12:24019 (RA;SU;In Russian)
MAGNESIUM COMPOUNDS
See also MAGNESIUM OXIDES
NMR Spectra
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
Nuclear Magnetic Resonance
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
MAGNESIUM OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
Grain Boundaries
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
Sorptive Properties
Fundamental research on novel process alternatives for coal gasification: Final report, 12:22125 (R;US)
MAGNETIC FIELDS
See also GEOMAGNETIC FIELD
INTERPLANETARY MAGNETIC FIELDS
Biological Effects
Biological effects of extremely-low-frequency magnetic fields, 12:23716 (R;US)
Interaction mechanisms, biological effects and biomedical applications of static and extremely-low-frequency magnetic fields, 12:23717 (R;US)
MAGNETIC LENS SPECTROMETERS
Beam Optics
Investigation of the ion-optical properties of the magnetic spectrometer LEPS, 12:23364 (R;DE;In German)
MAGNETIC MATERIALS

FERROMAGNETIC MATERIALS
Hall Effect
Charged vortex excitations in quantum Hall systems, 12:24125 (J;US)
Phase Diagrams
Phase diagram of the ground state of spin-1 quantum chains, 12:24127 (J;US)
MAGNETIC MIRRORS
Including systems with minimum-B configuration.
See also TANDEM MIRRORS
Design
Plasma-materials interactions test facility, 12:24261 (J;US)
Operation
Plasma-materials interactions test facility, 12:24261 (J;US)
MAGNETIC MONOPOLES
Gauge Invariance
Monopoles in topologically massive gauge theories, 12:23929 (J;US)
String Models
Monopoles in topologically massive gauge theories, 12:23929 (J;US)
MAGNETIC PROBES
Design
Simple system for mapping magnetic field errors in tori, 12:24266 (J;US)
Performance Testing
Simple system for mapping magnetic field errors in tori, 12:24266 (J;US)
MAGNETIC RECONNECTION
Plasma Simulation
Nonlinear driven reconnection, 12:24236 (RA;FR)
MAGNETIC REFRIGERATORS
Design
Magnetic refrigeration apparatus with heat pipes, 12:23208 (P;US)
Heat Pipes
Magnetic refrigeration apparatus with heat pipes, 12:23208 (P;US)
MAGNETIC SEPARATORS
Design
Apparatus for magnetic separation of paramagnetic and diamagnetic material, 12:22087 (P;US)
MAGNETIC STORMS
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
Electric Currents
Modeling substorm current sytems using conductivity distributions inferred from DE (Dynamics Explorer) auroral images, 12:23776 (R;US)
Sudden Commencements
Global auroral responses to magnetospheric compressions by shocks in the solar wind: two case studies, 12:23777 (R;US)
MAGNETIC SURFACES
Plasma Disruption
Nature of disruptions, 12:24199 (RA;FR)
MAGNETOHYDRODYNAMICS
Equations
Resistive MHD-equations for Tokamaks with arbitrary β and cross-section, 12:24202 (RA;FR)
Toroidal Configuration
Resistive MHD-equations for Tokamaks with arbitrary β and cross-section, 12:24202 (RA;FR)

MAGNETOSPHERE
See EARTH MAGNETOSPHERE
MAGNETOTAIL
Magnetic Reconnection
Nonlinear driven reconnection, 12:24236 (RA;FR)
Plasma Sheet
Velocity distributions of ion beams in the plasma-sheet boundary layer. Progress report, 12:23779 (R;US)
MAIN SEQUENCE STARS
See also SUN
Infrared Spectra
Far-infrared investigation of the Taurus star-forming region using the IRAS database, 12:23763 (RA;US)
MALAYA

MALAYSIA
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Nuclear Power
Approach to studying the nuclear power option in Malaysia, 12:22482 (R;MY)
MALES
Sterility
Cytological studies of sterility in male progeny of mutagen-exposed male parents, 12:23663 (RA;US)
RNA synthesis in spermatocytes of sterile X-autosome translocation males, 12:23568 (RA;US)
MALIGNANCIES
See NEOPLASMS
MAMMARY GLANDS
Carcinomas
Monoclonal antibodies for diagnosis and therapy, 12:23551 (RA;US)
MAN
All of mankind, of any age or of either sex.
Radiation Injuries
Severity levels and symptoms complexes for acute radiation sickness -- description and quantification. Technical report, 6 January 1984-31 March 1985, 12:23626 (R;US)
MANGANESE
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Separation Processes
Membrane extraction for preconcentration of radionuclides, 12:23026 (RA;CS)
X-Ray Fluorescence Analysis
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)
MANGANESE STEELS
Cryogenics
Development of a high-strength high-manganese stainless steel for cryogenic use, 12:23201 (R;JP)
MANGOES
Enzyme Activity
Biochemical changes in stress response of γ-irradiated ripening mango fruit, 12:23624 (RA;ZA)
MANIPULATORS
Design
Traction drive seven degrees-of-freedom telerobot arm: A concept for manipulation in space, 12:23193 (R;US)
Technology Assessment
Manipulator technology: The critical element of useful autonomous "working" machines, 12:23192 (R;US)
MANUFACTURED BUILDINGS

MARBLE
Decomposition
Effects of atmospheric exposure on roughening, recession, and chemical alteration of marble and limestone sample surfaces in the eastern United States, 12:23479 (BA;US)
Geologic Fractures
Experimental assessment of the sealing effectiveness of rock fracture grouting, 12:22302 (R;US)
MARINE VEHICLE ACCIDENTS
See ACCIDENTS
MARSHES
Pollution
Instrumental neutron activation analysis of site-dependent uptake and distribution of trace elements in the saltmarsh plant Aster tripolium from marsh fields in the Schelde estuary, Netherlands, 12:23073 (R;DE;In German)
MASS FORMULAE
Progress in our notion of mass, 12:23893 (R;AT)
MASS SPECTROMETERS
Calibration
Calibration of mass spectrometers for quantitative gas mixture analysis, 12:23389 (J;US)
Design
Ion signal calibration in the imaging atom-probe with an external, time-gated image intensifier, 12:23390 (J;US)
Image Intensifiers
Ion signal calibration in the imaging atom-probe with an external, time-gated image intensifier, 12:23390 (J;US)
Ion Sources
Isotopic analysis of nanogram quantities of plutonium by using a SID ionization source, 12:23393 (J;NE)
Performance
Ion signal calibration in the imaging atom-probe with an external, time-gated image intensifier, 12:23390 (J;US)
MASS SPECTROSCOPY
Calibration Standards
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
Uses
Mass spectrometry applications at UJV, 12:23007 (RA;CS;In Czech)
MASS TRANSIT SYSTEMS
Cost Benefit Analysis
Cost effectiveness of park-and-ride lots in the Puget Sound region area. Final report, 12:22776 (R;US)
Maintenance Facilities
Manual for planning, designing, and operating transitway facilities in Texas. Research report, April 1984-August 1985, 12:22780 (R;US)
Management
Small transit-system management handbook. Final report, 12:22786 (R;US)
Marketing
Transit marketing in Pennsylvania: a handbook of effective transit-marketing aids (revised edition), 12:22781 (R;US)
West virginia transit-marketing manual: get on the Bus and Ride, 12:22779 (R;US)

Performance
Total-factor productivity analysis of public transit, 12:22783 (R;US)
Productivity
Total-factor productivity analysis of public transit, 12:22783 (R;US)
Socio-Economic Factors
Economic factors in the provision of transportation services, 12:22782 (R;US)

Nuclear analysis methods in monitoring occupational health, 12:23050 (RA;AU)
Air Pollution Control
Trace metal, acid gas, and dioxin emissions data collected at refuse energy recovery facilities in the US, Japan, and Europe: testing methods, results, and emission factors, 12:22414 (RA;US)
Electron Beam Welding
Electron beam welding unit data acquisition using personal computer, 12:22896 (BA;US)
Grain Boundaries
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
Manufacturing
Energy intensity of metals manufacturing and effects of changing composition of production, 12:22655 (R;US)
Phase Transformations
Effect of interplane coupling in quasi-two-dimensional systems, 12:24137 (J;US)
Physical Radiation Effects
Role of small γ-quantum doses in defect structure rearrangement in metals and alloys, 12:22842 (RA;SU;In Russian)
PIXE Analysis
Nuclear analysis methods in monitoring occupational health, 12:23050 (RA;AU)
Polarizability
Multipolar response of small metallic spheres: Nonlocal theory, 12:24119 (J;US)
Water Pollution
Case studies and model testing of the Metals Exposure Analysis Modeling System (MEXAMS). Report for January-September 1985, 12:23522 (R;US)
METAMORPHIC ROCKS
See also MARBLE
Origin
Nd, O and Sr isotopic constraints on the origin of Precambrian rocks, southern Black Hills, South Dakota, 12:23739 (J;US)
METEOROLOGY
Environmental Transport
Numerical models for computation of pollutant-dispersion in the atmosphere, 12:23430 (R;DE;In German)
METHANE
Biosynthesis
Feasibility of mariculture of the brown seaweed, Sargassum muticum (Phaeophyta): Growth and culture conditions, alginic acid content and conversion to methane, 12:22373 (BA;DE)
Stability of carrageenan during anaerobic digestion, 12:22374 (BA;DE)
Ionization
Calculated approach to the ionization of low-Z molecules by heavy charged particles, 12:24054 (RA;FR)
Oxidation
Partial oxidation of methane with nitrous oxide over V_2O_5-SiO_2 catalyst, 12:22357 (J;US)
Phase Studies
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
Radiolysis
Radiation formation of methyl iodide, 12:23157 (RA;CS;In Czech)
Recovery
Economic evaluation of horizontal borehole drilling for methane drainage from coalbeds. Information Circular/1986, 12:22210 (R;US)
Stereochemistry
Direct determination of the stereochemical structure of CH_4^+, 12:23816 (J;US)
METHANE HYDRATE DEPOSITS
See NATURAL GAS HYDRATE DEPOSITS
METHANE HYDRATES
See GAS HYDRATES
METHANOGENIC BACTERIA
See also CLOSTRIDIUM ACETOBUTYLICUM
DNA-Cloning
[Genetics of the methanogenic bacterium Methanococcus voltae with attention to genetic control mechanisms]: Progress report, 12:23536 (R;US)
Molecular Biology
[Genetics of the methanogenic bacterium Methanococcus voltae with attention to genetic control mechanisms]: Progress report, 12:23536 (R;US)
METHANOL
Surface Tension
Characterization of coal surfaces: Final report, 12:22146 (R;US)
Synthesis
EPRI [Electric Power Research Institute] coal liquefaction program, 12:22117 (RA;US)
METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Performance
Rationale for converting the US transportation system to methanol fuel, 12:22812 (R;US)
METHYL ALCOHOL
See METHANOL
METHYL NITROSOUREA
Genetic Effects
Genetic analysis of multiple classes of Steeloid mutations: preliminaries for developmental analysis of pleiotropic effects, 12:23661 (RA;US)
METHYL PHENOLS
See CRESOLS
METHYL VIOLOGEN
See BIPYRIDINES
METHYLBENZENE
See TOLUENE
3-METHYLCHOLANTHRENE
Carcinogenesis
Inhibition of lung tumor development by hyperoxia and by oxidants, 12:23707 (RA;US)
METHYL-FUEL
See METHANOL
METHYLNAPHTHALENES
Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)
2-METHYLPROPANE
Chemical Preparation
Thorium oxide: new catalyst for methanol, isobutanol, and light hydrocarbon production from carbon monoxide and hydrogen, 12:22358 (J;NL)
2-METHYLPROPANOL
Chemical Preparation
Thorium oxide: new catalyst for methanol, isobutanol, and light hydrocarbon production from carbon monoxide and hydrogen, 12:22358 (J;NL)
METRONIDAZOLE
Therapeutic Uses
Metronidazole in the treatment of cervical cancer using Cf-252 neutron brachytherapy, 12:23600 (J;US)
MEXICO
Nuclear Facilities
Memoir 1985. Instituto Nacional de Investigaciones Nucleares, 12:24321 (R;MX;In Spanish)
MICE
Brain
Acute CNS syndrome from $^{10}B(n,\alpha)^7Li$ irradiation of mouse brain, 12:23609 (J;US)
Low Dose Irradiation
Comparative biological effects of low dose, low dose-rate exposures to fission neutrons from the JANUS reactor or to Co-60 gamma rays, 12:23676 (J;US)
Proton Microprobe Analysis
Elemental microanalysis of mouse ileum tissue, 12:23040 (RA;AU)

MICHIGAN
Mass Transit Systems
Small transit-system management handbook. Final report, 12:22786 (R;US)
MICROBIAL ENHANCED OIL RECOVERY
See MICROBIAL EOR
MICROBIAL EOR
Information Needs
MEOR [microbial enhanced oil recovery] technical status and assessment of needs, 1986, 12:22185 (R;US)
Technology Assessment
MEOR [microbial enhanced oil recovery] technical status and assessment of needs, 1986, 12:22185 (R;US)
MICROCOSMS
Evaluation
Artificial streams for ecosystem toxicity studies: Final report, 12:23517 (R;US)
MICRODOSIMETRY
Microdosimetric spectra of heavy ion beams, 12:23612 (BA;US)
Digital Systems
Digital approach to neutron dosimetry and microdosimetry, 12:23316 (RA;FR)
Ionization Chambers
Digital approach to neutron dosimetry and microdosimetry, 12:23316 (RA;FR)
Neutron Transport
Influence of neutron transport phenomena on kerma, absorbed dose and energy deposition spectra, 12:24076 (RA;FR)
Proportional Counters
Dosimetric studies with non-hydrogeneous proportional counters in well defined high energy neutron fields, 12:23292 (RA;FR)
Microdosimetric experiments at a light and heavy water moderated Cf-fission neutron sources, 12:23296 (RA;FR)
Portable microdosimetry system, 12:23293 (RA;FR)
Practical implementation of microdosimetric counters in radiation protection, 12:23291 (RA;FR)
MICROSPHERES
Clearance
Mucociliary clearance and particle retention in the maxillary and ethmoid turbinate regions of beagle dogs, 12:23680 (J;US)
Retention
Mucociliary clearance and particle retention in the maxillary and ethmoid turbinate regions of beagle dogs, 12:23680 (J;US)
MICROWAVE AMPLIFIERS
ECR Heating
Gyrotrons and plasma investigations, 12:24226 (RA;FR)
Plasma Diagnostics
Gyrotrons and plasma investigations, 12:24226 (RA;FR)
Power
High average power and high peak power gyrotrons: present capabilities and future prospects, 12:24285 (RA;FR)
MICROWAVE EQUIPMENT
See also MICROWAVE AMPLIFIERS
ECR Heating
Analysis of multislot directional coupler, 12:24290 (R;JP)
MICROWAVE POWER TRANSMISSION
Wave Propagation
Nonlinear coupling processes of high-power microwaves into enclosures, 12:23190 (R;US)
MID-ATLANTIC REGION
See FEDERAL REGION II
MIDDLE DISTILLATES
See PETROLEUM DISTILLATES
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY EQUIPMENT
Energy Storage
Environmental control packages using below ambient-temperature thermal storage. Final report, 19 August 1985-28 February 1986 on Phase 1, 12:22614 (R;US)
MILITARY FACILITIES
Air Pollution
Diesel emission survey at Dover AFB, Delaware. Final report, 7-10 January 1986, 12:22808 (R;US)
Heat Distribution Systems
Corrosion of aluminum jackets on aboveground heat-distribution systems. Final technical report, 12:22820 (R;US)
MILITARY PERSONNEL
Radiation Doses
Neutron exposure for DOD (Department of Defense) nuclear test personnel. Technical report, 15 June-15 December 1984, 12:23398 (R;US)
Supply and Demand
Preliminary development of a nuclear propulsion officer enlistment supply model. Master's thesis, 12:22674 (R;US)
Thermal Comfort
Environmental control packages using below ambient-temperature thermal storage. Final report, 19 August 1985-28 February 1986 on Phase 1, 12:22614 (R;US)
MILK
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERALS
See also GARNETS
OXIDE MINERALS
Production
Illinois mineral industry in 1984 and review of preliminary mineral production data for 1985. Illinois mineral notes, 12:22671 (R;US)
Removal
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)
MINIMARS REACTOR
Design
MINIMARS conceptual design: Final report, 12:24301 (R;US)
MINING ENGINEERING
Engineers
The labor market for mining engineers: Recent experience and outlook for the future, 12:24307 (R;US)
MIRRORS
Computer-Aided Manufacturing
Fabrication of an 8:1 ellipsoidal mirror for a synchrotron x-ray microprobe, 12:22983 (R;US)
Design
Fabrication of an 8:1 ellipsoidal mirror for a synchrotron x-ray microprobe, 12:22983 (R;US)
MIRRORS (MAGNETIC)
See MAGNETIC MIRRORS
MISCIBLE FLOODING
See MISCIBLE-PHASE DISPLACEMENT
MISCIBLE-PHASE DISPLACEMENT
See also CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Dispersivity as an oil reservoir rock characteristic: Annual report for the period October 1, 1985-September 30, 1986, 12:22184 (R;US)
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
MISGURNUS
See FISHES
MISSISSIPPI
Ground Water
Potentiometric-level monitoring program, Mississippi and Louisiana: Annual status report for fiscal year 1985 (Richton and Cypress Creek Domes, M5 and Vacherie Dome, LA), 12:22253 (R;US)
Radioactive Waste Facilities
Technical basis for high-level waste repository land control requirements for Palo Duro Basin, Paradox Basin, and Richton Dome, 12:22254 (R;US)
MITOCHONDRIA
Osmosis
Chemiosmotic model for plant mitochondria, 12:23556 (J;US)
MNU
See METHYL NITROSOUREA

MOBILE POLLUTANT SOURCES
Used for general articles when sources are not named. See also specific mobile sources e.g., AUTOMOBILES.
Runoff
National data base of nonurban-nonpoint-source discharges and their effect on the nation's water quality. Final report, 12:23521 (R;US)
MODELS (COSMOLOGICAL)
See COSMOLOGICAL MODELS
MODELS (FLOW)
See FLOW MODELS
MODELS (MATHEMATICAL)
See MATHEMATICAL MODELS
MODELS (NUCLEAR)

MODELS (PARTICLE)
See PARTICLE MODELS
MODELS (PLASMA)
See PLASMA SIMULATION
MODELS (STRUCTURAL)
See STRUCTURAL MODELS
MOISTURE GAGES
Neutron and gamma-ray transmission technique for the on-line determination of moisture in coal and coke, 12:23056 (RA;AU)
MOLDS
See FUNGI
MOLECULAR FLUORESCENCE SPECTROSCOPY
See FLUORESCENCE SPECTROSCOPY
MOLECULAR IONS
Coordinate the above descriptor with a descriptor for the specific ion.
Recombination
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)
Stereochemistry
Direct determination of the stereochemical structure of CH_4^+, 12:23816 (J;US)
MOLECULAR ORBITAL MODEL
See MOLECULES
MOLECULES
See also POLYATOMIC MOLECULES
Dissociation
Dynamics of cluster dissociation following multiphoton ionization, 12:23788 (R;US)
Multi-Photon Processes
Dynamics of cluster dissociation following multiphoton ionization, 12:23788 (R;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Anodes
Molten carbonate fuel cell reduction of nickel deposits, 12:22699 (P;US)
Cathodes
Cathode for molten carbonate fuel cell, 12:22701 (P;US)
Molten carbonate fuel cell reduction of nickel deposits, 12:22699 (P;US)
Corrosion
Corrosion of iron in molten carbonates at 650°C, 12:22702 (BA;US)
Electrolytes
Device for equalizing molten electrolyte content in a fuel cell stack, 12:22700 (P;US)
Fabrication
Development of molten carbonate fuel cell at IHI (Ishikawajima-Harima Heavy Industries), 12:22698 (R;JP)
Materials
Development of molten carbonate fuel cell at IHI (Ishikawajima-Harima Heavy Industries), 12:22698 (R;JP)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Research Programs
Future directions in molten salt research as it relates to energy storage, 12:22640 (RA;US)
Molten salt research and development in Japan, 12:22625 (RA;US)
Spectroscopy
Spectral methods in the characterization of molten salts, 12:22616 (RA;US)
Thermodynamic Properties
Prediction of thermodynamic properties of molten salt solutions, 12:22615 (RA;US)
MOLYBDATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Catalytic Effects
Coal conversion and hydrogen utilization in catalytic liquefaction at low temperatures, 12:22104 (RA;US)
MOLYBDENUM
Catalytic Effects
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
The activity of functionalized-carbon supported catalysts for coal asphaltene conversion, 12:22105 (RA;US)
Electrodeposition
Chemistry and electrochemistry of molybdenum plating from molten salts, 12:22637 (RA;US)
Corrosion resistant coatings for high-temperature sulfur and sulfide batteries, 12:22638 (RA;US)
Photoelectron Spectroscopy
Surface chemistry of model Co-Mo catalysts supported on planar gamma-Al/sub 2/O/sub 3/: Quarterly technical progress report for period December 1, 1986 to February 28, 1987, 12:22132 (R;US)
Physical Radiation Effects
Characterization of atomic defects and their aggregates using positron annihilation spectroscopy, 12:22917 (J;US)
Shock Waves
Shock-impedance-match experiments at pressures to 2.5 TPa (25 Mbar), 12:22871 (R;US)
Sputtering
Cluster emission from a molybdenum surface, 12:24100 (R;US)
Superlattices
Nanocontact measurements in superlattices, 12:22824 (R;US)
MOLYBDENUM 95 TARGET
Neutron Reactions
/sup 95/Mo(n,α) and /sup 143/Nd(n,α) reactions with 3 MeV neutrons, 12:23969 (RA;CS;In Slovak)
MOLYBDENUM ALLOYS
See also INCONEL 617
NIMONIC PE16
STAINLESS STEEL-316
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission IV, 12:24131 (J;NL)
MOLYBDENUM CARBIDES
Electrodeposition
Corrosion resistant coatings for high-temperature sulfur and sulfide batteries, 12:22638 (RA;US)
MOLYBDENUM COMPOUNDS
See also MOLYBDATES
MOLYBDENUM CARBIDES
MOLYBDENUM OXIDES
MOLYBDENUM SULFIDES
Catalytic Effects
Catalysts via hydrous metal oxide ion exchangers, 12:22101 (RA;US)
Organic vehicle, catalyst, water: Interplay of three aids to coal hydroliquefaction, 12:22107 (RA;US)
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission IV, 12:24131 (J;NL)
MOLYBDENUM ISOTOPES
Nuclear Deformation
Development of deformation in molybdenum isotopes, 12:24005 (RA;SU;In Russian)
MOLYBDENUM OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction, 12:22103 (RA;US)

Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)

MOLYBDENUM SULFIDES
Catalytic Effects
Enhanced coal liquefaction by low-severity catalytic reactions: Technical progress report for the period December 1986 to February 1987, 12:22136 (R;US)
Improved catalysts for coal liquefaction, 12:22103 (RA;US)
Tribology
A statistical study of the combined effects of substrate temperature, bias, annealing, and a Cr_3Si_2 undercoating on the tribological properties of rf-sputtered MoS_2 coatings, 12:22959 (R;US)

MOMENTUM (ANGULAR)

MONOCLONAL ANTIBODIES
Biological Localization
Monoclonal antibodies for diagnosis and therapy, 12:23551 (RA;US)

MONTE CARLO METHOD
Computer Calculations
Some problems on high speed computation of Monte Carlo code, 12:24334 (RA;JP;In Japanese)

MORTALITY
Epidemiology
A system for the analysis of cohort mortality data, 12:23617 (R;US)

MULTICHARGED IONS
Ions with charge 3 and above. Coordinate the above descriptor with a descriptor for the specific ion.
Electron-Ion Collisions
Additional effective mechanism of exciting multicharged ions in a dense plasma, 12:23810 (RA;SU;In Russian)
Excitation
Additional effective mechanism of exciting multicharged ions in a dense plasma, 12:23810 (RA;SU;In Russian)
Reviews
Spectroscopy of heavy few-electron ions, 12:23801 (R;DE)

MULTI-ELEMENT ANALYSIS
For analysis of 2 or more elements or isotopes of different elements.
Multi-elemental analysis techniques at Lucas Heights, 12:23053 (RA;AU)

MULTILAMELLAR LIPID VESICLES
See LIPOSOMES

MULTIPERIPHERAL MODEL
Particle Production
Diffractive dissociation of neutrons into AK/sup 0/ on carbon at 45 GeV, 12:23834 (RA;CS;In Slovak)

MULTIPHASE FLOW
Information
Laser velocimeter measurements of solids in multiphase flow: Quarterly technical progress report covering the period December 1, 1986 to February 28, 1987, 12:23387 (R;US)

MULTIPLE PRODUCTION
Si Semiconductor Detectors
Performance of a novel silicon detector, 12:23382 (J;NL)

MULTIPROCESSING
See PARALLEL PROCESSING

MULTIPROCESSORS
See ARRAY PROCESSORS

MULTISPHERE NEUTRON DETECTORS
See BONNER SPHERE DETECTORS

MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS

MULTIWIRE PROPORTIONAL CHAMBERS

Exploration
Depositional setting and facies relations in Upper Permian red beds of the Palo Duro Basin, Texas Panhandle, 12:22183 (BA;US)
Geologic History
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
Geophysics
Well logging for physical properties, 12:22182 (B;US)
Reservoir Rock
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
Well Logging
Well logging for physical properties, 12:22182 (B;US)

NATURAL GAS DISTRIBUTION SYSTEMS
Plumbing
Advanced systems development - interior piping materials/configuration. Topical report, design concepts, March 1985-October 1986, 12:22212 (R;US)
NATURAL GAS FIELDS
Data Base Management
Oil and Gas Field Code Master List (1986) and Oil and Gas Invalid Field Record List. Data file, 12:22180 (R;US)
NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS
NATURAL GAS HYDRATE DEPOSITS
Exploration
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
Resource Assessment
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
NATURAL GAS INDUSTRY
Competition
The evolving natural gas market, 12:22208 (BA;US)
Economics
Monthly energy review, December 1986, 12:22172 (R;US)
NATURAL GAS LIQUIDS
See also LIQUEFIED PETROLEUM GASES
Recovery
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
NATURAL GAS WELLS
Directional Drilling
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
Fracturing
Morgantown Energy Technology Center technology status report: Eastern gas shales, 12:22204 (R;US)
NATURAL GASOLINE
See NATURAL GAS LIQUIDS
NATURAL RADIOACTIVITY
For unspecified naturally occurring radioisotopes only; not for BACKGROUND RADIATION.
Neoplasms
Natural radioactivity and cancer risk, 12:24095 (R;NO;In Norwegian)
Uses
Application of environmental Cs-137 techniques to problems of sediment redistribution Sungai Lui Representative Basin, Selangor, Malaysia, 12:23418 (R;MY)
NEGATIVE IONS
See ANIONS
NEGATONS
See ELECTRONS
NEGATRONS
See ELECTRONS
NEODYMIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Crystal-Phase Transformations
Static high pressure studies on Nd and Sc, 12:22870 (R;US)
Distribution
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
NEODYMIUM 143 TARGET
Neutron Reactions
/sup 95/Mo(n,α) and /sup 143/Nd(n,α) reactions with 3 MeV neutrons, 12:23969 (RA;CS;In Slovak)
NEODYMIUM 150 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)
NEODYMIUM IONS
Distribution
Neodymium ion distribution in Nd YAG crystals, 12:22945 (RA;IL)
Multi-Photon Processes
Two-photon-absorption cross section of Nd/sup 3+/ in yttrium aluminum garnet and yttrium lithium fluoride near 1.06 μm, 12:22963 (J;US)
NEOGENE PERIOD
See TERTIARY PERIOD
NEON
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
Photoionization
Multiphoton ionization in intense ultraviolet laser fields, 12:23792 (R;US)
NEON ISOTOPES
Deuteron Reactions
Systematic study of the deuteron scattering on even-even sd-shell nuclei by means of the particle-gamma angular correlation at E/sub d/=10 MeV, 12:23954 (R;DE;In German)
NEONATES
Fertility
Fertility following neonatal gamma irradiation, 12:23635 (RA;IL)
Ovulation
Altered ovarian responsiveness to gonadotropins in neonatally irradiated immature female rats, 12:23636 (RA;IL)
NEOPLASMS
See also CARCINOMAS
GLIOMAS
LEUKEMIA
LYMPHOMAS
SARCOMAS
Dose-Response Relationships
Radiation and cancer in Sweden after the Chernobyl accident, 12:22555 (RA;SE;In Swedish)
Epidemiology
Biological effects of extremely-low-frequency magnetic fields, 12:23716 (R;US)
Histology
Image cytometry of duct cells from benign and malignant breast disease, 12:23618 (R;US)
Natural Radioactivity
Natural radioactivity and cancer risk, 12:24095 (R;NO;In Norwegian)
Neutron Capture Therapy
Boronated monoclonal antibody conjugates for neutron capture therapy, 12:23608 (J;US)
Optimization of epithermal neutron beams for neutron capture therapy, 12:23607 (J;US)
Potential for boron neutron capture enhancement of Cf-252 brachytherapy treatment of localized tumors, 12:23591 (J;US)
Neutron Therapy
Boron uptake in tumors, cerebrum and blood from [^{10}B]$Na_4B_{24}H_{22}S_8$, 12:23590 (P;US)
Experience with and potential of Cf-252 therapy for other tumors: Lexington clinical trials, 12:23601 (J;US)
Facilities and remote afterloading for Cf-252 brachytherapy, 12:23595 (J;US)
Facility design, environmental protection, and planning method for Cf-252 therapy at the Cancer Institute Hospital, Tokyo, 12:23594 (J;US)
Metronidazole in the treatment of cervical cancer using Cf-252 neutron brachytherapy, 12:23600 (J;US)
Microdosimetric studies of Cf-252, 12:23606 (J;US)
Neutron effects in humans: Protection considerations, 12:23673 (J;US)

Treatment of bulky stage IB and IIB cervical cancers with outpatient neutron brachytherapy, external pelvic radiation and extrafascial hysterectomy, 12:23597 (J;US)
Tumor and normal tissue effects and therapeutic gain factor for Cf-252, 12:23593 (J;US)
Radioinduction
Analysis of mortality from different causes of death in mice exposed to fast neutrons, 12:23631 (RA;FR)
Experimental studies on neutron carcinogenesis: their possible relevance for radiation protection, 12:23630 (RA;FR)
Mammalian cytogenetics, 12:23561 (RA;US)
Radiation and cancer incidence - some reflections on the Swedish cancer panorama, 12:22554 (RA;SE;In Swedish)
Radiation carcinogenesis, 12:23664 (RA;US)
Radiotherapy
Acute and chronic protection by WR2721 of rat parotid gland weight and function, 12:23685 (BA;US)
Historical review of californium-252 discovery and development, 12:23592 (J;US)
Ultrastructural Changes
Image cytometry of duct cells from benign and malignant breast disease, 12:23618 (R;US)

NEPTUNIUM
Calibration Standards
1984 EC enquiry into the needs for nuclear reference materials (Z>89), 12:22998 (RA;XA)
Advances in chemical standards for nuclear fuel analysis and safeguards purposes. Report of a consultants' meeting on nuclear reference materials, needs and availability held in Antwerp, Belgium, 8-11 October 1985, 12:22997 (R;XA)
Distribution
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)

NEPTUNIUM 243
Half-Life
Continous separation and identification of neutron-rich neptunium isotopes from heavy-ion reactions by means of the centrifuge system SISAK, 12:23178 (J;CH)

NEPTUNIUM ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)

NEPTUNIUM ARSENIDES
Crystal-Phase Transformations
Neutron diffraction study of a NpAs single crystal, 12:23098 (RA;IL)
Neutron Diffraction
Neutron diffraction study of a NpAs single crystal, 12:23098 (RA;IL)

NEPTUNIUM FLUORIDES
Chemical Reactions
Low temperature preparation of actinide hexafluorides by O_2F_2 and KrF_2, 12:23181 (J;CH)

NEPTUNIUM ISOTOPES
See also NEPTUNIUM 243
Decay
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
Half-Life
Continous separation and identification of neutron-rich neptunium isotopes from heavy-ion reactions by means of the centrifuge system SISAK, 12:23178 (J;CH)
Isotope Production
Continous separation and identification of neutron-rich neptunium isotopes from heavy-ion reactions by means of the centrifuge system SISAK, 12:23178 (J;CH)

NETWORKS (COMPUTER)
See COMPUTER NETWORKS

NEUROSPORA
DNA Sequencing
Polymorphism in the ribosomal RNA genes in three heterothallic species of Neurospora, 12:23571 (J;US)

NEUTRAL BEAM SOURCES
Design
Conceptual design of negative-ion based 500 keV 20 MW neutral beam injector, 12:24291 (R;JP;In Japanese)

NEUTRINO-NUCLEON INTERACTIONS
See also ANTINEUTRINO-NUCLEON INTERACTIONS
Deep Inelastic Scattering
Is there a way to measure the deep-inelastic cross-section using wide-band neutrino beams?, 12:23858 (R;US)
Measurement of sin²theta/sub W/ and rho in deep inelastic neutrino-nucleon scattering, 12:23843 (J;NL)

NEUTRINOS
Counting Techniques
Modifications in neutrino counting due to additional gauge bosons, 12:23902 (J;US)
Particle Production
Modifications in neutrino counting due to additional gauge bosons, 12:23902 (J;US)

NEUTRON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
NEUTRON REACTIONS

NEUTRON BEAMS
Collimators
Beam shaping blocks device for neutron therapy in Orleans, 12:23275 (RA;FR)
Spectral neutron fluence and tissue kerma in collimated neutron beams from Be + d, 12:24055 (RA;FR)
Depth Dose Distributions
Effect of using air in tissue-equivalent ionization chambers for the measurement of fast neutron absorbed dose distributions in phantoms, 12:24090 (RA;FR)
Isodose determination in a mixed n, gamma-beam, 12:23576 (RA;FR)
Neutron-beam depth-dose dosimetry and spectrometry in water phantom using SSNTDS and multigroup transport calculations, 12:24091 (RA;FR)
Total absorbed dose variations in different phantom materials of different neutron beam qualities, 12:24089 (RA;FR)
Epithermal Neutrons
Optimization of epithermal neutron beams for neutron capture therapy, 12:23607 (J;US)
Neutron Dosimetry
Dosimetric characteristics of reactor neutron beams for radiobiological applications, 12:23339 (RA;FR)
Neutron Sources
Comparison of the filtered-neutron beams at the NBS and PTB reactors by calibrating a spherical rem meter, 12:24087 (RA;FR)
Status of filtered neutron beam studies, 12:24088 (RA;FR)
Optimization
Optimization of epithermal neutron beams for neutron capture therapy, 12:23607 (J;US)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON CAPTURE THERAPY
Monoclonal Antibodies
Boronated monoclonal antibody conjugates for neutron capture therapy, 12:23608 (J;US)
Neutron Beams
Optimization of epithermal neutron beams for neutron capture therapy, 12:23607 (J;US)
Optimization
Depth dose optimization for neutron capture therapy, 12:23577 (RA;FR)
Radiation Doses
Acute CNS syndrome from $^{10}B(n,\alpha)^{7}Li$ irradiation of mouse brain, 12:23609 (J;US)

NEUTRON DETECTION
Time-of-Flight Method
Time of flight system for polarization measurement of photoneutrons from the /sup 2/H(γ,n) reaction, 12:23940 (RA;IL)

NEUTRON DETECTORS
See also PROTON RECOIL DETECTORS
Design
Organic metal neutron detector, 12:23371 (P;US)

Organic Polymers
Organic metal neutron detector, 12:23371 (P;US)
NEUTRON DIFFRACTION
Position Sensitive Detectors
Use of wire chambers in structural biology, 12:23379 (J;NL)
NEUTRON DOSIMETRY
Dose mean lineal energy for computer simulated proton tracks, 12:24053 (RA;FR)
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)
Accuracy
Summary and analysis of neutron measurements conducted during the Oak Ridge personnel dosimetry intercomparison studies, 12:23287 (R;US)
Activation Detectors
Use of threshold activation detectors to obtain neutron kerma for biological irradiations, 12:23337 (RA;FR)
Albedo-Neutron Dosemeters
Estimation by means of albedo fluence calculations of the response of individual neutron dosemeters fixed to phantoms, 12:24068 (RA;FR)
Investigation of room scattered neutrons and their importance for the calibration of albedo dosemeters, 12:24086 (RA;FR)
Measurement of neutron field quantities using the single sphere albedo technique, 12:23301 (RA;FR)
Bonner Sphere Detectors
Least squares unfolding and error analysis of Bonner sphere neutron measurements: application to PWR and Little Boy critical assembly measurements, 12:23302 (RA;FR)
Bonner Sphere Spectrometers
Influence of neutron spectra and fluence response data on the determination of dose equivalent with Bonner spheres, 12:23369 (R;DE)
Spectral analysis of some fission neutron sources with the SOHO code from Bonner sphere data, 12:24082 (RA;FR;In French)
Bragg Gray Chambers
Wsub(N) for methane-based TE-gas and carbon dioxide and Wsub(N) and gas-to-wall dose conversion factors for TE/TE cavities, 12:23290 (RA;FR)
Calorimetric Dosemeters
Neutron dosimetry with a water calorimeter, 12:23345 (RA;FR)
Chemical Dosemeters
Dosimetric characteristics of the chlorobenzene-ethanol-trimethylpentane (CET) system and DL-M4 dosimeter for neutrons produced by neutron generator and cyclotron, 12:23331 (RA;FR)
Spatial distribution of free radicals produced by neutrons, 12:23332 (RA;FR)
Comparative Evaluations
Comparison of fast neutron personnel dosimeters around an electron accelerator, 12:23311 (RA;FR)
Neutron dosimetry measurements at the Bureau International des Poids et Mesures, 12:23347 (RA;FR)
Depth Dose Distributions
New trends in the ICRU sphere, 12:24067 (RA;FR)
Dielectric Track Detectors
Dosimetric characteristics of reactor neutron beams for radiobiological applications, 12:23339 (RA;FR)
Electrochemical etching and angular dependence of CR-39 neutron detectors, 12:23308 (RA;FR)
Energy angle dependence of response of the NRPB CR-39 fast neutron dosemeter, 12:23309 (RA;FR)
Estimation by means of albedo fluence calculations of the response of individual neutron dosemeters fixed to phantoms, 12:24068 (RA;FR)
Fully automated analysis of proton etched tracks in CR-39 plastic application in neutron spectroscopy and 10 μSv dosimetry, 12:23307 (RA;FR)
Neutron dosimetry system based on the chemical etch of CR-39, 12:23310 (RA;FR)
Passive neutron dose equivalent meter for environmental and area monitoring in the low dose range, 12:23304 (RA;FR)
Protons and neutrons registration by chemically and electrochemically etched CR-39 detectors, 12:23305 (RA;FR)
Digital Systems
Digital approach to neutron dosimetry and microdosimetry, 12:23316 (RA;FR)
Dose Equivalents
Conceptual basis for neutron radiation protection, 12:24064 (RA;FR)
Field measurements of neutron energy and angle spectral distribution and their interpretations in terms of relevant radiological protection quantities, 12:24070 (RA;FR)
Improved operational quantity for neutron radiation protection monitoring, 12:24066 (RA;FR)
Neutron and photon fluence-to-dose conversion factors for active marrow of the skeleton, 12:24069 (RA;FR)
Neutron occupational exposure and radiological protection, 12:24071 (RA;FR)
Problems of a consistent assessment of the individual dose in mixed neutron-photon radiation fields, 12:24065 (RA;FR)
Studies of dose as a function of depth in water-filled phantoms exposed around the CERN accelerators, 12:24079 (RA;FR)
Electron Spin Resonance
Spatial distribution of free radicals produced by neutrons, 12:23332 (RA;FR)
Extrapolation Chambers
Neutron dose measurements across an Al - A-150 interface using extrapolation chambers, 12:23321 (RA;FR)
Geiger-Mueller Counters
Ksub(u)-values of a ZP1300 Geiger-Mueller counter between 0.7 and 7.5 MeV, 12:23323 (RA;FR)
Interlaboratory Comparisons
Dosimetry intercomparison in 3 MeV and 14 MeV neutrons beams, 12:23336 (RA;FR;In French)
Dosimetry intercomparison between Seattle, Cleveland and Louvain-la-Neuve in p(65) + Be and p (45) + Be neutron beams, 12:23343 (RA;FR)
Experimental procedures for the on-site neutron dosimetry intercomparison ENDIP-2, 12:23341 (RA;FR)
International fluence rate intercomparison for 2.5, 5.0 and 14 MeV neutrons, 12:24092 (RA;FR)
Neutron dosimetry intercomparison between Ghent and Louvain-la-Neuve, 12:23342 (RA;FR)
Ionization Chambers
Characteristics of high-pressure ionization chambers with several filling gases in neutron and photon fields, 12:23319 (RA;FR)
Comparison of two ionisation chambers for neutron dosimetry, 12:23318 (RA;FR)
Determination of dose components in mixed gamma neutron fields by use of high pressure ionization chambers, 12:23320 (RA;FR)
Digital approach to neutron dosimetry and microdosimetry, 12:23316 (RA;FR)
Dosimetric characteristics of reactor neutron beams for radiobiological applications, 12:23339 (RA;FR)
Modification of neutron response of a TE ionization chamber for radiological protection purpose, 12:23294 (RA;FR)
Neutron response of ion chamber photon dosemeters for neutron energies between 144 keV and 15.5 MeV, 12:23322 (RA;FR)
W-value measurements for protons in tissue-equivalent gas and its constituent gases, 12:24072 (RA;FR)
Kerma
Critical evaluation of neutron kerma factors using theoretical and experimental ionization yield spectra, 12:24075 (RA;FR)
Determination of kerma in A-150 plastic for various neutron fields using three different methods, 12:24074 (RA;FR)
Measured neutron carbon kerma factors from 14.1 MeV to 18 MeV, 12:24073 (RA;FR)
Neutron fluence and kerma free in air in a fission beam, 12:23338 (RA;FR)
Use of threshold activation detectors to obtain neutron kerma for biological irradiations, 12:23337 (RA;FR)

Liquid Scintillation Detectors
Bubble-damage polymer detectors for neutron dosimetry, 12:23348 (RA;FR)
Lyoluminescence
Spatial distribution of free radicals produced by neutrons, 12:23332 (RA;FR)
Meetings
Proceedings of the 5. Symposium on neutron dosimtery radiation protection aspects, 12:23289 (R;FR)
Proceedings of the 5. symposium on neutron dosimetry beam dosimetry, 12:23315 (R;FR)
Monte Carlo Method
Neutron depth dose calculations and measurements in an elliptical phantom for radiation protection purposes, 12:24080 (RA;FR)
Recent improvements in neutron energy deposition calculations, 12:24078 (RA;FR)
Neutron Sources
Measurement of the neutron source strength ratio of the D_2O-moderated ^{252}Cf-source to that of the bare ^{252}Cf-source, 12:24083 (RA;FR)
Neutron Spectrometers
CR39 neutron spectrometer with application in 10 μSv dosimetry, 12:23306 (RA;FR)
Development of hydrogen proportional counter spectrometry for radiological protection, 12:23298 (RA;FR)
Directional neutron monitor for leak tracing in low energy accelerator installations, 12:23303 (RA;FR)
New devices for the operational spectrometry and dosimetry of neutrons, 12:23333 (RA;FR)
Neutron Transport
Monte Carlo calculation of energy deposition and ionization yield for high energy protons, 12:24077 (RA;FR)
Proportional Counters
Development and use of a tissue equivaient proportional counter analysis system to measure the dose delivered to the gut of an anthropomorphic phantom from a fission source, 12:23295 (RA;FR)
Development of hydrogen proportional counter spectrometry for radiological protection, 12:23298 (RA;FR)
Dosimetric studies with non-hydrogeneous proportional counters in well defined high energy neutron fields, 12:23292 (RA;FR)
Light rem-counter of advanced technology, 12:23300 (RA;FR)
Microdosimetric experiments at a light and heavy water moderated Cf-fission neutron sources, 12:23296 (RA;FR)
Personnel monitors utilizing tissue equivalent proportional counters, 12:23297 (RA;FR)
Portable microdosimetry system, 12:23293 (RA;FR)
Practical implementation of microdosimetric counters in radiation protection, 12:23291 (RA;FR)
Rem-meter based on tissue equivalent proportional counter, 12:23299 (RA;FR)
Proton Recoil Detectors
Code for fast neutron dosimetry, 12:23312 (RA;FR)
Research Programs
DOE personnel neutron dosimeter evaluation and upgrade program: Informational statement on DOE activities, 12:23313 (RA;FR)
Silicon Diodes
Use of fast neutron dosimeter diodes for in-vivo dosimetry in neutron therapy, 12:23340 (RA;FR)
Thermoluminescent Dosemeters
Application of a personal computer for analysis and data reduction of TLD-300 glow curves for dosimetry in mixed neutron and photons fields, 12:23326 (RA;FR)
Dosimetric characteristics of reactor neutron beams for radiobiological applications, 12:23339 (RA;FR)
Laser heated thermoluminescence dosimetry of mixed neutron-gamma fields, 12:23329 (RA;FR)
Passive neutron dose equivalent meter for environmental and area monitoring in the low dose range, 12:23304 (RA;FR)
Relative sensitivity of thermoluminescent material to neutrons: a review of available data, 12:23324 (RA;FR)
Response of CaF_2:TM (TLD-300) to monoenergetic fast neutrons, 12:23327 (RA;FR)
Spectral dependence of response coefficients and applicability of the two-peak TLD method in mixed neutron-photon radiation fields, 12:23325 (RA;FR)
Use of TLD-detectors for reactor mixed field dosimetry, 12:23328 (RA;FR)
Thermoluminescent Dosimetry
Thermoluminescence albedo-neutron dosimetry, 12:23367 (R;NO)

NEUTRON FLUENCE
Activation Detectors
Neutron fluence and kerma free in air in a fission beam, 12:23338 (RA;FR)
Measuring Methods
Neutron fluence and kerma free in air in a fission beam, 12:23338 (RA;FR)
Monte Carlo Method
Spectral neutron fluence and tissue kerma in collimated neutron beams from Be + d, 12:24055 (RA;FR)
Multi-Channel Analyzers
Time dependence of the fluence rate of thermal neutrons in a human phantom after irradiation with 15 MeV by the pulsed source method, 12:23349 (RA;FR)

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON MOISTURE METERS
See MOISTURE GAGES

NEUTRON MONITORS
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
Calibration
Calibration of neutron survey meters over the energy range from 1 to 30 keV with accelerator produced monoenergetic neutrons, 12:24085 (RA;FR)
Performance
Field measurements of neutron energy and angle spectral distribution and their interpretations in terms of relevant radiological protection quantities, 12:24070 (RA;FR)

NEUTRON OSCILLATION
Process of a reversible neutron-antineutron transformation.
Search for n-n-bar oscillations by measurement of nucleon emission from n-bar annihilations in the nucleus, 12:23359 (RA;CS;In Slovak)

NEUTRON RADIOGRAPHY
Calibration
Assessment of radiographic image quality by visual examination of neutron radiographs of the calibration fuel pin, 12:23236 (R;DK)
Reference neutron radiographs of nuclear reactor fuel, 12:23233 (R;DK)
Drift Chambers
Multiwire position sensitive chambers operatred with low pressure isobutane, 12:23363 (RA;CS;In Czech)
Images
Assessment of radiographic image quality by visual examination of neutron radiographs of the calibration fuel pin, 12:23236 (R;DK)
Information Dissemination
International neutron radiography newsletter, 12:23235 (R;DK)
Neutron Beams
Can neutron beam components and radiographic image quality be determined by the use of beam purity and sensitive indicators?, 12:23237 (R;DK)
Standardization
Euratom neutron radiography working group, 12:23234 (R;DK)
Tomography
Neutron tomography of damaged fuel assemblies, 12:23238 (J;US)

NEUTRON REACTIONS
Alpha Spectra
Telescope for study of (n,α) reactions, 12:23358 (RA;CS;In Slovak)
Alpha Spectrometers
Telescope for study of (n,α) reactions, 12:23358 (RA;CS;In Slovak)

Capture
Nuclear structure studies on /sup 178/Hf by means of neutron induced gamma and electron spectroscopy, 12:23972 (R;DE;In German)
Compound-Nucleus Reactions
Spin-spin potentials in /sup 27/Al/sub pol/+n/sub pol/ and the nuclear Ramsauer effect, 12:23956 (J;US)
Cross Sections
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)
Differential Cross Sections
Gamma ray production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb at 90 deg., 12:23957 (R;XA)
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)
Potential Scattering
Scattering of polarized neutrons on argon and study of the complex spin-orbit potential, 12:23958 (R;DE;In German)

NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Calibration Standards
Measurement of the neutron source strength ratio of the D_2O-moderated ^{252}Cf-source to that of the bare ^{252}Cf-source, 12:24083 (RA;FR)
Design
Switchable radioactive neutron source, 12:22350 (J;US)
KeV Range 01-10
Calibration of neutron survey meters over the energy range from 1 to 30 keV with accelerator produced monoenergetic neutrons, 12:24085 (RA;FR)
Monoenergetic neutrons of energies from 0.5 keV to 40 keV via the reaction $^{45}Sc(p,n)^{45}Ti$, 12:24084 (RA;FR)
KeV Range 10-100
Calibration of neutron survey meters over the energy range from 1 to 30 keV with accelerator produced monoenergetic neutrons, 12:24085 (RA;FR)
Monoenergetic neutrons of energies from 0.5 keV to 40 keV via the reaction $^{45}Sc(p,n)^{45}Ti$, 12:24084 (RA;FR)
Lithium 7 Target
Use of ^{7}Li D as target material for the MEDICYC mentions source, 12:22345 (RA;FR;In French)
Long Counters
Neutron fluence rate measurements for energies from 130 keV to 1900 keV, 12:23346 (RA;FR)
Microdosimetry
Microdosimetric experiments at a light and heavy water moderated Cf-fission neutron sources, 12:23296 (RA;FR)
Neutron Beams
Comparison of the filtered-neutron beams at the NBS and PTB reactors by calibrating a spherical rem meter, 12:24087 (RA;FR)
Status of filtered neutron beam studies, 12:24088 (RA;FR)
Neutron Detection
Neutron fluence rate measurements for energies from 130 keV to 1900 keV, 12:23346 (RA;FR)
Neutron Spectroscopy
Multisphere spectrometry of the neutron field due to a D_2O moderated ^{252}Cf-source in a calibration room, 12:24081 (RA;FR)
Performance
Technical modifications at the DT-neutron generator for tumor therapy at Hamburg-Eppendorf, 12:22346 (RA;FR)
Proportional Counters
Neutron fluence rate measurements for energies from 130 keV to 1900 keV, 12:23346 (RA;FR)
Scintillation Counters
Neutron fluence rate measurements for energies from 130 keV to 1900 keV, 12:23346 (RA;FR)

NEUTRON SPECTRA
Proton Recoil Detectors
Measurement of d(4)-^{9}Be neutron spectrum using a recoil proton spectrometer, 12:23335 (RA;FR)
Spectra Unfolding
Covariance matrix of neutron spectra used in the REAL 84 exercise, 12:23368 (R;DE)

NEUTRON SPECTROMETERS
See also BONNER SPHERE SPECTROMETERS
Design
Directional neutron monitor for leak tracing in low energy accelerator installations, 12:23303 (RA;FR)
Fission Chambers
New devices for the operational spectrometry and dosimetry of neutrons, 12:23333 (RA;FR)
He-3 Counters
New devices for the operational spectrometry and dosimetry of neutrons, 12:23333 (RA;FR)
Proportional Counters
Development of hydrogen proportional counter spectrometry for radiological protection, 12:23298 (RA;FR)
Specifications
CR39 neutron spectrometer with application in 10 μSv dosimetry, 12:23306 (RA;FR)
Development of hydrogen proportional counter spectrometry for radiological protection, 12:23298 (RA;FR)

NEUTRON SPECTROSCOPY
Bonner Sphere Spectrometers
Multisphere spectrometry of the neutron field due to a D_2O moderated ^{252}Cf-source in a calibration room, 12:24081 (RA;FR)
Multisphere measurements at a heavy water moderated Cf-252 fission source, 12:23314 (RA;FR)
Dielectric Track Detectors
Fully automated analysis of proton etched tracks in CR-39 plastic application in neutron spectroscopy and 10 μSv dosimetry, 12:23307 (RA;FR)
Neutron Spectrometers
New devices for the operational spectrometry and dosimetry of neutrons, 12:23333 (RA;FR)
Time-of-Flight Spectrometers
Fission neutron time-of-flight spectrometer, 12:23354 (RA;CS;In Slovak)

NEUTRON THERAPY
See also NEUTRON CAPTURE THERAPY
Cyclotrons
Beam shaping blocks device for neutron therapy in Orleans, 12:23275 (RA;FR)
Fast neutron therapy facility at the Pretoria cyclotron, 12:23258 (RA;FR)
Recent development of the neutrontherapy facility at the cyclotron Cyclone in Louvain-la-Neuve, 12:23259 (RA;FR)
Superconducting cyclotron for neutron radiotherapy, 12:23260 (RA;FR)
University of Texas M.D. Anderson Hospital Cyclotron Facility, 12:23257 (RA;FR)
Neutron Dosimetry
Use of fast neutron dosimeter diodes for in-vivo dosimetry in neutron therapy, 12:23340 (RA;FR)
Neutron Sources
Technical modifications at the DT-neutron generator for tumor therapy at Hamburg-Eppendorf, 12:22346 (RA;FR)
Use of ^{7}Li D as target material for the MEDICYC mentions source, 12:22345 (RA;FR;In French)
Planning
Intercomparison of the treatment planning systems used for neutron beams in Europe, 12:23578 (RA;FR)
Monte-Carlo calculations for a pencil beam model used in treatment planning for d(14) + Be neutrons, 12:23579 (RA;FR)
Physical treatment planning by several approaches, 12:23581 (RA;FR)
Verification of a commercially available treatment planning, system used for neutron treatment planning, 12:23580 (RA;FR)

NEUTRON TRANSPORT
Monte Carlo Method
Influence of neutron transport phenomena on kerma, absorbed dose and energy deposition spectra, 12:24076 (RA;FR)

Some problems on high speed computation of Monte Carlo code, 12:24334 (RA;JP;In Japanese)
NEUTRON TRANSPORT THEORY
Adjoint Flux
Adjoint vs. forward solution of anisotropic transport problems, 12:24056 (RA;IL)
Discrete Ordinate Method
Diffusion-synthetic method for acceleration of linear nodal S/sub n/ calculations, 12:24059 (J;US)
Monte Carlo Method
Vectorization of three-dimensional general-geometry Monte Carlo, 12:24060 (J;US)
Neutron Flux
Adjoint vs. forward solution of anisotropic transport problems, 12:24056 (RA;IL)
NEUTRON-ANTINEUTRON INTERACTIONS
Some characteristics of d-bard and n-barn interactions at 12.2 GeV/c, 12:23832 (RA;CS;In Slovak)
NEUTRON-RICH ISOTOPES
Gamma Spectra
Continous separation and identification of neutron-rich neptunium isotopes from heavy-ion reactions by means of the centrifuge system SISAK, 12:23178 (J;CH)
Isotope Production
Continous separation and identification of neutron-rich neptunium isotopes from heavy-ion reactions by means of the centrifuge system SISAK, 12:23178 (J;CH)
NEUTRONS
See also FAST NEUTRONS
FISSION NEUTRONS
PHOTONEUTRONS
Biological Radiation Effects
Neutron effects in humans: Protection considerations, 12:23673 (J;US)
Carcinogenesis
Experimental studies on neutron carcinogenesis: their possible relevance for radiation protection, 12:23630 (RA;FR)
Inelastic Scattering
Use of the Boltzmann-equation for calculating the scattering law in gases, 12:24180 (R;AT)
Polarized Products
Charge asymmetry in d+d reactions, 12:23943 (RA;CS;In Czech)
Scattering
Applications of neutron scattering to problems in materials science, 12:22935 (J;US)
NEVADA
Geothermal Resources
Geothermal mineralization. I. The mechanism of formation of the Beowawe, Nevada, Siliceous sinter deposit, 12:22389 (J;US)
NEVADA TEST SITE
Geologic Faults
Logs of trenches across the Beatty scarp, Nye County, Nevada, 12:23726 (R;US)
Topography
Logs of trenches across the Beatty scarp, Nye County, Nevada, 12:23726 (R;US)
NEW MEXICO
See also JEMEZ MOUNTAINS
Radioactive Waste Disposal
Status of the WIPP - A defense transuranic waste isolation facility, 12:22320 (BA;US)
NEW ZEALAND
Lignite
Transportation of lignite to the North Island. Technical and economic evaluation of options. Summary report, 12:22166 (R;US)
Liquefied Petroleum Gases
Legal nature of LPG (liquefied petroleum gas) regulation, 12:22191 (R;US)
Vehicles
Energy use in transport: data report, 12:22785 (R;NZ)
NEWBORNS
See NEONATES
NGL
See NATURAL GAS LIQUIDS
NICKEL
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Catalytic Effects
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)
Chemical Vapor Deposition
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)
Diffusion
Diffusion and interaction with vacancies of non-transition-metal solutes in some FCC metals, 12:22921 (J;GB)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Nitrogen 14 Reactions
A $\pi 0$ spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)
Oxygen 16 Reactions
A π^0 spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)
Physical Radiation Effects
Characterization of atomic defects and their aggregates using positron annihilation spectroscopy, 12:22917 (J;US)
Heavy ion irradiation with 200 keV Ni-ions to study the swelling of iron and nickel and the technical alloys, 12:22847 (R;DE;In German)
Sulfur 32 Reactions
A π^0 spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)
Superlattices
Nanocontact measurements in superlattices, 12:22824 (R;US)
Wear Resistance
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)
NICKEL 58 TARGET
Oxygen 18 Reactions
Study of peripheral heavy ion reactions at 84 MeV/nucleon, 12:23960 (R;DE;In German)
NICKEL 61 TARGET
Alpha Reactions
Spectra of charged particles produced in the 24.6 MeV α-particle interactions with /sup 61/Ni and /sup 63/Cu nuclei, 12:23965 (RA;SU;In Russian)
NICKEL 64 TARGET
Oxygen 18 Reactions
Study of peripheral heavy ion reactions at 84 MeV/nucleon, 12:23960 (R;DE;In German)
NICKEL ALLOYS
See also NICKEL BASE ALLOYS
Chemical Reaction Kinetics
Evidence for internal dissociation during the oxidation of nickel metal, 12:22898 (BA;US)
Chemical Vapor Deposition
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)
Corrosion
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Corrosion Products
Evidence for internal dissociation during the oxidation of nickel metal, 12:22898 (BA;US)
Crack Propagation
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Creep
Microstructure-mechanical property relationships in modified 3 chrome steels, 12:22902 (BA;US)

Dissociation
Evidence for internal dissociation during the oxidation of nickel metal, 12:22898 (BA;US)
Fracture Properties
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Hydrogen Embrittlement
Microstructure-mechanical property relationships in modified 3 chrome steels, 12:22902 (BA;US)
The relationship between hydrogen-induced thresholds, fracture toughness and fracture modes in IN903, 12:22914 (BA;US)
Magnetic Susceptibility
Transition from Kondo-lattice to intermediate valence state in Ce(Cusub(1-x)Nisub(x))sub(5) compounds, 12:22844 (R;SU)
Microstructure
Microstructure-mechanical property relationships in modified 3 chrome steels, 12:22902 (BA;US)
Oxidation
Evidence for internal dissociation during the oxidation of nickel metal, 12:22898 (BA;US)
Radiation Effects
Long-term corrosion behavior of copper-base materials in a gamma-irradiated environment, 12:22873 (R;US)
Specific Heat
Transition from Kondo-lattice to intermediate valence state in Ce(Cusub(1-x)Nisub(x))sub(5) compounds, 12:22844 (R;SU)
Thermodynamic Properties
Microstructure-mechanical property relationships in modified 3 chrome steels, 12:22902 (BA;US)
Wear Resistance
Wear resistance of metastable Ni-B alloys produced by chemical vapor deposition, 12:22865 (R;US)

NICKEL BASE ALLOYS
See also HASTELLOY C
Electron Beam Welding
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
Fracture Properties
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
Grain Boundaries
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
Ion Implantation
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Physical Radiation Effects
In situ HVEM studies of electron-beam-driven composition changes in thin film alloys: displacement-rate gradient effects, 12:22916 (J;US)
Sorptive Properties
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)
Sputtering
Krypton-85 storage in sputtered-deposited amorphous metals, 12:22323 (BA;US)

NICKEL COMPOUNDS
See also NICKEL OXIDES
Bond Angle
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)
Bond Lengths
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)
Catalytic Effects
Catalysts via hydrous metal oxide ion exchangers, 12:22101 (RA;US)
Crystal Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
Molecular Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of Th(eta$_5$-C$_5$(CH$_3$)$_5$)$_2$(μ-PPh$_2$)$_2$Ni(CO)$_2$, 12:23126 (J;US)

NICKEL OXIDES
Catalytic Effects
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)
Grain Boundaries
Experimental and theoretical studies of the structure of grain boundaries: Progress report, 12:22817 (R;US)
HREM of grain boundaries in oxides, 12:22925 (R;US)

NICKEL-CADMIUM BATTERIES
Plates
Role of water molecules and protons in the active material of nickel positive plate, 12:22645 (BA;US)

NICKEL-CHROMIUM STEELS
See also ALLOY-D-9
Creep
Investigations of the influence of nitrogen and niobium on the tensile and creep-rupture behaviour of an austenitic 18/14 CrNi-steel. Final report, 12:22848 (R;DE;In German)
Tensile Properties
Investigations of the influence of nitrogen and niobium on the tensile and creep-rupture behaviour of an austenitic 18/14 CrNi-steel. Final report, 12:22848 (R;DE;In German)

NICKEL-IRON BATTERIES
See IRON-NICKEL BATTERIES

NIMONIC PE16
Physical Radiation Effects
On transport of helium grain boundaries during irradiation, 12:22864 (R;DK)

NIOBIUM
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission II, 12:24129 (J;NL)
Neutron Reactions
Gamma ray production cross sections for the interactions of 14.9 MeV neutrons with C, Al, V, Fe and Nb at 90 deg. , 12:23957 (R;XA)
Superconductivity
Effect of strain on the critical-current density of Cu-Nb composites, 12:22876 (J;US)

NIOBIUM 87
Beta-Plus Decay
Studies of nuclear high-spin levels in the mass range around Z $\cong$90 and Z $\cong$150, 12:23964 (R;DE;In German)
De-Excitation
Studies of nuclear high-spin levels in the mass range around Z $\cong$90 and Z $\cong$150, 12:23964 (R;DE;In German)
High Spin States
Studies of nuclear high-spin levels in the mass range around Z $\cong$90 and Z $\cong$150, 12:23964 (R;DE;In German)

NIOBIUM ADDITIONS
Metallurgical Effects
Investigations of the influence of nitrogen and niobium on the tensile and creep-rupture behaviour of an austenitic 18/14 CrNi-steel. Final report, 12:22848 (R;DE;In German)

NIOBIUM ALLOYS
See also INCONEL 600
NIOBIUM ADDITIONS
NIOBIUM BASE ALLOYS
Hydrogen
Hydrogen depth profiling in Zr-2.5 wt% Nb alloy, 12:22834 (RA;IL)
Thermal Diffusion
Thermotransport of hydrogen in Zr-2.5 wt% Nb alloy, 12:22833 (RA;IL)

NIOBIUM BASE ALLOYS
Interstitials
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)

Thermal Diffusion
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)

NIOBIUM CARBIDES
Electrical Properties
Optical and electrical properties of niobium carbide, 12:22929 (J;US)
Optical Properties
Optical and electrical properties of niobium carbide, 12:22929 (J;US)

NIOBIUM HYDRIDES
Elasticity
Investigation of the electronic structure and phonon anharmonicity in β- and γ-NbH, 12:22930 (J;US)
Electronic Structure
Investigation of the electronic structure and phonon anharmonicity in β- and γ-NbH, 12:22930 (J;US)
Lattice Parameters
Investigation of the electronic structure and phonon anharmonicity in β- and γ-NbH, 12:22930 (J;US)
Phonons
Investigation of the electronic structure and phonon anharmonicity in β- and γ-NbH, 12:22930 (J;US)

NIOBIUM IONS
Ion-Molecule Collisions
L-shell resonant transfer and excitation for NE-like niobium ions, 12:23796 (R;US)

NITRATES
See also LITHIUM NITRATES
POTASSIUM NITRATES
SODIUM NITRATES
URANYL NITRATES
ZIRCONIUM NITRATES
Atmospheric Precipitations
Estimation of source-receptor matrices for deposition of NO/sub x/-N, 12:23450 (J;NL)
Long-Range Transport
Estimation of source-receptor matrices for deposition of NO/sub x/-N, 12:23450 (J;NL)
Spectrophotometry
Automation of analytical work at a chemical extraction mine, 12:23017 (RA;CS;In Czech)

NITRIC ACID
Orientation
Orientation of nitrate molecules in graphite-HNO/sub 3/ residue compounds, 12:22993 (RA;IL)

NITRIC OXIDE
NO.
Multi-Photon Processes
Multiphoton ionization of nitric oxide-rare gas van der Waals species, 12:23145 (BA;US)
Van der Waals Forces
Multiphoton ionization of nitric oxide-rare gas van der Waals species, 12:23145 (BA;US)

NITRO COMPOUNDS
See also METRONIDAZOLE
Mutagenesis
Correlation of nitroaromatic compounds with the mutagenic activity of coal fly ash, 12:22179 (J;US)

NITROGEN
Breakdown
Theoretical study of electrical breakdown in nitrogen induced by laser radiation at 1.06 μm, 12:24244 (R;XA)
Compression
Molecular dissociation and shock-induced cooling in fluid nitrogen at high densities and temperatures, 12:22967 (J;US)
Cooling
Molecular dissociation and shock-induced cooling in fluid nitrogen at high densities and temperatures, 12:22967 (J;US)
Ionization
Measuring the radial density distribution of light emission around the track of fast ions in nitrogen, 12:24057 (R;DE;In German)
Phase Studies
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
Phase Transformations
Molecular dissociation and shock-induced cooling in fluid nitrogen at high densities and temperatures, 12:22967 (J;US)
Visible Radiation
Measuring the radial density distribution of light emission around the track of fast ions in nitrogen, 12:24057 (R;DE;In German)
Whole-Body Counting
AAEC total body nitrogen facility, 12:23587 (RA;AU)

NITROGEN 14 TARGET
Muon Reactions
Study of nuclear effects using structure functions of heavy nuclei nucleons, 12:23830 (RA;CS;In Czech)
Neutron Reactions
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)

NITROGEN ADDITIONS
Metallurgical Effects
Investigations of the influence of nitrogen and niobium on the tensile and creep-rupture behaviour of an austenitic 18/14 CrNi-steel. Final report, 12:22848 (R;DE;In German)

NITROGEN COMPOUNDS

NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Quality Assurance
Quality assurance in nuclear installations, 12:24320 (R;CO;In Spanish)
Safety
Computer-assisted instruction for nuclear criticality safety, 12:22331 (J;US)
Technique for appraising preventive safety at nuclear facilities, 12:22333 (J;US)
Training
Computer-assisted instruction for nuclear criticality safety, 12:22331 (J;US)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR FUELS
See also SPENT FUELS
Quantitative Chemical Analysis
Determination of uranium and plutonium, 12:23008 (RA;CS;In Czech)

NUCLEAR INDUSTRY
Regulations
Regulation and the nuclear option: Summary of a workshop on long-range nuclear power regulatory issues, August 20-21, 1986, 12:22479 (R;US)

NUCLEAR MAGNETIC RESONANCE
Computerized Simulation
Computer simulations of multiple-quantum NMR experiments. I. Nonselective excitation, 12:24134 (J;GB)

NUCLEAR MATERIALS DIVERSION
Detection
Application of a Portable Briefcase Personal Computer to research reactor safeguards, 12:22336 (RA;AU)

NUCLEAR MATERIALS MANAGEMENT
Accounting
Assay of holdup in nuclear fuel plants, a review, 12:22341 (J;US)
Statistical sampling for holdup measurement, 12:22342 (J;US)
S Codes
Development of a personal computer-based state system of accounting for/and control of nuclear materials. Final report for the period 1 July 1985-30 June 1986 (Safeguards Report Editor-State Level SSAC program), 12:22334 (R;XA)
Sampling
Statistical sampling for holdup measurement, 12:22342 (J;US)

NUCLEAR MATTER
Binding Energy
Calculation of the binding energy per nucleon and the quasi-particle interation in nuclear matter under consideration of relativistic medium effects, 12:24034 (R;DE;In German)
Energy Density
High nuclear temperatures by antimatter-matter annihiliation, 12:24048 (BA;US)
Quark Model
Behaviour of nucleon-sixquark system on temperature-density plane, 12:24004 (RA;SU)
Skyrme Potential
Skyrme interaction and the properties of cold and hot neutron matter, 12:23993 (R;XA)
Thermodynamic Properties
On the thermal properties of neutron matter with spin up excess, 12:23755 (R;XA)
Skyrme interaction and the properties of cold and hot neutron matter, 12:23993 (R;XA)
Virial Theorem
On the quantum mechanical theory of stress and force, 12:24178 (R;DK)

NUCLEAR MEDICINE
Computer Codes
Choosing measures of central tendency in biological research applications, 12:23610 (J;US)
Statistics
Choosing measures of central tendency in biological research applications, 12:23610 (J;US)

NUCLEAR MODELS
See also COLLECTIVE MODEL
CRANKING MODEL
EXCITON MODEL
PARTICLE-CORE COUPLING MODEL
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)
SP Groups
On the algebraic structure of the Hamiltonian with a quadrupole interaction, 12:24031 (R;SU;In Russian)

NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
List of publications of workers of the Institute of Nuclear Physics in Cracow. 1955-1980, 12:23934 (R;PL;In Polish)
Progress report October 1985-September 1986 of the Institute for Theoretical Physics, University of Graz, Austria, 12:24322 (R;AT;In German)
Report to the DOE Nuclear Data Committee 1987, 12:23939 (R;US)

NUCLEAR POTENTIAL
Optical Models
Nucleon optical potential: an extended three-body problem or a restricted infinite-body problem, 12:23987 (R;US)
Three-Body Problem
Nucleon optical potential: an extended three-body problem or a restricted infinite-body problem, 12:23987 (R;US)

NUCLEAR POWER
Nuclear power, 12:22677 (RA;DE;In German)
Global Aspects
Nuclear power - status and development 1985/1986, 12:22481 (R;NO;In Norwegian)

NUCLEAR POWER PLANTS
Computer Codes
Calculation analysis of radiation safety in NPP designing, 12:22539 (RA;XM;In Russian)
Code complex for the safety systems reliability assessment, 12:22545 (RA;XM;In Russian)
Computerized Simulation
Application of visual simulation technique to nuclear engineering field, 12:24337 (RA;JP;In Japanese)
Containment Systems
Alternative containment integrity retesting requirements and local leakage calculation methods, 12:22569 (RA;US)
Alternative containment integrity test methods, an overview of possible techniques, 12:22574 (RA;US)
Analytical correlation and interpretation of full scale containment specimen tests, 12:22586 (RA;US)
Crack propagation in high strain regions of a steel containment, 12:22591 (RA;US)
Hydrogen deflagration tests in hydro-sc facility, 12:22576 (RA;US)
Integrated analysis of core debris interactions and their effects on containment integrity using the CONTAIN computer code, 12:22575 (RA;US)
Pending revisions to ANS 56.8-81 containment systems leakage testing requirements, 12:22572 (RA;US)
Plastic analysis of concrete containment structure, 12:22582 (RA;US)
Results of large-scale test of discontinuity region in a prestressed concrete containment, 12:22585 (RA;US)

Review of containment examination and testing requirements, 12:22571 (RA;US)
Scaling and extrapolation of hydrogen distribution experiments, 12:22577 (RA;US)
Simplified model for concrete at low confining pressures, 12:22583 (RA;US)

Corrosion Products
Calculations of activated corrosion products transport and radioactive wastes formation on a NPP, 12:22511 (RA;XM;In Russian)

Data Compilation
Nuclear power statistics 1985, 12:22441 (R;DK)

Dose Limits
Hygiene principles for establishing the practical reference levels of the personnel radiation safety ensurance, 12:22543 (RA;XM;In Russian)

Electrical Equipment
Safety assessment of emergency electric power systems for nuclear power plants. A manual on the use of IAEA Safety Series No. 50-SG-D7: Emergency power systems at nuclear power plants, 12:22491 (R;XA)

Environmental Impacts
Main principles of NPP project ecological expert investigation, 12:22501 (RA;XM;In Russian)
Radiation risk assessment for growing nuclear power system, 12:22502 (RA;XM;In Russian)

Filters
Iodine filter adsorbent (GA-I) ageing, 12:22509 (RA;XM;In Russian)
Statistic moment technique application for investigation of the sorption ability of the NPP gaseous release clean-up system, 12:22508 (RA;XM;In Russian)

Fire Hazards
Assessment of the fire hazard in nuclear facilities, 12:22521 (R;DE;In German)

Fires
Basing of a complex design measures for protection against fire, 12:22548 (RA;XM;In Russian)

Maximum Acceptable Contamination
Regulation principles for NPP radionuclide releases into atmosphere, 12:22532 (RA;XM;In Russian)

Military Facilities
Design and acquisition process for the Multimegawatt Terrestrial Power Plant, 12:22478 (J;US)

Personnel Monitoring
Individual protection of NPP personnel, 12:22534 (RA;XM;In Russian)

Primary Coolant Circuits
Calculations of activated corrosion products transport and radioactive wastes formation on a NPP, 12:22511 (RA;XM;In Russian)

Programming
Application of visual simulation technique to nuclear engineering field, 12:24337 (RA;JP;In Japanese)
GRASYS: a computer program for graphical presentation of nuclear power plant condition, 12:24336 (RA;JP;In Japanese)

Radiation Hazards
Expected dose commitment for the USSR population with planned nuclear power system development, 12:22535 (RA;XM;In Russian)
Investigation of chemical behaviour of the fission products during accidental releases, 12:22546 (RA;XM;In Russian)
Radiation risk assessment for growing nuclear power system, 12:22502 (RA;XM;In Russian)

Radiation Protection
Basic approach to radiation safety in Cuba, 12:22541 (RA;XM;In Russian)
Principles of the environmental protection during accidents on NPPs, 12:22549 (RA;XM;In Russian)
Providing of personnel and population radiation safety during possible NPP accidents in the USSR, 12:22533 (RA;XM;In Russian)

Radioactive Effluents
Iodine filter adsorbent (GA-I) ageing, 12:22509 (RA;XM;In Russian)
Regulation principles for NPP radionuclide releases into atmosphere, 12:22532 (RA;XM;In Russian)
Statistic moment technique application for investigation of the sorption ability of the NPP gaseous release clean-up system, 12:22508 (RA;XM;In Russian)

Radioactive Wastes
Calculations of activated corrosion products transport and radioactive wastes formation on a NPP, 12:22511 (RA;XM;In Russian)

Reactor Accidents
Principles of the environmental protection during accidents on NPPs, 12:22549 (RA;XM;In Russian)
Providing of personnel and population radiation safety during possible NPP accidents in the USSR, 12:22533 (RA;XM;In Russian)

Reactor Core Disruption
Integrated analysis of core debris interactions and their effects on containment integrity using the CONTAIN computer code, 12:22575 (RA;US)

Reactor Maintenance
Individual protection of NPP personnel, 12:22534 (RA;XM;In Russian)

Reactor Operation
Mathematical and numerical models to achieve high speed with special-purpose parallel processors, 12:22611 (J;US)

Reactor Safety
Alternative containment integrity retesting requirements and local leakage calculation methods, 12:22569 (RA;US)
Analytical correlation and interpretation of full scale containment specimen tests, 12:22586 (RA;US)
CMEA country-members cooperation in radiation safety during 1976-1981, 12:22529 (RA;XM;In Russian)
Crack propagation in high strain regions of a steel containment, 12:22591 (RA;US)
Hydrogen deflagration tests in hydro-sc facility, 12:22576 (RA;US)
Integrated analysis of core debris interactions and their effects on containment integrity using the CONTAIN computer code, 12:22575 (RA;US)
Mathematical and numerical models to achieve high speed with special-purpose parallel processors, 12:22611 (J;US)
Nuclear Computerized Library for Assessing Reactor Risk (NUCLARR), 12:22608 (J;US)
Pending revisions to ANS 56.8-81 containment systems leakage testing requirements, 12:22572 (RA;US)
Radiation safety of Nuclear Power Plants operation. Book 1. Collection of papers from CMEA scientific-engineering conference, 12:22536 (R;XM;In Russian)
Review of containment examination and testing requirements, 12:22571 (RA;US)
Scaling and extrapolation of hydrogen distribution experiments, 12:22577 (RA;US)
Simplified model for concrete at low confining pressures, 12:22583 (RA;US)

Regional Analysis
Main principles of NPP project ecological expert investigation, 12:22501 (RA;XM;In Russian)

Safety
Calculation analysis of radiation safety in NPP designing, 12:22539 (RA;XM;In Russian)
Code complex for the safety systems reliability assessment, 12:22545 (RA;XM;In Russian)
Investigation of chemical behaviour of the fission products during accidental releases, 12:22546 (RA;XM;In Russian)
Reliability calculations. Improvements of methods intended for calculation of reliability of structures and systems, 12:22603 (R;DK)

Safety Engineering
Basing of a complex design measures for protection against fire, 12:22548 (RA;XM;In Russian)

Safety Standards
New sanitary regulations for NPP design and operation, SP-AEhS-79, 12:22531 (RA;XM;In Russian)

Site Surveys
Development of site specific response spectra, 12:22601 (R;US)

Working Conditions
Hygiene principles for establishing the practical reference levels of the personnel radiation safety ensurance, 12:22543 (RA;XM;In Russian)

NUCLEAR POWER STATIONS
See NUCLEAR POWER PLANTS

NUCLEAR REACTION ANALYSIS
Fourth Australian conference on nuclear techniques of analysis: Proceedings, 12:23034 (R;AU)

NUCLEAR REACTION KINETICS
Three-Body Problem
Nucleon optical potential: an extended three-body problem or a restricted infinite-body problem, 12:23987 (R;US)

NUCLEAR REACTIONS
See also DIRECT REACTIONS
HEAVY ION FUSION REACTIONS
PHOTONUCLEAR REACTIONS
Eighth conference of Czechoslovak physicists. Part I. Vol. 1, 12:23820 (R;CS;In Czech, Slovak)
Compound-Nucleus Reactions
Separation of contributions of the direct and statistical mechanisms in reactions with arbitrary spin structure in the analysis of nuclear cross section fluctuations, 12:24015 (RA;SU;In Russian)
Direct Reactions
Separation of contributions of the direct and statistical mechanisms in reactions with arbitrary spin structure in the analysis of nuclear cross section fluctuations, 12:24015 (RA;SU;In Russian)

NUCLEAR SAFETY
See RADIATION PROTECTION

NUCLEAR SHIPS
Military Personnel
Preliminary development of a nuclear propulsion officer enlistment supply model. Master's thesis, 12:22674 (R;US)

NUCLEAR SPIN RESONANCE
See NUCLEAR MAGNETIC RESONANCE

NUCLEAR STRUCTURE
Application of nuclear data to the research of nuclear theory, 12:23990 (R;XA)
Multipole Transitions
Microscopic description of electromagnetic transitions and photonuclear reactions, 12:23995 (R;DE;In German)
Three-Body Problem
Electromagnetic properties of the three-nucleon ground state, 12:23994 (R;DE;In German)

NUCLEAR WASTES
See RADIOACTIVE WASTES

NUCLEAR WEAPON TESTS
See NUCLEAR EXPLOSIONS

NUCLEAR WEAPONS
Non-Proliferation Policy
Arms control, nonproliferation, and US national security, 12:22815 (BA;US)
Is further proliferation of nuclear weapons irrelevant to US national security, 12:22814 (BA;US)
Specifications
System survey report for DOEDEF Translator Module Pool A: Volume 1, 12:24352 (R;US)
Testing
Announced United States nuclear tests, July 1945 through December 1986, 12:23399 (R;US)
Nuclear Test Program, 12:23401 (R;US)
Why nuclear testing is necessary: A nuclear weapon scientist's perspective, 12:23402 (R;US)

NUCLEASE (RIBONUCLEASE)
See RNA-ASE

NUCLEI
See also DEFORMED NUCLEI
EVEN-EVEN NUCLEI
HYPERNUCLEI
Excited States
Determination of modelless characteristics of nuclear excited states by method of the angular correlation functions for the exit particles and γ-quanta, 12:23937 (RA;SU;In Russian)

NUCLEIC ACIDS
See also DNA
OLIGONUCLEOTIDES
RNA
Labelling
Enzymatic synthesis of multiple-tritium-labelled nucleonic acid components from nitrous bases, 12:23170 (RA;XM;In Russian)

NUCLEON REACTIONS
See also NEUTRON REACTIONS
PROTON REACTIONS
Nuclear Reaction Kinetics
Distribution of secondary nucleons in kinetic energy in the quantum shock wave model, 12:24012 (RA;SU;In Russian)

NUCLEON-NUCLEON INTERACTIONS
Nucleon-Nucleon Potential
Studying the space structure of NN interaction, 12:24024 (R;SU)

NUCLEONS
See also NEUTRONS
PROTONS
Electromagnetic Form Factors
New approach in global description of experimental data, 12:23867 (RA;CS;In Slovak)
Pair Production
Perturbative QCD analysis of exclusive pair production of higher-generation nucleons, 12:23897 (J;US)
Structure Functions
Study of nuclear effects using structure functions of heavy nuclei nucleons, 12:23830 (RA;CS;In Czech)

NUCLEOSOMES
Crystallography
Nucleosome and chromatin biophysics, 12:23549 (RA;US)
Small Angle Scattering
Nucleosome and chromatin biophysics, 12:23549 (RA;US)

NUCLEOTIDES
See also ATP
GUANYLIC ACID
Labelling
Enzymic preparation of (γ-/sup 32/P)ATP, (α-/sup 32/P)dGTP and (α-/sup 32/P) GTP, 12:23538 (RA;ZA)
Purification
Enzymic preparation of (γ-/sup 32/P)ATP, (α-/sup 32/P)dGTP and (α-/sup 32/P) GTP, 12:23538 (RA;ZA)

NYLON
Chemical Radiation Effects
Grafting of acrylamide to nylon-6 by the electron beam preirradiation technique. V. Permeability and selectivity of the grafted membranes, 12:23150 (RA;IL)

O

OAK RIDGE NATIONAL LABORATORY

OHMIC PLASMA HEATING
See JOULE HEATING

OIL FIELDS
Data Base Management
Oil and Gas Field Code Master List (1986) and Oil and Gas Invalid Field Record List. Data file, 12:22180 (R;US)
Productivity
Human factors in the management of Becon Construction Company's Heavy Oil Test Station Project. Final report, 12:22188 (R;US)

OIL RESIDUES
See PETROLEUM RESIDUES

OIL SAND OILS
See BITUMENS

OIL SAND PROCESSING PLANTS
Design
Design and economic evaluation of an energy-integrated thermal process for recovery of oil from tar sands, 12:22220 (RA;US)
Economic Analysis
Design and economic evaluation of an energy-integrated thermal process for recovery of oil from tar sands, 12:22220 (RA;US)

OIL SANDS
Pyrolysis
Design and economic evaluation of an energy-integrated thermal process for recovery of oil from tar sands, 12:22220 (RA;US)
Preliminary mathematical model of the pyrolysis of bitumen-impregnated sandstone in a fluidized bed, 12:22221 (RA;US)

OIL SHALE PROCESSING PLANTS
Design
Indiana oil shale development project, 12:22218 (RA;US)

OIL SHALE WASTE WATER
See OIL SHALES
WASTE WATER

OIL SHALES
See also BLACK SHALES
Fischer Assay
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Hydrotorting Process
Beneficiation - hydroretorting research, 12:22216 (RA;US)
Perform research in progress development for hydroretorting of eastern oil shales, 12:22215 (RA;US)
In-Situ Retorting
Experimental program to determine the suitability of an in-situ process to recover hydrocarbons from eastern shale, 12:22217 (RA;US)
Modified In-Situ Processes
Postburn lithology and mineralogy at Rio Blanco Oil Shale Company's Tract C-a retort 1, Rio Blanco County, Colorado, 12:22214 (R;US)
Overburden
Postburn lithology and mineralogy at Rio Blanco Oil Shale Company's Tract C-a retort 1, Rio Blanco County, Colorado, 12:22214 (R;US)
Pyrolysis
General kinetic model of oil shale pyrolysis, 12:22223 (J;US)
Oil shale quarterly report, October-December 1986, 12:22222 (R;US)
Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Research Programs
Oil shale quarterly report, October-December 1986, 12:22222 (R;US)
Retorting
Radio frequency retorting and modeling, 12:22219 (RA;US)
Retorts
Postburn lithology and mineralogy at Rio Blanco Oil Shale Company's Tract C-a retort 1, Rio Blanco County, Colorado, 12:22214 (R;US)

ORGANIC FLUORINE COMPOUNDS
Abundance
Selective methylation of hydroaromatic C-H sites in coal: The importance of fluorene-like structural units in bituminous coals, 12:22151 (J;US)

ORGANIC MATTER
Only for unspecified materials containing chain and ring compounds of carbon; if specific organic compounds are studied, use descriptors for the compounds.
Decomposition
Effect of excluding shredders on leaf litter decomposition in two streams, 12:23524 (J;US)

ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also MELANIN
NITRO COMPOUNDS
NITROSO COMPOUNDS
PORPHYRINS
Labelling
Synthesis of tritiated indolyl butyric acid labelled in position 5, 12:23163 (RA;IL)
Raman Spectra
Triplet (T_1) state resonance Raman spectroscopy of some azanaphthalenes, 12:23113 (J;US)

ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
See also PHOSPHOLIPIDS
Biological Availability
Production of soluble, high molecular weight phosphorus and its subsequent uptake by stream detritus, 12:23496 (R;US)
Bond Angle
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)
Bond Lengths
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)
Crystal Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)
Molecular Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

ORGANIC POLYMERS
See also GRAFT POLYMERS
POLYESTERS
POLYETHYLENE GLYCOLS
RUBBERS
Natural Convection
Natural convection from horizontal wires to viscoelastic fluids, 12:23227 (J;US)

ORGANIC SOLVENTS
Biosynthesis
Bioconversion of algal biomass to neutral solvents, 12:22377 (BA;DE)
Comparative Evaluations
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
Role of temperature, solvent, and agitation in coal dissolution and liquefaction, 12:22100 (RA;US)
Diffusion
Structural mobility in coal dissolution, 12:22106 (RA;US)
Hydrogen Transfer
Hydrogenolysis in coal liquefaction and pyrolysis: The relative importance of solvent radicals and free hydrogen atoms, 12:22121 (RA;US)
Solvent-mediated hydrogenolysis in coal liquefaction: Quarterly report No. 4 for the period September 16, 1985 to July 15, 1986, 12:22130 (R;US)
Hydrogenation
Status of Lummus Crest Inc. research and development program on coal liquefaction co-processing, 12:22113 (RA;US)
Quality Control
Improving the quality of deteriorated recycle solvents: an ASPEN PLUS simulation of the integrated two-stage liquefaction process, 12:22098 (RA;US)
Recycling
Status of Lummus Crest Inc. research and development program on coal liquefaction co-processing, 12:22113 (RA;US)
Synthesis
Genetics of anaerobic organisms, 12:23562 (RA;US)

ORGANIC SULFUR COMPOUNDS
See also POLYCYCLIC SULFUR HETEROCYCLES
Chemical Preparation
Borane reduction of uracil derivatives, 12:23137 (J;US)

ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Bond Angle
Neutron diffraction analysis of $[H_3Pt_2(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Bond Lengths
Neutron diffraction analysis of $[H_3Pt_2(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Chemical Preparation
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)
Synthesis and reactions of hydrido(eta^1-allyl)- and hydrido(eta^3-allyl)iridium complexes, 12:23129 (J;US)
Chemical Reactions
A kinetic and thermodynamic study of the reversible C-H insertion/elimination of alkanes at iridium, 12:23108 (R;US)
Crystal Structure
Neutron diffraction analysis of $[H_3Pt_2(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Infrared Spectra
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Magnetic Susceptibility
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Moessbauer Effect
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Molecular Structure
Structural study of the Cu sites in metallothionein from neurospora crassa, 12:23118 (J;US)
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Fundamental studies in charge separation at interfaces in relation to water photolysis: Progress report, January 1, 1985-July 31, 1986, 12:23144 (R;US)
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

ORNL
Radioactive Waste Disposal
Subsurface disposal of liquid low-level radioactive wastes at Oak Ridge, Tennessee, 12:22317 (BA;US)
Test Facilities
Plasma-materials interactions test facility, 12:24261 (J;US)

OSCILLATIONS (PLASMA)
See PLASMA WAVES
OSMIUM
Emission Spectroscopy
Enhancement of osmium detection in inductively coupled plasma atomic emission spectrometry, 12:23084 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Quantitative Chemical Analysis
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 184
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 186
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 187
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 188
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 189
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 189 TARGET
Neutron Reactions
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)
Optical Models
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)
Triton Reactions
Gallagher-Moszkowski pairs in /sup 188/Re nucleus, 12:23999 (RA;CS;In Czech)
OSMIUM 190
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM 191
Excretion
Os-191 biodistribution studies in mice, 12:23638 (RA;IL)
Radiation Doses
Radiation dosimetry of the Os-191/Ir-191m generator eluate, 12:23583 (RA;IL)
Tissue Distribution
Os-191 biodistribution studies in mice, 12:23638 (RA;IL)
OSMIUM 192
Isotope Ratio
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
Mass Spectroscopy
Osmium isotopic ratio measurements by inductively coupled plasma source mass spectrometry, 12:23081 (J;US)
OSMIUM ALLOYS
Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)
Formation Heat
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)
OSMOSIS
Mathematical Models
Chemiosmotic model for plant mitochondria, 12:23556 (J;US)
OVARIES
Biological Radiation Effects
Effects of neonatal low dose gamma irradiation or high ambient temperature on the ovarian binding of radioiodinated HCG, 12:23637 (RA;IL)
OVERBURDEN
Lithology
Postburn lithology and mineralogy at Rio Blanco Oil Shale Company's Tract C-a retort 1, Rio Blanco County, Colorado (Core samples from near the in-situ retort), 12:22214 (R;US)
Mineralogy
Postburn lithology and mineralogy at Rio Blanco Oil Shale Company's Tract C-a retort 1, Rio Blanco County, Colorado (Core samples from near the in-situ retort), 12:22214 (R;US)
OVERHEAD POWER TRANSMISSION
Interference
A practical handbook for the location, prevention and correction of television interference from overhead power lines, 12:23715 (R;US)
OVULATION
Biological Radiation Effects
Altered ovarian responsiveness to gonadotropins in neonatally irradiated immature female rats, 12:23636 (RA;IL)
OXALATES
Precipitation
Development of partitioning method. Fundamental study on oxalate precipitation method, 12:22298 (R;JP;In Japanese)
OXIDASES
See OXIDOREDUCTASES
OXIDE MINERALS
See also SILICA
Crystal Structure
Incorporation of trace metals and radionuclides into goethite, 12:23052 (RA;AU)
OXIDOREDUCTASES
Code number 1.

Enzyme Activity
The effect of salinity on the allocation of carbon to energy-rich compounds in Euphorbia lathyris, 12:22355 (R;US)
OXOCARBOXYLIC ACIDS
See KETO ACIDS
OXYFLUORIDES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reactions
Low temperature preparation of actinide hexafluorides by O_2F_2 and KrF_2, 12:23181 (J;CH)
OXYGEN
Atomic Beam Sources
A sputtering derived atomic oxygen source for studying fast atom reactions, 12:23791 (R;US)
Atomic Beams
High intensity 5 eV CW laser sustained O-atom exposure facility for material degradation studies, 12:23815 (J;US)
Biological Effects
Inhibition of lung tumor development by hyperoxia and by oxidants, 12:23707 (RA;US)
Chemical Bonds
Use of nearly neat $^{16}O^{18}O$ in spectroscopic studies of oxyhemerythrin and oxyhemoglobin, 12:23554 (J;US)

Chemical Reactions
Kinetics of the graphite/oxygen reaction in the in-pore diffusion controlled regime. Pt. 2. Graphites V483T, ASR-1RS, ASR-1RG and ATR-2E, 12:22951 (R;DE;In German)
Removal
Integration of advanced coal preparation and liquefaction, 12:22118 (RA;US)

OXYGEN 16
Isotope Effects
Use of nearly neat $^{16}O^{18}O$ in spectroscopic studies of oxyhemerythrin and oxyhemoglobin, 12:23554 (J;US)
Shell Models
Thermal response of hot nuclei, 12:24045 (BA;US)
Temperature Effects
Thermal response of hot nuclei, 12:24045 (BA;US)

OXYGEN 16 REACTIONS
Alpha-Transfer Reactions
Coupled mass-asymmetry and relative motion coordinates for the collective alpha-particle transfer resonances, 12:23991 (R;XA)

OXYGEN 16 TARGET
Lithium 6 Reactions
Studies on the light heavy ion system /sup 6/Li+/sup 16/O, 12:23948 (R;DE;In German)
Neutron Reactions
Measurement of neutron differential scattering cross sections for ^{12}C, ^{14}N and ^{16}O in the energy range 20-26 Mev, 12:24052 (RA;FR)
Proton Reactions
Nucleon optical potential: an extended three-body problem or a restricted infinite-body problem, 12:23987 (R;US)

OXYGEN 18
De-Excitation
Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si, 12:23947 (R;DE)
Isotope Effects
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)
Use of nearly neat $^{16}O^{18}O$ in spectroscopic studies of oxyhemerythrin and oxyhemoglobin, 12:23554 (J;US)
Mass Spectroscopy
Method for determination of oxygen-18 of hydrogen peroxide in rainwater, 12:23082 (J;US)

OXYGEN 18 REACTIONS
Inclusive Interactions
Study of peripheral heavy ion reactions at 84 MeV/nucleon, 12:23960 (R;DE;In German)

OXYGEN 18 TARGET
Proton Reactions
Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si, 12:23947 (R;DE)

OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN

OXYGEN HYDRIDES
See WATER

OXYGEN IONS
Ion-Atom Collisions
Transfer ionization in 0.5-1.5 MeV/u O^{5-8+} + He collisions, 12:23795 (R;US)

OXYMETHYLENE
See FORMALDEHYDE

OZONE
Biological Effects
Inhibition of lung tumor development by hyperoxia and by oxidants, 12:23707 (RA;US)
Chemical Reactions
Metal arene complexes in coal structure determination: Quarterly report for the period December 1986-February 1987, 12:22148 (R;US)
Production

P

PACIFIC OCEAN
Sedimentary Basins
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)

PACKAGING
Evaluation
Evaluation and compilation of DOE waste package test data: Biannual report, December 1985-July 1986, 12:22303 (R;US)

PAH
See POLYCYCLIC AROMATIC HYDROCARBONS

PAKISTAN
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)

PAKS-1 REACTOR
Paks, Tolna, Hungary
Dosimetry
Radiation monitoring preparation and carrying out during start-up of the 1st unit of Paks NPP, 12:22544 (RA;XM;In Russian)

PALEOCENE EPOCH
See TERTIARY PERIOD

PALEOGENE PERIOD
See TERTIARY PERIOD

PALLADIUM
Auger Electron Spectroscopy
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Electron Diffraction
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Electronic Structure
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Magnetic Properties
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)
Photoelectron Spectroscopy
Iron on palladium (111) studied with photoemission, low-energy electron diffraction, and Auger-electron spectroscopy, 12:22883 (J;US)

PALLADIUM 108 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)

PALLADIUM 110 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)

PALLADIUM ALLOYS
See also PALLADIUM BASE ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)

PALLADIUM BASE ALLOYS
Electric Conductivity
Coherence in $CePd_3$, 12:22856 (R;US)
Magnetic Susceptibility
Coherence in $CePd_3$, 12:22856 (R;US)
Wear
Correlations between electrical contact resistance and stages of wear in 700 Torr helium for precious metal electrical contacts, 12:22866 (R;US)
PALLADIUM COMPLEXES
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
PALLADIUM COMPOUNDS
Catalytic Effects
Catalysts via hydrous metal oxide ion exchangers, 12:22101 (RA;US)
PALO DURO BASIN
Radioactive Waste Facilities
Technical basis for high-level waste repository land control requirements for Palo Duro Basin, Paradox Basin, and Richton Dome, 12:22254 (R;US)
PAPER INDUSTRY
Measuring Instruments
Proceedings of the DOE/Industry Research and Development Sensor Working Group meeting, Chicago, Illinois: [Final report], 12:22787 (R;US)
Meetings
Proceedings of the DOE/Industry Research and Development Sensor Working Group meeting, Chicago, Illinois: [Final report], 12:22787 (R;US)
Monitors
Proceedings of the DOE/Industry Research and Development Sensor Working Group meeting, Chicago, Illinois: [Final report], 12:22787 (R;US)
Process Control
Proceedings of the DOE/Industry Research and Development Sensor Working Group meeting, Chicago, Illinois: [Final report], 12:22787 (R;US)
PARADOX BASIN
Radioactive Waste Facilities
Technical basis for high-level waste repository land control requirements for Palo Duro Basin, Paradox Basin, and Richton Dome, 12:22254 (R;US)
PARALLEL PROCESSING
High parallelism and an effective reasoning procedure, 12:24345 (R;NO)
Algorithms
Parallel processing of networks. Final technical report, 12:24326 (R;US)
Finite Element Method
Development and performance evaluation of a finite element simulator using parallel processing array (PPA), 12:24372 (TJ;US)
Mathematical Logic
Experiments with OR-parallel logic programs, 12:24328 (R;US)
PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE
PARAMETRIC INSTABILITIES
Coherent Scattering
Double stimulated scattering and the development of the theory of parametric instabilities in plasmas, 12:24232 (RA;FR)
PARTIAL DIFFERENTIAL EQUATIONS

Old physics, new physics and colliders, 12:23920 (R;US)
PARTICLE PRODUCTION
See also MULTIPLE PRODUCTION
Angular Distribution
Effect of the $\Delta N=2$ interaction on direct one-nucleon transfer reactions, 12:24002 (RA;CS;In Czech)
PARTICLE SIZE
Measuring Methods
Evaluation of the laser Doppler velocimeter for particle sizing: Topical report, 12:23386 (R;US)
PARTICLE TRACKS
Energy Absorption
Dose mean lineal energy for computer simulated proton tracks, 12:24053 (RA;FR)
Image Processing
Fully automated analysis of proton etched tracks in CR-39 plastic application in neutron spectroscopy and 10 μSv dosimetry, 12:23307 (RA;FR)
Ionization
Production by medium energy alpha-particles of strong ionizing events in composite tissue like media, 12:23330 (RA;FR)
PARTICLE-CORE COUPLING MODEL
Two-Body Problem
Study of two-body effects in the particle-rotor model, 12:24041 (R;NO)
PARTICLE-CORE MODEL
See PARTICLE-CORE COUPLING MODEL
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Air Pollution
Deposition of respirable coal dust in an airway. Report of Investigations/1986, 12:22159 (R;US)
Gray-iron foundry industry particulate emissions: source category report. Final report, June 1983-August 1986, 12:23442 (R;US)
User's guide for PEM-2: Pollution Episodic Model (version 2). Final report, 12:23433 (R;US)
Optical Microscopy
Particle and fiber identification by optical microscopy: Final report, 12:23385 (R;US)
Particle Size
Evaluation of the laser Doppler velocimeter for particle sizing: Topical report, 12:23386 (R;US)
Removal
Fossil and nonfossil fuel-fired industrial boilers - background information for promulgated PM (particulate matter) and NOx (nitrogen oxide) standards. Volume 3. Final environmental impact statement, 12:23248 (R;US)
Velocity
Evaluation of the laser Doppler velocimeter for particle sizing: Topical report, 12:23386 (R;US)
PASCO BASIN
Basalt
Form and composition of secondary mineralization in fractures in Columbia River basalts, 12:23723 (R;US)
PASSIVE SOLAR HEATING SYSTEMS
Temperature Monitoring
New Mexico passive solar home temperature survey: Final report, 12:22385 (R;US)
PATTERN RECOGNITION
Patterns from models of dissipative systems, 12:24354 (R;US)
PBFA
See PARTICLE BEAM FUSION ACCELERATOR
PBX DEVICES
PBX is essentially the old PDX with a rearrangement of the divertor coils. The resultant plasma is "beam-shaped" with a goal of 10 percent beta. MHD properties will be studied.

Status of Lummus Crest Inc. research and development program on coal liquefaction co-processing, 12:22113 (RA;US)

PETULA TOKAMAK
Antennas
Modular multijunction grill for current drive studies at 3.7 GHz for Petula-B and TORE SUPRA, 12:24286 (RA;FR)
Current-Drive Heating
Experiments on lower hybrid current drive and heating on Petula B, 12:24205 (RA;FR)
Lower hybrid current drive efficiency of the Petula-B tokamak at f = 1.3 GHz and at f = 3.7 GHz, 12:24238 (RA;FR)
Lower Hybrid Heating
Experiments on lower hybrid current drive and heating on Petula B, 12:24205 (RA;FR)
Lower hybrid current drive efficiency of the Petula-B tokamak at f = 1.3 GHz and at f = 3.7 GHz, 12:24238 (RA;FR)

PHAGOCYTOSIS
Self vs. non-self distinction in digestive vacuoles of the Amoeba dictyostelium discoideum, 12:23616 (RA;ZA)

PHANTOMS
Depth Dose Distributions
Depth dose optimization for neutron capture therapy, 12:23577 (RA;FR)
Neutron depth dose calculations and measurements in an elliptical phantom for radiation protection purposes, 12:24080 (RA;FR)
Studies of dose as a function of depth in water-filled phantoms exposed around the CERN accelerators, 12:24079 (RA;FR)
Radiation Dose Distributions
Development and use of a tissue equivalent proportional counter analysis system to measure the dose delivered to the gut of an anthropomorphic phantom from a fission source, 12:23295 (RA;FR)
Time dependence of the fluence rate of thermal neutrons in a human phantom after irradiation with 15 MeV by the pulsed source method, 12:23349 (RA;FR)

PHASE DIAGRAMS
Calculation Methods
Alloy phase stability, 12:24114 (R;US)

PHENANTHROLINES
Infrared Spectra
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Magnetic Susceptibility
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)
Moessbauer Effect
Dynamic intersystem crossing in solid bis(phenanthroline)bis(cyanotrihydroborato)iron(II), 12:23133 (J;US)

PHENOL
Decomposition
Evaluation of ultraviolet light/oxidizing agent as a means for the degradation of toxic organic chemicals in aqueous solutions, 12:23143 (R;US)
Recovery
Coal gasification via the Lurgi process: Topical report: Volume 2, Production of IFG [industrial fuel gas], 12:22124 (R;US)

PHENOLS
See also CRESOLS
PHENOL
Deuteration
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
Mass Spectra
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)

PHENYLALANINE
Clearance
Phenylalanine clearance rate in mice: studies on dilute-opisthotonic and other mutants, 12:23703 (RA;US)
Metabolism
Phenylalanine clearance rate in mice: studies on dilute-opisthotonic and other mutants, 12:23703 (RA;US)

PHILIPPINES
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)

PHILIPPSBURG-1 REACTOR
Containment Systems
Failure pressure and failure mode of the latest type of German PWR containments, 12:22593 (RA;US)
Reactor Safety
Failure pressure and failure mode of the latest type of German PWR containments, 12:22593 (RA;US)
PHILIPPSBURG-2 REACTOR
Containment Systems
Failure pressure and failure mode of the latest type of German PWR containments, 12:22593 (RA;US)
Reactor Safety
Failure pressure and failure mode of the latest type of German PWR containments, 12:22593 (RA;US)
PHORBOL ESTERS
Biological Effects
Studies on renal transport systems in a line of cultured kidney cells, LLC-PK_1, 12:23690 (RA;US)
PHOSPHATES
For salts only; see also PHOSPHORIC ACID ESTERS.
See also THALLIUM PHOSPHATES
Uptake
Microbial activity and phosphorus uptake on decomposing leaf detritus in a heterotrophic stream, 12:23497 (R;US)
PHOSPHATIDES
See PHOSPHOLIPIDS
PHOSPHOLIPIDS
Labelling
Sixth Czechoslovak biophysical congress with international participation. Abstracts of papers, 12:23640 (R;CS)
PHOSPHORIC ACID
Purification
Purification of wet process phosphoric acid by solvent extraction with long-chain aliphatic amines , 12:22237 (R;SE)
Solvent Extraction
Purification of wet process phosphoric acid by solvent extraction with long-chain aliphatic amines , 12:22237 (R;SE)
PHOSPHORUS
Activation Analysis
Instrumental neutron activation analysis of phosphorus in biological materials by Bremsstrahlung measurement, 12:22988 (R;CH)
PIXE Analysis
Analysis by PIXE and PIGME of biomineralized tissues in the chiton Clavarizona hirtosa, 12:23042 (RA;AU)
PHOSPHORUS 32
Radiochemistry
Enzymic preparation of (γ-/sup 32/P)ATP, (α-/sup 32/P)dGTP and (α-/sup 32/P) GTP, 12:23538 (RA;ZA)
PHOSPHORYLASES
See PHOSPHOTRANSFERASES
PHOSPHOTRANSFERASES
(Code numbers 2.7.1 to 2.7.6 and 2.7.8 to 2.7.9)
Biological Functions
Protein chemistry and enzyme mechanisms, 12:23544 (RA;US)
Clearance
Studies on renal transport systems in a line of cultured kidney cells, LLC-PK_1, 12:23690 (RA;US)
Enzyme Activity
Factors affecting polyphosphate kinase activity in Acinetobacter calcoaceticus var lwoffi isolated from a five-stage activated sludge plant, 12:22354 (RA;ZA)
Membrane Transport
Studies on renal transport systems in a line of cultured kidney cells, LLC-PK_1, 12:23690 (RA;US)
Molecular Structure
Protein chemistry and enzyme mechanisms, 12:23544 (RA;US)
Phosphates
Factors affecting polyphosphate kinase activity in Acinetobacter calcoaceticus var lwoffi isolated from a five-stage activated sludge plant, 12:22354 (RA;ZA)
PHOTODETECTORS
Physical Radiation Effects
Radiation threshold levels for noise degradation of photodiodes. Technical report, 12:23383 (R;US)
PHOTODIODES
Physical Radiation Effects
Radiation threshold levels for noise degradation of photodiodes. Technical report, 12:23383 (R;US)
PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS
PHOTOGRAPHIC FILM DETECTORS
Foils of AgCl(Cd) as charged particle track detectors, 12:23362 (RA;CS;In Czech)
PHOTOGRAPHIC FILM DOSEMETERS
Energy Dependence
Energy dependence of ionizing radiation in AGFA-GEVAERT dosimetric film, 12:23351 (R;BR;In Portuguese)
PHOTOIONIZATION
Dynamics
Dynamics of cluster dissociation following multiphoton ionization, 12:23788 (R;US)
PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS
PHOTOMULTIPLIERS
Maintenance
Removal of phototubes from Pb—glass detectors, 12:23378 (J;US)
PHOTON ACTIVATION ANALYSIS
See ACTIVATION ANALYSIS
PHOTONS
PHOTON DETECTION (GAMMA)
See GAMMA DETECTION
PHOTONEUTRONS
Polarization
Time of flight system for polarization measurement of photoneutrons from the /sup 2/H(γ,n) reaction, 12:23940 (RA;IL)
PHOTON-PROTON INTERACTIONS
Inelastic Scattering
Inelastic photoproduction of charged vector bosons, 12:23899 (J;US)
PHOTONS
Resonance Scattering
Orientation of nitrate molecules in graphite-HNO/sub 3/ residue compounds, 12:22993 (RA;IL)
Study of the orientation of adsorbed N/sub 2/O molecules using nuclear resonance fluorescence, 12:22992 (RA;IL)
PHOTONUCLEAR REACTIONS
Differential Cross Sections
Inelastic scattering of photons on deuterons and neutron polarizability, 12:24003 (RA;SU;In Russian)
Multipole Transitions
Microscopic description of electromagnetic transitions and photonuclear reactions, 12:23995 (R;DE;In German)
PHOTOVOLTAIC POWER PLANTS
Design
Central station photovoltaic array-field designs and design practices, 12:22383 (R;US)
PHOTOVOLTAIC POWER SUPPLIES
Education
Establishment of a photovoltaic laboratory at the University of Lowell: Technical progress report, 12:22380 (R;US)
Reliability
Reliability of intermediate sized photovoltaic systems, 12:22381 (R;US)
Technology Assessment
Photovoltaic system technology, 12:22382 (R;US)
PHYCOCYANIN
Nuclear Magnetic Resonance
Chromopeptides from phycoerythrocyanin. Structure and linkage of the three bilin groups (Mastigocladus laminosus;Anabaena variabilis), 12:23552 (J;US)
Protein Structure
Chromopeptides from phycoerythrocyanin. Structure and linkage of the three bilin groups (Mastigocladus laminosus;Anabaena variabilis), 12:23552 (J;US)
PHYSICAL METALLURGY
Research Programs
Chemistry and Materials Science: Quarterly research report: Weapons supporting research, departmental institutional

research and development, September-December 1986, 12:24315 (R;US)

PHYSICS
See also HIGH ENERGY PHYSICS
NUCLEAR PHYSICS
Experimental and theoretical physics. Collection, 12:23743 (R;SU;In Russian)

PICEANCE CREEK BASIN
Geologic Structures
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)

PIGE ANALYSIS
See NUCLEAR REACTION ANALYSIS
PROTON REACTIONS

PIGMENT CELLS
See ANIMAL CELLS

PINES
Translocation
Explorations of mechanisms regulating ectomycorrhizal colonization of boron-fertilized pine: Quarterly report, 8/20/86-3/31/87, 12:22364 (R;US)

PION MINUS REACTIONS
Inelastic Scattering
Inelastic pion scattering by ^{13}C at low energies, 12:23952 (R;US)

PION MINUS-PROTON INTERACTIONS
Charge-Exchange Interactions
Study of D(1285) -> K/sup +/K/sup -/π/sup 0/ decay and D(1285)- and E(1420)-mesons production in exclusive reactions, induced by π/sup -/- and K/sup -/-mesons at 32.5 GeV/c, 12:23828 (R;SU)
Exclusive Interactions
Study of D(1285) -> K/sup +/K/sup -/π/sup 0/ decay and D(1285)- and E(1420)-mesons production in exclusive reactions, induced by π/sup -/- and K/sup -/-mesons at 32.5 GeV/c, 12:23828 (R;SU)
Particle Production
Experimental search for narrow resonances in the reaction $\pi^- p \rightarrow \gamma\gamma n$ at 13 GeV/c, 12:23848 (J;NL)
Inclusive Δ/sup ++/ production in π/sup -/p interactions at 5 GeV/c, 12:23833 (RA;CS;In Slovak)
Production of glueballs, 12:23908 (J;GB)

PION PLUS REACTIONS
Inelastic Scattering
Inelastic pion scattering by ^{13}C at low energies, 12:23952 (R;US)
Measurement of total inelastic cross sections of proton and π/sup +/-meson interaction with nuclei in the momentum range from 1.35 to 3.75 GeV/c, 12:23938 (R;SU;In Russian)
Total Cross Sections
Measurement of total inelastic cross sections of proton and π/sup +/-meson interaction with nuclei in the momentum range from 1.35 to 3.75 GeV/c, 12:23938 (R;SU;In Russian)

PION REACTIONS
See also PION MINUS REACTIONS
PION PLUS REACTIONS
Pair Production
Quark-cluster-model predictions for the nuclear Drell-Yan process, 12:24043 (J;US)

PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Electromagnetic Form Factors
Results of an analysis of Soviet-American experiments on the pion charge radius confirmed at CERN, 12:23866 (RA;CS;In Slovak)
Particle Production
Properties of pC-interactions at Psub(p)=10 GeV/c with the emission of cumulative pions and protons, 12:23835 (R;SU;In Russian)
Particle Radii
Results of an analysis of Soviet-American experiments on the pion charge radius confirmed at CERN, 12:23866 (RA;CS;In Slovak)

PIONS MINUS
Particle Production
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)

PIONS NEUTRAL
Particle Decay
Decay π/sup 0/ -> e/sup +/e/sup -/ and two-photon processes, 12:23892 (R;AT)
Particle Production
Threshold pion production in nucleon-nucleon collisions and extramass behaviour of the s wave πN amplitude, 12:23879 (RA;SU;In Russian)
Spectrometers
A π^0 spectrometer for low-energy heavy-ion reactions, 12:23286 (R;US)

PIONS PLUS
Particle Production
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)
Threshold pion production in nucleon-nucleon collisions and extramass behaviour of the s wave πN amplitude, 12:23879 (RA;SU;In Russian)

PISUM
Nitrogen Fixation
Symbiotic nitrogen fixation and nitrate uptake by the pea crop, 12:23625 (R;DK)

PIXE ANALYSIS
Prior to October 1980, this concept was indexed to X-RAY EMISSION ANALYSIS.
Advantages of combining ion beam techniques for surface layer analysis, 12:23065 (RA;AU)
New PIXE/PIGME analysis facility, 12:23353 (RA;AU)
X-ray reflection analysis techniques using PIXE facilities, 12:23037 (RA;AU)

PLANCK RADIATION FORMULA
M Codes
Using MACSYMA to drive numerical methods to computer radiation integrals, 12:22485 (J;US)

PLANT BREEDING
In Vitro
In vitro technology for mutation breeding. Reports of the first and second research co-ordination meetings held in Vienna, 31 October-4 November 1983 and 22-28 August 1985, 12:23620 (R;XA)
Mutations
In vitro technology for mutation breeding. Reports of the first and second research co-ordination meetings held in Vienna, 31 October-4 November 1983 and 22-28 August 1985, 12:23620 (R;XA)

PLANT GROWTH
Feasibility Studies
Feasibility of mariculture of the brown seaweed, Sargassum muticum (Phaeophyta): Growth and culture conditions, alginic acid content and conversion to methane, 12:22373 (BA;DE)

PLANTS
See also ALGAE
FUNGI
GRASS
SEAWEEDS
SOLANUM
TRADESCANTIA
Contamination
Contribution to the topic 'environmental radioactivity', 12:23650 (R;AT;In German)
Inventories
Technical report of biota, FEL Site 2, Lawrence Livermore National Laboratory: Final report, 12:23494 (R;US)
Radiation Injuries
Ultraviolet-B-effects on plants: Spectra of harmful effects, primary damage and UV protective mechanisms. Final report, 12:23634 (R;DE;In German)

PLANTS (INDUSTRIAL)
See INDUSTRIAL PLANTS

PLANTS (POWER)
See POWER PLANTS

PLASMA
See also COLD PLASMA
COLLISIONAL PLASMA
COLLISIONLESS PLASMA
HIGH-BETA PLASMA
HOMOGENEOUS PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
SOLID-STATE PLASMA

Alfven Waves
Destabilization of Alfven-resonant modes by resistivity and diamagnetic drifts, 12:24267 (J;US)

Antennas
Computational study of ion cyclotron frequency stabilization of the m = 1 interchange mode in mirror geometry, 12:24270 (J;US)

Charged-Particle Transport
Plasma energy deposition from the nuclear elastic scattering of tritons on tritons, 12:24063 (J;US)

Collisions
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)

Computerized Simulation
Plasma physics via computer simulation, 12:24278 (B;US)

Current-Drive Heating
F-θ pumping with partial relaxation, 12:24263 (J;US)

Educational Facilities
Magnetic Fusion Energy Technology Fellowship Program: Summary of program activities for calendar year 1985, 12:24191 (R;US)

Electric Conductivity
F-θ pumping with partial relaxation, 12:24263 (J;US)

Electric Fields
Electrostatic Kelvin—Helmholtz instability produced by a localized electric field perpendicular to an external magnetic field, 12:24272 (J;US)

Electron Beam Injection
Injection of an electron beam into a plasma and spacecraft charging, 12:23786 (J;US)
Propagation of a nonrelativistic electron beam in a plasma in a magnetic field, 12:24264 (J;US)

Energy Absorption
Kinetic full wave theory of strong spatial damping of electron cyclotron waves in nearly parallel stratified plasmas, 12:24273 (J;US)

Energy Transfer
Model for thermal transport in tokamaks, 12:24275 (J;US)

Flute Instability
Computational study of ion cyclotron frequency stabilization of the m = 1 interchange mode in mirror geometry, 12:24270 (J;US)

Helmholtz Instability
Electrostatic Kelvin—Helmholtz instability produced by a localized electric field perpendicular to an external magnetic field, 12:24272 (J;US)

Instability
Laser filamentation in a thermally unstable plasma, 12:24274 (J;US)

Kink Instability
Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas, 12:24269 (J;US)

Light Transmission
Laser filamentation in a thermally unstable plasma, 12:24274 (J;US)

Magnetohydrodynamics
Magnetohydrodynamic stability of plasmas with aligned mass flow, 12:24262 (J;US)

Mass Transfer
Magnetohydrodynamic stability of plasmas with aligned mass flow, 12:24262 (J;US)

Meetings
Proceedings of the 1984 international conference on plasma physics, 12:24220 (R;FR)
Proceedings of the 1984 International Conference on plasma physics, 12:24214 (R;FR)

Physics
Plasma physics via computer simulation, 12:24278 (B;US)

Plasma Instability
Model for thermal transport in tokamaks, 12:24275 (J;US)

Plasma Simulation
Computational study of ion cyclotron frequency stabilization of the m = 1 interchange mode in mirror geometry, 12:24270 (J;US)

Randomness
Behavior of orbits of two coupled oscillators, 12:24229 (RA;FR)
Intrinsic stochasticity, 12:24228 (RA;FR)

Recombination
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)

Reviews
Experimental and theoretical physics. Collection, 12:24248 (R;SU;In Russian)

Rotation
Rotating magnetic field technique of driving current and its application in the Rotamak, 12:24216 (RA;FR)

Stability
Magnetohydrodynamic stability of plasmas with aligned mass flow, 12:24262 (J;US)

Stratification
Kinetic full wave theory of strong spatial damping of electron cyclotron waves in nearly parallel stratified plasmas, 12:24273 (J;US)

Training
Fusion Energy Postdoctoral Research Program and Professional Development Program: FY 1986 annual report, 12:24193 (R;US)
Magnetic Fusion Science Fellowship program: Summary of program activities for calendar year 1986, 12:24192 (R;US)

Trapping
Wave particle interactions and plasma turbulence theory, 12:24231 (RA;FR)

Turbulence
Renormalized theory of nonlinear fluctuations and plasma turbulence, 12:24234 (RA;FR)
Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas, 12:24269 (J;US)
Wave particle interactions and plasma turbulence theory, 12:24231 (RA;FR)

Vortex Flow
Electrostatic Kelvin—Helmholtz instability produced by a localized electric field perpendicular to an external magnetic field, 12:24272 (J;US)

Wave Propagation
Slide-away regime in space and laboratory plasmas, 12:23747 (RA;FR)

PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT

Beam Injection Heating
Confinement regimes in ohmically and auxiliary heated tokamaks, 12:24198 (RA;FR)

Joule Heating
Confinement regimes in ohmically and auxiliary heated tokamaks, 12:24198 (RA;FR)

Tandem Mirrors
Physics issues in mirror and tandem mirror systems, 12:24211 (RA;FR)

PLASMA DIAGNOSTICS

Alpha Particles
Active diagnostics of magnetically confined alpha particles by pellet injection, 12:24251 (R;JP)

Bolometers
Reconstruction of plasma radiation features from projections measured with two bolometer arrays, 12:24265 (J;US)

Electron Probes
Simple system for mapping magnetic field errors in tori, 12:24266 (J;US)

Magnetic Probes
Simple system for mapping magnetic field errors in tori, 12:24266 (J;US)

Microwave Amplifiers
Gyrotrons and plasma investigations, 12:24226 (RA;FR)

Microwave Radiation
Enhanced microwave scattering and its application for plasma diagnostics, 12:24219 (RA;FR)

Nonlinear Optics
Two novel plasma diagnostic tools: fiber sensors and phase conjugation, 12:24218 (RA;FR)
Optical Fibers
Two novel plasma diagnostic tools: fiber sensors and phase conjugation, 12:24218 (RA;FR)
Pellet Injection
Active diagnostics of magnetically confined alpha particles by pellet injection, 12:24251 (R;JP)

PLASMA DISRUPTION
Magnetic Surfaces
Nature of disruptions, 12:24199 (RA;FR)

PLASMA DRIFT
Turbulence
Short-wave ion-acoustic turbulence and anomalous transport in a plasma, 12:24247 (RA;SU;In Russian)

PLASMA FILAMENT
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)

PLASMA FURNACES
Uses
Decomposition of hazardous organic materials by RF-activated gas plasma: Topical report, 12:23191 (R;US)

PLASMA JETS
Travelling Waves
To the nonlinear theory of travelling electromagnetic waves in a moving plasma, 12:24250 (RA;SU;In Russian)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA SHEET
Ion Beams
Velocity distributions of ion beams in the plasma-sheet boundary layer. Progress report, 12:23779 (R;US)

PLASMA SIMULATION
Recent advances in the theory and modeling of rf heating in inhomogeneous plasmas, 12:24243 (R;US)
Magnetic Surfaces
Resistive MHD modes and relaxation in Tokamak plasmas, 12:24203 (RA;FR)

PLASMA WAVES
Acceleration
Beat Wave and Surfatron Accelerator of particles, 12:24230 (RA;FR)
Coupling
Recent advances in the theory and modeling of rf heating in inhomogeneous plasmas, 12:24243 (R;US)
Reviews
Waves in plasmas: some historical highlights, 12:24227 (RA;FR)

PLATES (FUEL)
See FUEL PLATES

PLATINUM
Adsorption
High coverage states of oxygen adsorbed on Pt(100) and Pt(111) surfaces, 12:22920 (J;NL)
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission II, 12:24129 (J;NL)
Mutagen Screening
Specific-locus experiments and related studies with four chemicals, 12:23699 (RA;US)
Reduction
Mechanistic features of gamma radiation-induced formation of Pt hydrosols, 12:23151 (RA;IL)

PLATINUM 196 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)

PLATINUM ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Electronic Specific Heat
Pressure dependence of the specific heat of heavy-fermion compounds ($CeAl_3$; $CeCu_6$; UBe_{13}; UPt_3), 12:22855 (R;US)
Electronic Structure
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Formation Heat
Linear augmented-Slater-type-orbital method for electronic-structure calculations. IV. 5d-5d alloys, 12:22885 (J;US)

PLATINUM COMPLEXES
Bond Angle
Neutron diffraction analysis of $[H_3Pt_3(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Bond Lengths
Neutron diffraction analysis of $[H_3Pt_3(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)
Crystal Structure
Neutron diffraction analysis of $[H_3Pt_3(Ph_2PCh_2CH_2PPh_2)_2]^+[BPh_4]$: an unusual example of an unsymmetrical $[P_2Pt(\mu\text{-}H)_2PtP_2H]$ core, 12:23135 (J;US)

PLESIOTHERAPY
See RADIOTHERAPY

PLUMES
Diffusion
FEM3 dispersion calculations: Evaluation of turbulence submodel, 12:23419 (R;US)
Mathematical Models
Stochastic prediction of dispersive-contaminant transport. Final report, 1 September 1983-30 April 1986, 12:23441 (R;US)

PLUTONIUM
Accounting
Quantitative estimate of holdup in a plutonium processing facility, 12:22343 (J;US)
Calibration Standards
1984 EC enquiry into the needs for nuclear reference materials (Z>89), 12:22998 (RA;XA)
Advances in chemical standards for nuclear fuel analysis and safeguards purposes. Report of a consultants' meeting on nuclear reference materials, needs and availability held in Antwerp, Belgium, 8-11 October 1985, 12:22997 (R;XA)
Casting
Thermal conductivity effects and process variables study: Final report covering the period 15 July to 15 October 1986, 12:22868 (R;US)
Chemical Reactions
Reaction of PuH/sub x/ and Pu+PuH/sub x/ mixtures with air, 12:23182 (J;CH)
Distribution
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Solvent Extraction
Porous sorbents and membrane supported specific actinide chelators and solvent extractants, 12:23104 (RA;CS)
Titration
Determination of uranium and plutonium, 12:23008 (RA;CS;In Czech)
Valence
Identification of oxidation state of plutonium in the snow layers, High Tatras, Czechoslovakia, 12:23486 (RA;CS)

PLUTONIUM 239
Internal Pair Production
Internal pair production in nuclear alpha decay, 12:23982 (RA;CS;In Slovak)

PLUTONIUM 244
Isotope Production
Preparation of additional supplies of /sup 244/Pu, 12:23169 (RA;XA)

PLUTONIUM ALLOYS
Amorphous State
Formation of amorphous plutonium alloys or metastable structures in Pu-Fe, Pu-Ta, Pu-Si alloys, 12:22889 (J;CH)

Phase Transformations
Crystallographic considerations of the δ in equilibrium α displacive transformation in plutonium alloys, 12:22872 (R;US)
Lattice correspondence of the δ->α displacive transformation in plutonium alloys, 12:22890 (J;CH)

PLUTONIUM COMPLEXES
Study of influence of uranium (6) on complexation of plutonium (4) in radiolytically degraded Purex system, 12:22245 (R;PL;In Polish)

PLUTONIUM FLUORIDES
Chemical Reactions
Low temperature preparation of actinide hexafluorides by O_2F_2 and KrF_2, 12:23181 (J;CH)
Ionization Potential
Thermochemical studies on the plutonium fluorides and protactinium oxides, 12:23179 (J;CH)
Thermodynamic Properties
Thermochemical studies on the plutonium fluorides and protactinium oxides, 12:23179 (J;CH)

PLUTONIUM HYDRIDES
Chemical Reactions
Reaction of PuH/sub x/ and Pu+PuH/sub x/ mixtures with air, 12:23182 (J;CH)

PMMA
Crystallization
Scattering studies on mixtures of poly(ethylene oxide) with poly(methyl methacrylate), 12:22938 (R;US)

P-N JUNCTIONS
Damaging Neutron Fluence
Anomalies of Si Pn-junctions after fast neutron irradiation, 12:22949 (RA;CS;In Slovak)
Mathematical Models
Extended steady-state analysis of the gamma-irradiated Cartesian P-N junction, 12:23384 (R;US)
Physical Radiation Effects
Extended steady-state analysis of the gamma-irradiated Cartesian P-N junction, 12:23384 (R;US)

PNA
See POLYCYCLIC AROMATIC HYDROCARBONS

POINT CONTACTS
See ELECTRIC CONTACTS

POISONS (CHEMICAL)
See HAZARDOUS MATERIALS

POLAND
Radioactivity
Influence of industry on pollution of the environment and human population with natural radionuclides and heavy metals, 12:23483 (R;PL)

POLAR REGIONS
Charged-Particle Precipitation
Characteristics of polar-cap precipitation and their dependence on the interplanetary magnetic field and the solar wind, 12:23780 (R;US)
Electron Precipitation
Characteristics of polar-cap precipitation and their dependence on the interplanetary magnetic field and the solar wind, 12:23780 (R;US)

POLAR-CAP AURORAE
Images
Modeling substorm current sytems using conductivity distributions inferred from DE (Dynamics Explorer) auroral images, 12:23776 (R;US)

POLARIMETERS
Design
Construction, optimization, and test of a polarimeter for the measurement of the neutron-proton polarization-transfer coefficient D/sub t/, 12:23352 (R;DE;In German)
Plastic Scintillation Detectors
Preparation of carbon polarimeter for fast neutrons, 12:23356 (RA;CS;In Czech)
Testing
Construction, optimization, and test of a polarimeter for the measurement of the neutron-proton polarization-transfer coefficient D/sub t/, 12:23352 (R;DE;In German)

POLARIZED PRODUCTS
Use only for indexing the products of nuclear reactions or particle interactions.
Energy Dependence
Analysis of energy dependence of polarization factors in the framework of R-matrix theory, 12:23942 (RA;CS;In Czech)

POLICY
See ENERGY POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Toxic Materials
Computerization of the Preliminary Pollutant Limit-Value concept. Final report, 12:22661 (R;US)

POLLUTION
See also AIR POLLUTION
LAND POLLUTION
THERMAL POLLUTION
WATER POLLUTION
Activation Analysis
Instrumental neutron activation analysis of site-dependent uptake and distribution of trace elements in the saltmarsh plant Aster tripolium from marsh fields in the Schelde estuary, Netherlands, 12:23073 (R;DE;In German)

POLLUTION CONTROL EQUIPMENT
See also AIR FILTERS
BAGHOUSES
ELECTROSTATIC PRECIPITATORS
C Codes
User's guide for PARTIC II (Version II): A computer code for analyzing the performance of particulate-control devices, 12:22153 (R;US)
Design
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)
Violations
Motor vehicle tampering survey - 1985. Final report, 12:22809 (R;US)

POLLUTION REGULATIONS
Regulations for nonradioactive pollution only; see also CONTAMINATION REGULATIONS.
Economic Impact
Economic impact of proposed water quality and effluent standard amendments for water in the Sangamon River basin, 12:23534 (R;US)

POLLUTION SOURCES
See also MOBILE POLLUTANT SOURCES
Acid Rain
Comprehensive experimental design plan to relate pollutant sources to acidic deposition. Final report, 12:23439 (R;US)
Gas Analysis
Stability of parts-per-million organic cylinder gases and results of source test analysis audits: Status Report 8, 12:23440 (R;US)

POLLUTION (THERMAL)
See THERMAL POLLUTION

POLONIUM 210
Internal Pair Production
Internal pair production in nuclear alpha decay, 12:23982 (RA;CS;In Slovak)

POLYACRYLONITRILE
See ORGANIC POLYMERS

POLYATOMIC MOLECULES
Oscillation Modes
Between the local-mode and normal-mode limits, 12:23817 (J;NL)
Potential Energy
Adjusted valence force field (AVFF) for polyatomic molecules, 12:22979 (J;GB)

POLYCARBONATES
Chemical Radiation Effects
Dependence of the predicted outdoor lifetime of bisphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)

Foils
Dependence of the predicted outdoor lifetime of bisphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)
Physical Radiation Effects
Dependence of the predicted outdoor lifetime of bisphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)
Radiolysis
Dependence of the predicted outdoor lifetime of bisphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)
Service Life
Dependence of the predicted outdoor lifetime of bisphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)
Sheets
Dependence of the predicted outdoor lifetime of bisphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)

POLYCYCLIC AROMATIC HYDROCARBONS
See also 3-METHYLCHOLANTHRENE
Quantitative Chemical Analysis
Direct determination of polycyclic aromatic hydrocarbons in extracts of particulate matter, 12:23080 (J;US)

POLYCYCLIC SULFUR HETEROCYCLES
Emission Spectra
Conformational equilibria in trans-1,2-diarylethylenes manifested in their emission in solution. Part VI. Heterocyclic analogues, their triplets and exciplexes, 12:23161 (J;CH)

POLYESTERS
Chemical Radiation Effects
Electron beam-induced graft copolymerization of vinyl monomers on to polyester fibre, 12:23159 (R;MY)
Graft Polymers
Electron beam-induced graft copolymerization of vinyl monomers on to polyester fibre, 12:23159 (R;MY)

POLYETHERS
See POLYETHYLENE GLYCOLS

POLYETHYLENE GLYCOLS
Crystallization
Scattering studies on mixtures of poly(ethylene oxide) with poly(methyl methacrylate), 12:22938 (R;US)
Solvent Properties
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)

POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS

POLYETHYLENE TERPHTHALATE
See POLYESTERS

POLYETHYLENES
Cross-Linking
Radiation cross-linked polyethylene-based insulating mix, 12:23158 (RA;CS;In Czech)

POLY(ISOBUTYLENE OXIDE)
See ORGANIC POLYMERS

POLYMERS
See also ELASTOMERS
ORGANIC POLYMERS
Chemical Preparation
Ghost vesicles, 12:23136 (J;US)
Cross-Linking
Ghost vesicles, 12:23136 (J;US)
Crystal Structure
Crystal structure of undoped and lithium-doped polyparaphenylene, 12:22977 (J;GB)
Electric Conductivity
The workshop on conductive polymers: Final report, 12:22943 (R;US)
Meetings
The workshop on conductive polymers: Final report, 12:22943 (R;US)
Research Programs
Fundamental studies of elastomers: Progress report, June 15, 1984-June 14, 1987, 12:22942 (R;US)
Shear
Neutron scattering from charged polymer lattices, 12:22939 (R;US)
Statistics
Configurational statistics of a polymer chain with random sequence of elements, 12:23813 (R;DK)
Stresses
Applications of neutron scattering to problems in materials science, 12:22935 (J;US)
Structure Factors
Neutron scattering from charged polymer lattices, 12:22939 (R;US)
Surface Properties
Concentration profile of a dissolved polymer near the air-liquid interface: x-ray fluorescence study, 12:22973 (J;US)

POLYMETHYLMETHACRYLATES
See PMMA

POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS

POLYPEPTIDES
Electrophoresis
Detection of protein perturbations in metabolically activated cells, 12:23706 (RA;US)

POLYSTYRENE
Diffusion
Isotope effects on interdiffusion in blends of normal and deuterated polymers, 12:22968 (J;US)
Sorptive Properties
Improving the stability of coal slurries: Quarterly progress report for the period December 15, 1986-March 15, 1987 (Adsorption of gum tragacanth on polystyrene latex spheres), 12:22147 (R;US)

POLYSULFIDES

POROUS MATERIALS
Acoustics
A study of ultrasonic surface and bulk waves in saturated porous solids: Technical report No. 11, 12:23737 (R;US)
Enthalpy
Mechanics and applications of enthalpy-radiation energy conversion, 12:23228 (BA;US)
Radiant Heat Transfer
Mechanics and applications of enthalpy-radiation energy conversion, 12:23228 (BA;US)
Surface Area
Relationship between specific surface area and spatial correlation functions for anisotropic porous media, 12:24120 (J;US)

PORPHYRA
Aquaculture
Research on Porphyra aquaculture, 12:22375 (BA;DE)

PORPHYRINS
See also HEME
HEMOGLOBIN
PROTOPORPHYRINS
Bond Lengths
Iron-sulfur bond lengths in ferrous-CO heme complexes as a function of sulfur donor type, 12:23120 (J;US)
Synthesis, characterization, and electrochemical studies of iron, cobalt, and nickel complexes of polyphosphine ligands, 12:23117 (J;US)
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

PORTLAND CEMENT
Acidification
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Quantitative Chemical Analysis
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
POSITION SENSITIVE DETECTORS
Neutron Detection
Use of wire chambers in structural biology, 12:23379 (J;NL)
Si Semiconductor Detectors
Detection of charged particles in amorphous silicon layers, 12:23381 (J;NL)
Performance of a novel silicon detector, 12:23382 (J;NL)
POSITRONIUM
Emission
Positronium emission from lead, 12:22878 (J;US)
Fine Structure
On the treatment of Moeller and Breit-potentials and the covariant two-body equation for positronium and muonium, 12:23807 (R;XA)
Hyperfine Structure
On the treatment of Moeller and Breit-potentials and the covariant two-body equation for positronium and muonium, 12:23807 (R;XA)
POSITRONS
Annihilation
Positron or positronium-like surface state on Al(100), 12:24124 (J;US)
Particle Production
E^+e^- peaks at 1.8 MeV: Phenomenological constraints on nuclear transitions, axions, and the particle interpretation, 12:23900 (J;US)
POSTULATED PARTICLES
See also GLUONS
MAGNETIC MONOPOLES
QUARKS
Detection
New massive stable particles from superstrings and their detection using a time of flight system, 12:23854 (R;US)
Particle Decay
Leptonic and hadronic decay rates of winos, 12:23894 (R;AT)
Particle Identification
Hyperphoton production in W-boson decay, 12:23898 (J;US)
Particle Production
Search for the supersymmetric partners of the Z^0 and W/sup +/-/, 12:23845 (J;US)
Supersymmetry
Leptonic and hadronic decay rates of winos, 12:23894 (R;AT)
POTASSIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
POTASSIUM CARBONATES
Corrosive Effects
Corrosion of iron in molten carbonates at 650°C, 12:22702 (BA;US)
POTASSIUM NITRATES
Thermodynamic Properties
Thermodynamic properties of aqueous ternary solutions relevant to chemical heat pumps: Final report ($LiNO_3$-KNO_3-$NaNO_3$), 12:23109 (R;US)
POWER DEMAND
Forecasting
ACEEE [American Council for an Energy-Efficient Economy] 1986 summer study on energy efficiency in buildings: Volume 8, Proceedings from the panel on planning/forecasting, 12:22687 (R;US)
POWER PLANTS

PROPANE
Phase Studies
Phase behavior and minimum miscibility pressures for nitrogen miscible displacement: Topical report, 12:22187 (R;US)
Solubility
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
1-PROPANOL
See PROPANOLS
2-PROPANOL
See PROPANOLS
PROPANOLS
Solvent Properties
A microcrystalline growth study of solvent effects in alkoxides by dynamic laser light scattering, 12:23092 (R;US)
PROPELLANTS
Combustion Kinetics
Hybrid closed bomb-strand burner for very high pressure burning rate measurements, 12:23186 (R;US)
PROPORTIONAL COUNTERS
See also MULTIWIRE PROPORTIONAL CHAMBERS
Calibration
Comparison of the filtered-neutron beams at the NBS and PTB reactors by calibrating a spherical rem meter, 12:24087 (RA;FR)
Design
Light rem-counter of advanced technology, 12:23300 (RA;FR)
Personnel monitors utilizing tissue equivalent proportional counters, 12:23297 (RA;FR)
Portable microdosimetry system, 12:23293 (RA;FR)
Rem-meter based on tissue equivalent proportional counter, 12:23299 (RA;FR)
PROPYL ALCOHOLS
See PROPANOLS
PROTACTINIUM OXIDES
Ionization Potential
Thermochemical studies on the plutonium fluorides and protactinium oxides, 12:23179 (J;CH)
Thermodynamic Properties
Thermochemical studies on the plutonium fluorides and protactinium oxides, 12:23179 (J;CH)
PROTECTION
See SAFETY
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE CLOTHING
Valves
Evaluation of the performance of one-way valves used in chemical-protective suits, 12:23204 (R;US)
PROTEINS
See also HISTONES
LIPOPROTEINS
Activation Analysis
Measurement of protein distribution along seed depth using deuteron reactions, 12:23067 (RA;SU;In Russian)
Bioassay
Monoclonal antibodies for diagnosis and therapy, 12:23551 (RA;US)
Biochemistry
Protein chemistry and enzyme mechanisms, 12:23544 (RA;US)
Crystallography
CCD-based synchrotron X-ray detector for protein crystallography - Performance projected from an experiment, 12:23086 (J;US)
Energy Transfer
Davydov solitons exist at 300 K, 12:23553 (J;US)

Gene Regulation
Monoclonal antibodies for diagnosis and therapy, 12:23551 (RA;US)
Iodination
Radioiodination of serum amyloid protein, 12:23166 (RA;IL)
Labelling
Radioiodination of serum amyloid protein, 12:23166 (RA;IL)
Molecular Structure
Resonance Raman studies of blue copper proteins: effect of temperature and isotopic substitutions. Structural and thermodynamic implications, 12:23122 (J;US)
Structural study of the Cu sites in metallothionein from neurospora crassa, 12:23118 (J;US)
Neutron Diffraction
Use of wire chambers in structural biology, 12:23379 (J;NL)
Nuclear Reaction Analysis
Non-destructive testing of proteins in single seeds using the /sup 14/N(d,p)/sup 15/N and /sup 14/N(d,proportional to)/sup 12/C reactions, 12:23002 (R;MX;In Spanish)
Thermodynamic Properties
Resonance Raman studies of blue copper proteins: effect of temperature and isotopic substitutions. Structural and thermodynamic implications, 12:23122 (J;US)
X-Ray Fluorescence Analysis
CCD-based synchrotron X-ray detector for protein crystallography - Performance projected from an experiment, 12:23086 (J;US)

PROTEOLIPIDS
See LIPOPROTEINS

PROTON DOSIMETRY
Dielectric Track Detectors
Protons and neutrons registration by chemically and electrochemically etched CR-39 detectors, 12:23305 (RA;FR)
Dose Equivalents
Studies of dose as a function of depth in water-filled phantoms exposed around the CERN accelerators, 12:24079 (RA;FR)
Monte Carlo Method
Monte Carlo calculation of energy deposition and ionization yield for high energy protons, 12:24077 (RA;FR)
Proton Spectrometers
New spectrometer to monitor a proton beam for therapy at CYCLONE (Louvain-la-Neuve), 12:23334 (RA;FR)

PROTON MICROPROBE ANALYSIS
Ion Sources
Performance of a high brightness field ionization ion source, 12:23041 (RA;AU)
Uses
Application of a scanning proton microprobe to biological and medial research, 12:23049 (RA;AU)

PROTON PROBES
Beam Optics
Beam optics on the Melbourne Proton Microprobe, 12:23278 (RA;AU)

PROTON REACTIONS
On a peculiarity momentum distribution in proton-nucleus reactions in dependence on mass numbers, 12:24014 (RA;SU;In Russian)
Charge-Exchange Reactions
Study of the (/sup 3/He,t) reaction and the (p,n) reaction at intermediate energies, 12:24035 (R;DE;In German)
Coupled Channel Theory
Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei, 12:24028 (R;SU;In Russian)
Distorted Wave Theory
Analysis of the neutron energy spectra from the sup(208)Pb (p,n) sup(208)Bi reaction at Esub(p)=200 MeV, 12:24027 (R;SU)
GeV Range 100-1000
Studies of many-particle correlations in proton-nucleus interactions using distributions of rapidity-gaps between particles, 12:24038 (R;SE)
Impulse Approximation
Analysis of the neutron energy spectra from the sup(208)Pb (p,n) sup(208)Bi reaction at Esub(p)=200 MeV, 12:24027 (R;SU)
Inelastic Scattering
Measurement of total inelastic cross sections of proton and π/sup +/-meson interaction with nuclei in the momentum range from 1.35 to 3.75 GeV/c, 12:23938 (R;SU;In Russian)
Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si, 12:23947 (R;DE)
Knock-Out Reactions
Role of exchange processes in the cluster knockout reactions by mean-energy protons, 12:24021 (RA;SU;In Russian)
Nuclear Forces
Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei, 12:24028 (R;SU;In Russian)
Nuclear Reaction Yield
Emission of fast deuterons at the proton interactions with emulsion heavy nuclei, 12:23962 (R;SU;In Russian)
Pair Production
Quark-cluster-model predictions for the nuclear Drell-Yan process, 12:24043 (J;US)
Particle Production
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)
Total Cross Sections
/sup 10/Be(p,n) reaction at < 2 MeV proton energy. A possible ultrasensitive method for /sup 10/Be determination, 12:23951 (R;SU;In Russian)
Measurement of total inelastic cross sections of proton and π/sup +/-meson interaction with nuclei in the momentum range from 1.35 to 3.75 GeV/c, 12:23938 (R;SU;In Russian)

PROTON RECOIL DETECTORS
Design
Measurement of d(4)-^{9}Be neutron spectrum using a recoil proton spectrometer, 12:23335 (RA;FR)

PROTON SPECTROMETERS
Plastic Scintillation Detectors
New spectrometer to monitor a proton beam for therapy at CYCLONE (Louvain-la-Neuve), 12:23334 (RA;FR)

PROTON-ANTIPROTON INTERACTIONS
Annihilation
Search for the S meson in antiproton-proton interactions, 12:23842 (J;US)
Elastic Scattering
High energy hadron scattering with small four momentum transfer, 12:23870 (RA;CS;In Czech)
Search for the S meson in antiproton-proton interactions, 12:23842 (J;US)
Multiplicity
Multiplicity moments and KNO distribution density for pp-bar collisions at energy $\sqrt{s}$=540 GeV, 12:23871 (RA;CS;In Slovak)

PROTON-INDUCED X-RAY EMISSION ANALYSIS
See PIXE ANALYSIS

PROTON-NEUTRON INTERACTIONS
P Invariance
Neutral weak currents in the n+p -> d+e/sup +/+e/sup -/ process, 12:23877 (RA;SU;In Russian)
Weak Neutral Currents
Neutral weak currents in the n+p -> d+e/sup +/+e/sup -/ process, 12:23877 (RA;SU;In Russian)

PROTON-PROTON INTERACTIONS
Elastic Scattering
High energy hadron scattering with small four momentum transfer, 12:23870 (RA;CS;In Czech)
Particle Production
Threshold pion production in nucleon-nucleon collisions and extramass behaviour of the s wave πN amplitude, 12:23879 (RA;SU;In Russian)

PROTONS
Lifetime
Effect of localization on proton lifetime, 12:23864 (RA;CS;In Czech)
Membrane Transport
Chemiosmotic model for plant mitochondria, 12:23556 (J;US)
Particle Decay
Effect of localization on proton lifetime, 12:23864 (RA;CS;In Czech)

Particle Production
Inclusive spectra of hadrons in proton-nucleus collisions, 12:23855 (R;SU)
Properties of pC-interactions at Psub(p)=10 GeV/c with the emission of cumulative pions and protons, 12:23835 (R;SU;In Russian)
Polarized Products
Charge asymmetry in d+d reactions, 12:23943 (RA;CS;In Czech)
Proton polarization in /sup 2/H(d,p-vector)/sup 3/H and /sup 12/C(d,p-vector/sub 0/)/sup 13/C reactions at low energies, 12:23944 (RA;CS;In Czech)

PROTOPORPHYRINS
Chemical Reaction Kinetics
Kinetics of β-hydroxyl elimination from [(protoporphyrin)Fe(III)-CHRCH/sub 2/OH] in aqueous solutions. A pulse radiolytic study, 12:23153 (RA;IL)
Radiolysis
Kinetics of β-hydroxyl elimination from [(protoporphyrin)Fe(III)-CHRCH/sub 2/OH] in aqueous solutions. A pulse radiolytic study, 12:23153 (RA;IL)

PROTOSTARS
Infrared Spectra
Far-infrared investigation of the Taurus star-forming region using the IRAS database, 12:23763 (RA;US)

PSI-3105 RESONANCES
Hadronic Particle Decay
Baryonic decay of the J/psi and gluon spin, 12:23840 (R;FR;In French)
Particle Production
Preliminary results from experiment UA6 on inclusive J/psi production in pp interactions at $\sqrt{s}$ = 24.3 GeV, 12:23827 (R;US)

PSORALEN
Photochemistry
Reaction of the psoralens with deoxyribonucleic acid, 12:23147 (J;GB)

PSYCHOACTIVE AGENTS
See PSYCHOTROPIC DRUGS

PSYCHOSES
See MENTAL DISORDERS

PSYCHOTROPIC DRUGS
Labelling
Structure-reactivity in the bromination of some tricyclic compounds, 12:23168 (RA;IL)

PTERIDINES
Biological Functions
Regulation of pteridine biosynthesis and of pteridine function, 12:23705 (RA;US)
Metabolism
Regulation of pteridine biosynthesis and of pteridine function, 12:23705 (RA;US)

PTERINS
See PTERIDINES

PUBLIC BUILDINGS
Energy Efficiency
Cost containment through energy efficiency in Texas state-owned buildings, 12:22726 (RA;US)

PULMONARY CANCER
See CARCINOMAS

PULMONARY LAVAGE
See LUNGS

PULSARS
Plasma Instability
Plasma instabilities in the magnetosphere of pulsars, 12:23748 (RA;FR)

PULSE GENERATORS
Random pulse generator with an equal amplitude distribution, 12:23350 (R;DE;In German)

PULSED IRRADIATION
Chemical Radiation Effects
Conformational equilibria in trans-1,2-diarylethylenes manifested in their emission in solution. Part VI. Heterocyclic analogues, their triplets and exciplexes, 12:23161 (J;CH)
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

PULSED NEUTRON TECHNIQUES
Hydrocarbons
Application of PNA-technique for the measurement of multi-phase flow, 12:22999 (R;NO;In Norwegian)
Neutron Spectra
Influence of the thermal neutron energy distribution on results of pulsed measurements with small samples, 12:24058 (R;PL)
Two-Phase Flow
Application of PNA-technique for the measurement of multi-phase flow, 12:22999 (R;NO;In Norwegian)

PULVERIZED FUEL ASH
See FLY ASH

PULVERIZED FUELS
Combustion
Pilot-scale process evaluation of reburning for in-furnace NOx reduction. Final report, October 1984-October 1985, 12:23249 (R;US)

PULVERIZERS
Fire Prevention
Prevention, detection, and control of coal pulverizer fires and explosions: Final report, 12:22418 (R;US)
Fires
Prevention, detection, and control of coal pulverizer fires and explosions: Final report, 12:22418 (R;US)

PUMPS
Maintenance
Magnetic shaft seals prevent hazardous leakage from wastewater agitators, 12:22322 (J;US)
Performance
Magnetic shaft seals prevent hazardous leakage from wastewater agitators, 12:22322 (J;US)

PUREX PROCESS
Study of influence of uranium (6) on complexation of plutonium (4) in radiolytically degraded Purex system, 12:22245 (R;PL;In Polish)
Kinetics
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Optimization
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)

Containment Buildings
Construction and analysis of a 1/6th-scale concrete containment model, 12:22587 (RA;US)
Evaluation of structural failure modes for prestressed concrete containments, 12:22588 (RA;US)
Secondary containment building performance in severe accidents, 12:22563 (RA;US)
Containment Systems
Analysis of strategies for containment venting in case of severe accidents, 12:22566 (RA;US)

Failure mechanisms of LWR steel containment buildings subject to severe accident loadings, 12:22592 (RA;US)
Hydrogen burn assessment with the CONTAIN code, 12:22580 (RA;US)
Leak behavior through EPAs under severe accident conditions, 12:22597 (RA;US)
Leakage potential through mechanical penetrations in a severe accident environment, 12:22596 (RA;US)
Methods for determining integrated leakage rate test duration - case studies, 12:22573 (RA;US)
Preservice and inservice requirements for containment structures - a status report, 12:22570 (RA;US)
Small scale model for experimental investigations of the dynamic behavior of spherical steel containments, 12:22595 (RA;US)
Two aspects of hydrogen risk, 12:22578 (RA;US)

Critical Heat Flux
Thermal and mechanical behavior of APWR-claddings under critical heat flux conditions, 12:22458 (R;DE;In German)

Fuel Cans
Thermal and mechanical behavior of APWR-claddings under critical heat flux conditions, 12:22458 (R;DE;In German)

Heat Transfer
Performance evaluation of the courant limit violating numerical method in RELAP5/MOD2, 12:22460 (J;US)

High Pressure Coolant Injection
Thermal mixing tests in a semiannular downcomer with interacting flows from cold legs: International Agreement Report, 12:22602 (R;US)

Hydraulics
Performance evaluation of the courant limit violating numerical method in RELAP5/MOD2, 12:22460 (J;US)

Loss of Coolant
Results of Semiscale Mod-2C small-break loss-of-coolant accident without HPI [high-pressure injection] (S-NH) experiment series, 12:22599 (R;US)

Meetings
Proceedings of the second seminar on software development in nuclear energy research, 12:22446 (R;JP;In Japanese)

Meltdown
Further development of KAVERN and code development on gas generation from the containment basement during concrete decomposition, 12:22522 (R;DE;In German)
Risk analyses of accidents in nuclear power plants, 12:22524 (R;DE;In German)

Radiation Protection
Radiation and working conditions at NPP with WWER-440 and PWR, 12:22503 (RA;XM;In Russian)

Reactor Accidents
Analysis of strategies for containment venting in case of severe accidents, 12:22566 (RA;US)
Recent results of fission product release from the core and from the reactor containment after accidents, 12:22525 (R;DE;In German)

Reactor Cooling Systems
Thermal mixing tests in a semiannular downcomer with interacting flows from cold legs: International Agreement Report, 12:22602 (R;US)

Reactor Core Disruption
Thermal-hydraulic analysis of light water reactor severe core damage accident, 12:22556 (RA;JP;In Japanese)

Reactor Cores
Parametric thermohydraulic calculations for advanced pressurized water reactors with the code HADA-2, 12:22457 (R;DE)
Reactor physics problems on HCPWR, 12:22483 (RA;JP;In Japanese)

Reactor Kinetics
Vectorization of three-dimensional general-geometry Monte Carlo, 12:24060 (J;US)

Reactor Lattices
Thermodynamic problems on HCPWR, 12:22456 (RA;JP;In Japanese)

Reactor Materials
Long-term embrittlement of cast duplex stainless steels in LWR systems: Semiannual report, October 1985-March 1986, 12:22447 (R;US)

Reactor Protection Systems
Reliability studies for safety systems and comparison with evaluation of operating experiences, 12:22526 (R;DE;In German)

Reactor Safety
Evaluation of structural failure modes for prestressed concrete containments, 12:22588 (RA;US)
Failure mechanisms of LWR steel containment buildings subject to severe accident loadings, 12:22592 (RA;US)
Hydrogen burn assessment with the CONTAIN code, 12:22580 (RA;US)
Leak behavior through EPAs under severe accident conditions, 12:22597 (RA;US)
Leakage potential through mechanical penetrations in a severe accident environment, 12:22596 (RA;US)
Methods for determining integrated leakage rate test duration - case studies, 12:22573 (RA;US)
Secondary containment building performance in severe accidents, 12:22563 (RA;US)
Small scale model for experimental investigations of the dynamic behavior of spherical steel containments, 12:22595 (RA;US)
Two aspects of hydrogen risk, 12:22578 (RA;US)

Regulatory Guides
Incident guidelines for nuclear power stations of the FRG - an example illustrating the degradation of safety standards for nuclear power plants. Critical comments presented on the occasion of an official hearing of experts convened by the Parliamentary Committee of Internal Affairs of the German Bundestag, 12:22528 (R;DE;In German)

Spent Fuel Elements
Refabrication of spent fuel pins provided with instrumentation by means of the FABRICE process, 12:22450 (R;FR;In French)

Working Conditions
Radiation and working conditions at NPP with WWER-440 and PWR, 12:22503 (RA;XM;In Russian)

PWR
41 TYPE REACTORS

PYRENE
Carcinogen Screening
DNA repair studies in mouse germ cells exposed to two carcinogens and two non-carcinogens, 12:23698 (RA;US)

Carcinogenesis
Action of tumor initiators and promoters in the Syrian hamster embryo cell transformation assay, 12:23689 (R;US)

Deuteration
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)

Diffusion
Effects of molecular organization on photophysical behavior. Excimer kinetics and diffusion of 1-pyrenedecanoic acid in lipid monolayers at the nitrogen-water interface, 12:23146 (J;US)

Genetic Effects
DNA repair studies in mouse germ cells exposed to two carcinogens and two non-carcinogens, 12:23698 (RA;US)

Hydrogenation
Catalysts via hydrous metal oxide ion exchangers, 12:22101 (RA;US)
Formation of carbonaceous deposits on coal liquefaction catalysts, 12:22093 (RA;US)
Kinetics of hydrogenation using aged catalysts, 12:22099 (RA;US)

Mass Spectra
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)

Metabolism
Structural effects in reactivity and adduct formation of polycyclic aromatic epoxide and diol epoxide derivatives with DNA: comparison between 1-oxiranylpyrene and benzo[a]pyrenediol expoxide, 12:23713 (J;US)

Photochemistry
Effects of molecular organization on photophysical behavior. Excimer kinetics and diffusion of 1-pyrenedecanoic acid in

lipid monolayers at the nitrogen-water interface, 12:23146 (J;US)
Reaction Kinetics
Effects of molecular organization on photophysical behavior. Excimer kinetics and diffusion of 1-pyrenedecanoic acid in lipid monolayers at the nitrogen-water interface, 12:23146 (J;US)
Structure-Activity Relationships
Structural effects in reactivity and adduct formation of polycyclic aromatic epoxide and diol epoxide derivatives with DNA: comparison between 1-oxiranylpyrene and benzo[a]pyrenediol expoxide, 12:23713 (J;US)
PYRIDINE
Solvent Properties
Pretreatment techniques for coal gasification. Sixth quarterly report, January 1-March 31, 1986, 12:22127 (R;US)
Pretreatment techniques for coal gasification. Eighth quarterly report, July 1-September 30, 1986, 12:22128 (R;US)
Techniques for coal gasification: Final report, 12:22129 (R;US)
PYRIMIDINE DIMERS
DNA Repair
Genetic control of mutagenesis and DNA repair, 12:23560 (RA;US)
PYRIMIDINES
See also URACILS
Chemical Preparation
Borane reduction of uracil derivatives, 12:23137 (J;US)

Q

Q DEVICES
Convection
Convective cell experiments, 12:24222 (RA;FR)
Convective Instabilities
Convective cell experiments, 12:24222 (RA;FR)
QUADRUPOLES
Geometrical Aberrations
Scaling laws for aberrations in magnetic quadrupole lens systems, 12:23270 (R;US)
Scaling Laws
Scaling laws for aberrations in magnetic quadrupole lens systems, 12:23270 (R;US)
QUALITY ASSURANCE
Program Management
Organizing for quality: A structural perspective, 12:24316 (R;US)
QUANTIZATION
See also SECOND QUANTIZATION
Smooth Manifolds
Toeplitz operators - an asymptotic quantization of symplectic cones, 12:24164 (R;DE)
QUANTUM CHROMODYNAMICS
Analytical Solution
Towards an analytic solution of QCD: The glueball mass gap, 12:23919 (R;US)
Bose-Einstein Condensation
L=1 mesons and the four-quark condensate in QCD sum rules, 12:23849 (R;DE)
Bound State
Hadrons in two-dimensional quantum chromodynamics: Construction and study of bound states by means of perturbative and non-perturbative methods, 12:23863 (R;DE;In German)
Deep Inelastic Scattering
On the role of higher twists in describing scaling violation, 12:23860 (R;XA)
Four-Body Problem
L=1 mesons and the four-quark condensate in QCD sum rules, 12:23849 (R;DE)
Glueballs
Tensor gluonium spectrum in QCD, 12:23859 (R;XA)
Infrared Divergences
Magnetic mass of gluons in QCD/sub 3/, 12:23874 (RA;SU;In Russian)
Particle Production
Explicit formulae for heavy flavour production, 12:23895 (J;NL)
Perturbation Theory
Perturbative QCD analysis of exclusive pair production of higher-generation nucleons, 12:23897 (J;US)
Structure Functions
On the role of higher twists in describing scaling violation, 12:23860 (R;XA)
Sum Rules
Borel sum rules for the charmonium radiative decays in QCD, 12:23882 (R;SU;In Russian)
L=1 mesons and the four-quark condensate in QCD sum rules, 12:23849 (R;DE)
Sum rules in quantum chromodynamics, 12:23869 (RA;CS;In Czech)
Sum rules in hadron physics and quantum mechanics, 12:23873 (RA;CS;In Slovak)
Two-Dimensional Calculations
Hadrons in two-dimensional quantum chromodynamics: Construction and study of bound states by means of perturbative and non-perturbative methods, 12:23863 (R;DE;In German)
Vector Mesons
L=1 mesons and the four-quark condensate in QCD sum rules, 12:23849 (R;DE)
QUANTUM FIELD THEORY

STRING MODELS
Multiple Production
Inclusive reactions in the quasi-nuclear quark model: numerical results for hadron-hadron collisions, 12:23886 (R;HU)
Numerical Data
Inclusive reactions in the quasi-nuclear quark model: numerical results for hadron-hadron collisions, 12:23886 (R;HU)
Quark-Quark Interactions
Can an action-at-a-distance theory of quarks be established?, 12:23872 (RA;CS;In Slovak)

QUARK-ANTIQUARK INTERACTIONS
Central Potential
Static potential in a string model with extrinsic curvatures, 12:23887 (R;DK)
String Models
Calculation of the static interquark potential in the string model in the time-like gauge, 12:23881 (R;SU)

QUARKONIUM
A hypothetical bound state of quark and antiquark.
See also CHARMONIUM
TOPONIUM
Experimental heavy quarkonium physics. Introduction and survey, 12:23888 (R;NO)
Peculiarities of the quark-gluon mechanism of the formation of C-even heavy quarkonia in hadron collisions, 12:23856 (R;SU)
Energy-Level Transitions
Effect of long-wavelength approximation on one-photon transition rates calculation for QQ-bar systems, 12:23868 (RA;CS;In Czech)
Nonlocal Potential
Solving momentum-space integral equations for quarkonia spectra with confining potentials, 12:23930 (J;US)

QUARKS
Spinor Fields
On the algebraic construction of lepton-quark generations, 12:23875 (RA;SU;In Russian)

QUINOLINES
Adsorption
Extended luminescence calibration curves for studying surface interactions in solid-surface luminescence analysis, 12:23079 (J;US)
Denitrification
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Deuteration
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
Hydrogenation
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Luminescence
Extended luminescence calibration curves for studying surface interactions in solid-surface luminescence analysis, 12:23079 (J;US)
Mass Spectra
Simple method for the synthesis of perdeuterated aromatic hydrocarbons and heterocyclic compounds, 12:23094 (R;US)
Raman Spectra
Triplet (T_1) state resonance Raman spectroscopy of some azanaphthalenes, 12:23113 (J;US)
Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)

R

R MATRIX
Polarized Products
Analysis of energy dependence of polarization factors in the framework of R-matrix theory, 12:23942 (RA;CS;In Czech)

RABBITS
Chemical Composition
Energy and protein content of coyote prey in southeastern Idaho, 12:23470 (J;US)

RADIANT HEAT TRANSFER
Radiation transfer in sphere with internal source, 12:24155 (R;XA)
Variational Methods
Bivariational calculations for radiation transfer in an inhomogeneous participating media, 12:24147 (R;XA)

RADIATION ACCIDENTS
A preliminary evaluation of the economic risk for cleanup of nuclear material licensee contamination incidents, 12:22304 (R;US)
Bibliographies
Experience in the practical application of biological indicators. Appendix 2. DOE-REAC/TS radiation accident registries: Serious radiation accidents worldwide. A selected bibliography, 12:23672 (BA;DE)
Biological Indicators
Experience in the practical application of biological indicators. Appendix 1. The REAC/TS registries status, 12:23671 (BA;DE)
Emergency Plans
Activities, projects and emergency planning etc., at the National Institute of Radiation Hygiene in connection with the Chernobyl reactor accident (Norway), 12:22604 (R;NO;In Norwegian)
Elements of a national emergency response system for nuclear accidents, 12:22442 (R;US)
Nuclear emergency planning in Norway, 12:24384 (R;NO)
Inventories
Experience in the practical application of biological indicators. Appendix 1. The REAC/TS registries status, 12:23671 (BA;DE)

RADIATION BELTS
Energy Spectra
Limiting energy spectrum of a saturated radiation belt. Technical report, 12:23783 (R;US)

RADIOACTIVE WASTE DISPOSAL
Clays
Thermal behaviour of clay formations, 12:22277 (R;FR;In Italian)
Containers
Assessment of carbon steel overpacks for radioactive waste disposal, 12:22290 (R;FR)
Corrosion behaviour of container materials for the disposal of high-level wastes in rock salt formations. Activity report 1983-1984, 12:22288 (R;FR)
Corrosion behaviour of container materials for geological disposal of high-level waste. Annual progress report 1984, 12:22286 (R;FR)
Evaluation and compilation of DOE waste package test data: Biannual report, December 1985-July 1986, 12:22303 (R;US)
Erosion
Geoprospective study of a nuclear waste repository. Process of erosion and denudation, 12:22265 (R;FR;In French)
European Communities
Mirage project. Second summary progress report (Work period January to December 1984), 12:22275 (R;FR)

Geologic Formations
Geoprospective study of a nuclear waste repository: simulation of the evolution of a disposal site using a computer code named CASTOR, 12:22272 (R;FR;In French)
Geoprospective study of a nuclear waste repository taking seismic activity into account, 12:22269 (R;FR;In French)
Study of the coupling of geochemical models based on thermodynamic equilibrium with transfer models of components in solutions through porous or fissured media, 12:22281 (R;FR;In French)
Microorganisms
Investigations on the populations of introduced and resident micro-organisms in deep repositories and their effects on containment of radioactive wastes, 12:22289 (R;FR)
Radionuclide Migration
Coupling of transport and geochemical models, 12:22282 (R;FR)
Mirage project. Second summary progress report (Work period January to December 1984), 12:22275 (R;FR)
Probabilistic modeling of radionuclide release at the waste package subsystem boundary of a repository in basalt, 12:22328 (J;US)
Report on intercomparison studies of computer programs which respectively model: I) radionuclide migration II) equilibrium chemistry of groundwater, 12:22283 (R;FR)
Salt Deposits
Development of computer codes to perform model calculations for thermomechanical interaction of rock salt with borehole liners in a HLW repository, 12:22284 (R;FR;In German)
Geoprospective study of a nuclear waste repository: salt domes; bibliographic study of their genesis, 12:22267 (R;FR;In French)
Influence of fluid-rock interaction on the rheology of salt rock, 12:22287 (R;FR)
Sealing Materials
Evaluation of crushed aggregate and sand-bentonite mixtures for application to sealing of the final repository for reactor waste, 12:22315 (R;FI;In Finnish)
Site Selection
Effects of natural heating on a clay formation, 12:22279 (R;FR;In Italian)
Scale effect experiment in a fractured rock mass. Pilot study in the certified Fanay-Augeres mine (F), 12:22273 (R;FR;In French)
Tectonics
Geoprospective study of a nuclear waste repository. Prospective tectonics: convergent and divergent episodes, evolution of stress during the next 100,000 years, 12:22270 (R;FR;In French)
Geoprospective study of a nuclear waste repository. Vertical crustal movements: causes and quantification, 12:22268 (R;FR;In French)
Underground Disposal
Concentration ratios for BIOPATH: selection of the soil-to-plant concentration ratio database, 12:23490 (R;CH)
Effect of aging on the solubility and crystallinity of Np(IV) hydrous oxide, 12:22325 (J;US)
Sondierbohrung Boettstein: Hydrogeological testing of crystalline rocks, 12:22299 (R;CH)
Volcanism
Geoprospective study of a nuclear waste repository: volcanic activity, 12:22266 (R;FR;In French)
Geoprospective study of a nuclear waste repository. Vertical crustal movements: causes and quantification, 12:22268 (R;FR;In French)

RADIOACTIVE WASTE FACILITIES
SWSA [Solid Waste Storage Area] 6 tumulus disposal demonstration, 12:22258 (R;US)
Construction
Construction of an underground facility for "in-situ" experimentation in the boom clay, 12:22276 (R;FR)
Controlled Areas
Technical basis for high-level waste repository land control requirements for Palo Duro Basin, Paradox Basin, and Richton Dome, 12:22254 (R;US)
Design
Radioactive waste isolation in salt: Peer review of the Fluor Technology, Inc., report and position paper concerning waste emplacement mode and its effect on repository conceptual design, 12:22252 (R;US)
Materials Testing
Some considerations in the evaluation of concrete as a structural material for alternative LLW [low-level radioactive waste] disposal technologies, 12:22256 (R;US)
Research Programs
Salt Repository Project: Technical progress report for the quarter 1 January - 31 March, 1986, 12:22260 (R;US)
Ventilation Systems
Ventilation planning for a prospective nuclear waste repository, 12:22312 (R;US)

RADIOACTIVE WASTE MANAGEMENT
Information Dissemination
[National Congress of American Indians]: Final 1985-1986 progress report, March 1, 1986-October 7, 1986, 12:22263 (R;US)
Regulations
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Comparison of spent fuel management options, policies and regulations and applicability to Sweden , 12:22248 (R;SE)
Risk Assessment
Considerations of de minimis and exempt quantities, 12:22318 (BA;US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Information Systems
Subject directed project catalogues. A catalyst in Nordic cooperation?, 12:24379 (R;NO;In Norwegian)

RADIOACTIVITY
For measured values of radioactivity and for unidentified radiation sources; not for experimental studies.
See also NATURAL RADIOACTIVITY
Occupational Exposure
Measurement of individual doses annual report 1985, 12:23670 (R;SE;In Swedish)

RADIOCARBON DATING
See CARBON 14

RADIODIAGNOSIS (RADIONUCLIDES)
See NUCLEAR MEDICINE

RADIOGRAPHY (INDUSTRIAL)
See INDUSTRIAL RADIOGRAPHY

RADIOIMMUNOASSAY
Comparative Evaluations
Detection of HBsAg and Anti HBc on donors of a blood bank by IRMA and ELISA methods, 12:23585 (R;GT;In Spanish)

RADIOISOTOPE GENERATORS
Dosimetry
Radiation dosimetry of the Os-191/Ir-191m generator eluate, 12:23583 (RA;IL)

RADIOISOTOPE MIGRATION
See RADIONUCLIDE MIGRATION

RADIOISOTOPE-LABELLED DRUGS
See RADIOPHARMACEUTICALS

RADIOISOTOPES
See also DELAYED NEUTRON PRECURSORS
NEUTRON-RICH ISOTOPES
Natural Occurrence
Attempt to concentrate new natural spontaneously fissioning nuclide from geothermal brine of Cheleken Peninsula, 12:22395 (R;SU;In Russian)
Separation Processes
Attempt to concentrate new natural spontaneously fissioning nuclide from geothermal brine of Cheleken Peninsula, 12:22395 (R;SU;In Russian)
Uses
Industrial applications of radioisotope tracers, 12:22348 (RA;AU)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIOLYSIS
Methyl Iodide
Radiation formation of methyl iodide, 12:23157 (RA;CS;In Czech)
RADIOMETERS
Design
Optico-mechanical scanning radiometer, 12:23391 (TG;US)
RADIOMETRIC ANALYSIS
Comparative Evaluations
Comparison of methods of analysis for natural environmental radionuclides, especially Th and U, at the level of a few μg.g/sup -1/, 12:23044 (RA;AU)
RADIONUCLIDE CONCENTRATION
See RADIOACTIVITY
RADIONUCLIDE MIGRATION
In environment.
Determination of iodine 129 in environmental samples from Austria by neutron activation analysis. Working methods and results (1984-1985), 12:23417 (R;AT;In German)
B Codes
Concentration ratios for BIOPATH: selection of the soil-to-plant concentration ratio database, 12:23490 (R;CH)
Forecasting
Role of nuclear techniques in the long-term prediction of radionuclide transport, 12:23488 (RA;AU)
Mathematical Models
Probabilistic modeling of radionuclide release at the waste package subsystem boundary of a repository in basalt, 12:22328 (J;US)
Report on intercomparison studies of computer programs which respectively model: I) radionuclide migration II) equilibrium chemistry of groundwater, 12:22283 (R;FR)
Study of the coupling of geochemical models based on thermodynamic equilibrium with transfer models of components in solutions through porous or fissured media, 12:22281 (R;FR;In French)
S Codes
SWIFT [Sandia Waste Isolation Flow and Transport] II self-teaching curriculum: Illustrative problems for the Sandia Waste-Isolation Flow and Transport model for fractured media, 12:22327 (R;US)
RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
RADIONUCLIDES
See RADIOISOTOPES
RADIOPHARMACEUTICALS
Chemical Preparation
/sup 201/Tl-thallium chloride injections for cardiological applications, 12:23172 (RA;CS;In Czech)
Liver diagnosis using bromosulfophthalein labelled with iodine radionuclides, 12:23173 (RA;CS;In Czech)
Production technology of sodium /sup 125/I-iodide, 12:23171 (RA;CS;In Czech)
RADIOPROTECTIVE SUBSTANCES
Efficiency
Acute and chronic protection by WR2721 of rat parotid gland weight and function, 12:23685 (BA;US)
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
See also NEUTRON THERAPY
Microdosimetric spectra of heavy ion beams, 12:23612 (BA;US)
Cyclotrons
Progress with the 200 MeV cyclotron facility at the National Accelerator Centre, 12:23256 (RA;FR)
Historical Aspects
Historical review of californium-252 discovery and development, 12:23592 (J;US)
Proton Dosimetry
New spectrometer to monitor a proton beam for therapy at CYCLONE (Louvain-la-Neuve), 12:23334 (RA;FR)
Radiobiology
Significance of radiobiological research for the field of radiotherapy, 12:23643 (RA;DE;In German)
Radioprotective Substances
Acute and chronic protection by WR2721 of rat parotid gland weight and function, 12:23685 (BA;US)
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
RADIOTHORIUM
See THORIUM 228
RADIUM 226
Particle Tracks
Track detection methods of radium measurements, 12:22982 (R;HU)
Radioecological Concentration
Study on /sup 226/Ra concentrations in the CFP plant areas and on the radioactivity of lignites and cements containing fly ash, 12:23452 (R;GR;In Greek)
RADIUM F
See POLONIUM 210
RADIUM ISOTOPES
See also RADIUM 226
Collective Excitations
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
Nuclear Structure
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
RADON
Radiation Monitoring
Influence of source type and air exchange on variations of indoor radon concentration, 12:23465 (R;FI)
Radon in buildings in Hedmark county (Norway), 12:23464 (R;NO;In Norwegian)
Risk Assessment
Radon in buildings in Hedmark county (Norway), 12:23464 (R;NO;In Norwegian)
RADON 222
Alpha Detection
Investigation of the concentrations of radon-222 and its daughter products in Loutraki spas (Peloponnese, Greece), 12:23453 (R;GR;In Greek)
Radioecological Concentration
Influence of sealants of /sup 222/Rn emanation rate from building materials, 12:23463 (R;PL)
RAIN WATER
Atmospheric Precipitations
Tritium, deuterium and oxygen-18 content of rainwater from Pengkalan Chepa, Kota Bharu, Malaysia. (April 1980-January 1983), 12:23514 (R;MY)
Quantitative Chemical Analysis
Method for determination of oxygen-18 of hydrogen peroxide in rainwater, 12:23082 (J;US)
RAMAN SPECTROSCOPY
Prior to March 1983 this concept was indexed to RAMAN SPECTRA.
Calculation Methods
Spin—boson model for spectroscopy involving nonadiabatically coupled potential energy surfaces, 12:23814 (J;US)
Spectral Functions
Spin—boson model for spectroscopy involving nonadiabatically coupled potential energy surfaces, 12:23814 (J;US)
RANDOMNESS
Dynamics
Intrinsic stochasticity, 12:24228 (RA;FR)
Renormalization
Behavior of orbits of two coupled oscillators, 12:24229 (RA;FR)
RANGER DEPOSIT
Geochemistry
Studies of uranium deposits in the Alligator River region using PIXE and PIGME, 12:22236 (RA;AU)
RARE EARTH COMPOUNDS
See also CERIUM COMPOUNDS
GADOLINIUM COMPOUNDS

Atomic Radii
Size effects of RM/sub 5/ and R/sub 2/M/sub 17/ intermetallic compounds, 12:23107 (R;PL)
Crystal Structure
Studies of the structure of pseudobinary R/sub 2/(Co,M)/sub 17/ and R/sub 2/(Fe,M)/sub 17/ compounds, 12:23106 (R;PL)

RARE EARTH NUCLEI
For nuclear properties of rare earths.

EUROPIUM
GADOLINIUM
LANTHANUM
NEODYMIUM
SAMARIUM
TERBIUM
YTTERBIUM
Activation Analysis
REE determinations in single mineral grains using RNAA (Radiochemical neutron activation analysis), 12:23062 (RA;AU)
Use of neutron activation for the rare earth element analysis of granitic rocks and minerals, 12:23048 (RA;AU)
Dissolution
Decomposition of rare earth element raw materials and the method of separating the elements by oxalate precipitation, 12:23019 (RA;CS;In Czech)
Electrophoresis
Applications of isotachophoresis by Central Laboratories, Czechoslovak Uranium Industry, 12:23015 (RA;CS;In Czech)
Fluorescence Spectroscopy
Advances in the use of fluorimetry in inorganic analysis, 12:23013 (RA;CS;In Czech)
Precipitation
Decomposition of rare earth element raw materials and the method of separating the elements by oxalate precipitation, 12:23019 (RA;CS;In Czech)
Quantitative Chemical Analysis
Applications of isotachophoresis by Central Laboratories, Czechoslovak Uranium Industry, 12:23015 (RA;CS;In Czech)
Mining Pribram in science and technology. Modern methods of analytical process testing, 12:23011 (R;CS;In Czech)
Separation Processes
Separation of ionic solutes. Abstracts of papers, 12:23021 (R;CS;In English and Russian)
Solvent Extraction
New phosphorus containing extractants for separation of metals, 12:23029 (RA;CS)
Thermochromatography
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
Uses
Method and apparatus for optical temperature measurements, 12:23392 (P;US)
Valence
XPS studies of valence states of lanthanide and actinide elements in SYNROC C, 12:23047 (RA;AU)

RARE GASES
See also ARGON
HELIUM
KRYPTON
NEON
RADON
XENON
Multi-Photon Processes
Multiphoton ionization of nitric oxide-rare gas van der Waals species, 12:23145 (BA;US)
Radioactive Effluents
Statistic regularities of radioactive noble gases standardized releases from NPPs, 12:22510 (RA;XM;In Russian)
Van der Waals Forces
Multiphoton ionization of nitric oxide-rare gas van der Waals species, 12:23145 (BA;US)

RAREFIED GASES
Gas Flow
Effect of a convex boundary on a rarefied classical- or quantum gas. Flow past a stationary boundary and the effect of an oscillating boundary on the gas, 12:23225 (R;DK)

RAYLEIGH-TAYLOR INSTABILITY
Turbulence
Spectral characteristics of interchange turbulence in the ionosphere. Memorandum report, 12:23782 (R;US)

RDF
See REFUSE DERIVED FUELS

REACTION PRODUCT TRANSPORT SYSTEMS
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)

REACTIVITY
T Codes
TPTRIA - a computer program for the reactivity and kinetic parameters for two-dimensional triangular geometry by transport perturbation theory, 12:22484 (R;DE)

REACTOR ACCIDENTS

LOSS OF COOLANT
MELTDOWN
REACTOR CORE DISRUPTION
Emergency Plans
Activities, projects and emergency planning etc., at the National Institute of Radiation Hygiene in connection with the Chernobyl reactor accident (Norway), 12:22604 (R;NO;In Norwegian)
Environmental Impacts
Classification of accidents on NPP with WWER, 12:22547 (RA;XM;In Russian)
Failure Mode Analysis
Classification of accidents on NPP with WWER, 12:22547 (RA;XM;In Russian)
Fission Product Release
Recent results of fission product release from the core and from the reactor containment after accidents, 12:22525 (R;DE;In German)
Food Chains
Intercomparison of the terrestrial food chain models FOOD-MARC and ECOSYS, 12:23484 (R;DE)
Health Hazards
Radiation and health hazards. Chernobyl in perspective, 12:22553 (R;SE;In Swedish)
Heat Transfer
Computational methods of the Advanced Fluid Dynamics Model, 12:22558 (R;US)
Hydraulics
Computational methods of the Advanced Fluid Dynamics Model, 12:22558 (R;US)
Mathematical Models
Towards more realistic assessment of reactor accident consequences. A Nordic project, 12:22500 (R;NO)
Meltdown
Analysis of strategies for containment venting in case of severe accidents, 12:22566 (RA;US)
Meteorology
Advanced dispersion models for incident and accident analyses, 12:23457 (R;DE;In German)
Public Opinion
Why do we have such different opinions?, 12:22676 (RA;SE;In Swedish)
Radiation Monitoring
Radioactive fallout over Norway after the reactor accident in USSR, 12:23461 (R;NO;In Norwegian)

Radioactivity
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)
Radionuclide Migration
Towards more realistic assessment of reactor accident consequences. A Nordic project, 12:22500 (R;NO)
Remedial Action
Radioactive fallout over Norway after the reactor accident in USSR, 12:23461 (R;NO;In Norwegian)
Simulation
Equipment qualification issues research and resolution: Status report, 12:22598 (R;US)
Transfrontier Contamination
Report of the Federal Ministry for the Environment, Protection of Nature and Reactor Safety, on the reactor accident of Chernobyl, its repercussions, and precautions taken or to be taken - including addenda, 12:22527 (R;DE;In German)

REACTOR COMPONENTS

Corrosion
Materials resistant to seawater. Transfer of know-how from nuclear power plants to the offshore industry, 12:22837 (R;NO;In Norwegian)
Damping
The effect of PVRC damping with independent support motion response spectrum analysis of piping systems, 12:22610 (BA;US)
Design
Assessment and improvement of spectrum-broadening procedure in piping design, 12:22609 (BA;US)
Elasticity
High level dynamic testing and analytical correlations for a small bore piping system, 12:22496 (BA;US)
Heat Transfer
Thermal mixing tests in a semiannular downcomer with interacting flows from cold legs: International Agreement Report, 12:22602 (R;US)
Hydraulics
Thermal mixing tests in a semiannular downcomer with interacting flows from cold legs: International Agreement Report, 12:22602 (R;US)
Pipes
Assessment and improvement of spectrum-broadening procedure in piping design, 12:22609 (BA;US)
High level dynamic testing and analytical correlations for a small bore piping system, 12:22496 (BA;US)
The effect of PVRC damping with independent support motion response spectrum analysis of piping systems, 12:22610 (BA;US)
Plasticity
High level dynamic testing and analytical correlations for a small bore piping system, 12:22496 (BA;US)
Seismic Effects
Assessment and improvement of spectrum-broadening procedure in piping design, 12:22609 (BA;US)
The effect of PVRC damping with independent support motion response spectrum analysis of piping systems, 12:22610 (BA;US)
Stress Analysis
High level dynamic testing and analytical correlations for a small bore piping system, 12:22496 (BA;US)

REACTOR CORE DISRUPTION
Fission Product Release
Containment response and radiological release for a TMLB accident sequence in a large dry containment, 12:22581 (RA;US)
Thermodynamics
Thermal-hydraulic analysis of light water reactor severe core damage accident, 12:22556 (RA;JP;In Japanese)

REACTOR CORES
Doppler Effect
Considerations pertinent to the Doppler effect for space reactors, 12:22476 (R;US)
Hydraulics
Parametric thermohydraulic calculations for advanced pressurized water reactors with the code HADA-2, 12:22457 (R;DE)
Nuclear Fuel Conversion
Reactor physics problems on HCPWR, 12:22483 (RA;JP;In Japanese)
Supports
Hanging core support system for a nuclear reactor, 12:22493 (P;US)
Support arrangement for core modules of nuclear reactors, 12:22494 (P;US)

RENEWABLE RESOURCES
Gasification
Biological gasification of renewable resources. Final report, March 1984-December 1985, 12:22370 (R;US)

REPRESENTATIONS (IRREDUCIBLE)
See IRREDUCIBLE REPRESENTATIONS

REPUBLIC OF KOREA
Coal Deposits
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Coal Reserves
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)
Fossil-Fuel Power Plants
Research needs and data acquisition to apply US technology to foreign coals: Quarterly report, January-March 1987, 12:22162 (R;US)

RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
Planning
Long range plan for explosives technology group (M-1), 12:23394 (R;US)
Research and Development Program Plan for the Center for Engineering Systems Advanced Research (CESAR), 12:22673 (R;US)
Program Management
Research and Development Program Plan for the Center for Engineering Systems Advanced Research (CESAR), 12:22673 (R;US)

RESERVOIR ROCK
Crack Propagation
Extended analysis of constant-height hydraulic fractures for the estimation of in-situ crack-opening modulus from bottomhole pressure records, 12:22211 (R;US)
Hydraulic Fracturing
Extended analysis of constant-height hydraulic fractures for the estimation of in-situ crack-opening modulus from bottomhole pressure records, 12:22211 (R;US)
Permeability
Dispersivity as an oil reservoir rock characteristic: Annual report for the period October 1, 1985-September 30, 1986, 12:22184 (R;US)
Rock-Fluid Interactions
Dispersivity as an oil reservoir rock characteristic: Annual report for the period October 1, 1985-September 30, 1986, 12:22184 (R;US)

RESID
See PETROLEUM RESIDUES

RESIDENCES
See HOUSES

RESIDENTIAL BUILDINGS
See also HOUSES
Energy Accounting
Energy savings in retrofitted multi-family buildings: New results from the BECA-B [Buildings Energy Use Compilation and Analysis] project, 12:22766 (R;US)
Energy Conservation
Demand side experience in the Hood River Project, 12:22770 (BA;US)
Early results from the Hood River Conservation Project, 12:22773 (BA;US)
Evaluating a community based private/public partnership in residential energy conservation, 12:22743 (RA;US)
New directions for conservation programs, 12:22739 (RA;US)
New initiatives in financing multifamily energy conservation: recent developments in Chicago, 12:22752 (RA;US)
The ELCAP residential base study: Selection procedures and distribution of the final sample, 12:22771 (BA;US)
Energy Efficiency
Energy efficient mortgage: new lending policies to boost bank acceptance, 12:22757 (RA;US)
Energy management service - shared savings financing is it worth all the hassle?, 12:22755 (RA;US)
Evaluating a community based private/public partnership in residential energy conservation, 12:22743 (RA;US)
Financial impacts of energy conservation investment in public housing, 12:22758 (RA;US)
Financing energy efficiency in public housing: innovative regulatory opportunities, 12:22751 (RA;US)
Guldheden Project. Evaluation of extensive energy conservation measures in nine blocks of flats by measurements, 12:22720 (RA;US)
Leveraging private sector investment for multi-family energy conservation: new approaches to corporate/community financing, 12:22761 (RA;US)
Low-income community weatherization, 12:22744 (RA;US)
Marketing energy efficiency in North Carolina public housing: lessons learned from field experience, 12:22737 (RA;US)
Marketing the Austin Energy Star program using private sector techniques to market a public sector program, 12:22746 (RA;US)
New directions for conservation programs, 12:22739 (RA;US)
New initiatives in financing multifamily energy conservation: recent developments in Chicago, 12:22752 (RA;US)
Participation of the elderly in utility-sponsored residential conservation programs, 12:22731 (RA;US)
Residential segmentation for marketing utility programs: general or specific?, 12:22736 (RA;US)
Financing
Energy efficient mortgage: new lending policies to boost bank acceptance, 12:22757 (RA;US)
Fuel Systems
Advanced systems development - interior piping materials/configuration. Topical report, design concepts, March 1985-October 1986, 12:22212 (R;US)
Retrofitting
Energy savings in retrofitted multi-family buildings: New results from the BECA-B [Buildings Energy Use Compilation and Analysis] project, 12:22766 (R;US)
Weatherization
Evaluating a community based private/public partnership in residential energy conservation, 12:22743 (RA;US)
Low-income community weatherization, 12:22744 (RA;US)
Vermont Energy Investment Corporation and Energy Technicians, Inc. business plans: Final report to the Champlain Valley Office of Economic Opportunity on Department of Energy Energy-Related Business Development Grant, 12:22763 (R;US)

RESIDENTIAL SECTOR
Energy Expenses
Residential Energy Consumption Survey: Consumption and expenditures, April 1984 through March 1985: Part 1, National data, 12:22194 (R;US)
Fuel Consumption
Residential Energy Consumption Survey: Consumption and expenditures, April 1984 through March 1985: Part 1, National data, 12:22194 (R;US)
Indoor Air Pollution
Residential indoor air pollutants, 12:23454 (R;US)

RESIDUAL OILS
See PETROLEUM RESIDUES

RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES

RESISTORS
Electrical Properties
Fast pulse response of zinc-oxide varistors, 12:23245 (J;US)

RESONANCE CAVITIES
See CAVITY RESONATORS

RESONANCE PARTICLES
See also EXOTIC RESONANCES
MESON RESONANCES
Particle Production
Experimental search for narrow resonances in the reaction $\pi p\,p \rightarrow \gamma\gamma n$ at 13 GeV/c, 12:23848 (J;NL)

RESOURCE RECOVERY ACTS
SOILINER Version 1 (for microcomputers). Software, 12:23475 (R;US)

RESPIRABLE DUSTS
See DUSTS
RESPIRATORY SYSTEM
See also LUNGS
Neoplasms
Induction and progression of neoplasia in the respiratory tract, 12:22177 (RA;US)
RETINA
Biological Radiation Effects
Functional assessment of high-level laser irradiation. Annual progress report, 1 August 1983-31 December 1984, 12:23714 (R;US)
RETORTED SHALES
See SPENT SHALES
RETORTS
Mathematical Models
Preliminary mathematical model of the pyrolysis of bitumen-impregnated sandstone in a fluidized bed, 12:22221 (RA;US)
REVERSE OSMOSIS
See OSMOSIS
REVERSE-FIELD PINCH
Magnetic Reconnection
Nonlinear driven reconnection, 12:24236 (RA;FR)
Nonlinear Problems
Nonlinear evolution of current-driven instabilities in a reversed-field pinch, 12:24276 (J;US)
Plasma Heating
F-θ pumping with partial relaxation, 12:24263 (J;US)
Relaxation
Physics of Reversed Field Pinch, 12:24213 (RA;FR)
Reviews
Physics of Reversed Field Pinch, 12:24213 (RA;FR)
Specifications
Reversed field pinch boundary study: Annual progress report for the period March 14, 1986-March 13, 1987, 12:24283 (R;US)
Steady-State Conditions
Physics of Reversed-Field Pinch profile sustainment, 12:24215 (RA;FR)
RHENIUM 188
Rotational States
Gallagher-Moszkowski pairs in /sup 188/Re nucleus, 12:23999 (RA;CS;In Czech)
RHODIUM
Catalytic Effects
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)
RHODIUM BORIDES
Electronic Structure
Valence state of Ce and the magnetism in $CeRh_3B_2$, 12:22971 (J;US)
Magnetism
Valence state of Ce and the magnetism in $CeRh_3B_2$, 12:22971 (J;US)
RHODIUM COMPLEXES
Chemical Reactions
Metal arene complexes in coal structure determination: Quarterly report for the period December 1986-February 1987, 12:22148 (R;US)
RIBONUCLEASE
See RNA-ASE
RIBONUCLEIC ACID
See RNA
RIBOSOMAL RNA
Genes
Chromosomal replicons of higher plants, 12:23535 (R;US)
Transcription
Polymorphism in the ribosomal RNA genes in three heterothallic species of Neurospora, 12:23571 (J;US)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RIDESHARING
See CARPOOLING
VANPOOLING
RINGHALS-1 REACTOR
Ringhals, Vaeroebacka, Sweden
Containment Systems
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
Reactor Accidents
Method for consequence calculations for severe accidents. Transient accident with safety valve at Ringhals 1, 12:23491 (R;DK;In Danish)
Risk Assessment
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
RINGHALS-2 REACTOR
Ringhals, Vaeroebacka, Sweden
Containment Systems
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
Risk Assessment
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
RINGHALS-3 REACTOR
Ringhals, Vaeroebacka, Sweden
Containment Systems
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
Risk Assessment
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
RINGHALS-4 REACTOR
Containment Systems
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
Risk Assessment
Risk analyses of the Ringhals plants: containment behavior and filtered vent, 12:22564 (RA;US)
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RISK ANALYSIS
See RISK ASSESSMENT
RISK ASSESSMENT
Computerized Simulation
Reliability calculations. Improvements of methods intended for calculation of reliability of structures and systems, 12:22603 (R;DK)
RISOE NATIONAL LABORATORY
Prior to 1978, known as RISOE RESEARCH ESTABLISHMENT and documents written before that date should be so indexed.
Research Programs
Health Physics Department annual progress report 1 January-31 December 1985, 12:24314 (R;DK)
RIVERS
Flow Rate
Procedures for determining stream flowrate using radioisotope method in Pesanggrahan River, Indonesia, 12:23515 (R;MY;In Malay)
Hydrology
Use of linear compartmental simulation approach for quantitative interpretation of isotope data under time variant flow conditions, 12:23506 (RA;XA)
Radionuclide Migration
Simple mathematical model for radioactivity transport in river-reservoir system, 12:23530 (RA;CS;In Slovak)
Sedimentation
Application of environmental Cs-137 techniques to problems of sediment redistribution Sungai Lui Representative Basin, Selangor, Malaysia, 12:23418 (R;MY)
Application of Cs-137 techniques to problems of sediment redistribution in Sungai Lui representative basin, Selangor, Malaysia (Part 1). IAEA Regional Cooperative Agreement (MAL2623/R1/AG), 12:23510 (R;MY)
Soil Chemistry
Elemental composition of suspended particles from the Yellow and Yangtze Rivers, 12:23525 (J;US)

Water Chemistry
Elemental composition of suspended particles from the Yellow and Yangtze Rivers, 12:23525 (J;US)

RNA
See also RIBOSOMAL RNA
Biosynthesis
RNA synthesis in spermatocytes of sterile X-autosome translocation males, 12:23568 (RA;US)
Studies of RNA processing and turnover and EGF stimulation of transcription, 12:23545 (RA;US)

RNA POLYMERASE
See RNA

RNA POLYMERASES
Molecular Structure
Molecular studies of transcription by eukaryotic RNA polymerase II, 12:23546 (RA;US)

RNA-ASE
Code number 3.1.4.22 and 3.1.4.34.
Enzyme Activity
Studies of RNA processing and turnover and EGF stimulation of transcription, 12:23545 (RA;US)

ROBOTS
Telerobotic technology for nuclear and space applications, 12:23194 (R;US)
Computerized Simulation
A simulation and experimental method on planning and execution of straight line manipulator trajectories, 12:24367 (BA;US)
Manipulators
Manipulator technology: The critical element of useful autonomous "working" machines, 12:23192 (R;US)
Research Programs
Research and Development Program Plan for the Center for Engineering Systems Advanced Research (CESAR), 12:22673 (R;US)
Uses
Research and Development Program Plan for the Center for Engineering Systems Advanced Research (CESAR), 12:22673 (R;US)

ROCK CAVERNS
Radioactive Waste Disposal
Evaluation of crushed aggregate and sand-bentonite mixtures for application to sealing of the final repository for reactor waste, 12:22315 (R;FI;In Finnish)

ROCK MECHANICS
Dynamics
Annual review of US progress in rock mechanics: Rock dynamics, 12:23736 (R;US)
Excavation
Annual review of US progress in rock mechanics: Rock dynamics, 12:23736 (R;US)
Seismology
Annual review of US progress in rock mechanics: Rock dynamics, 12:23736 (R;US)

ROCK SALT
See SALT DEPOSITS

ROCKS
See also METAMORPHIC ROCKS
SYNTHETIC ROCKS
Geologic Fractures
Solute transport in fractured rocks, 12:23503 (RA;XA)
Radionuclide Migration
Mathematical modelling of fracture hydrology, 12:22280 (R;FR)

RODENTS
See also HAMSTERS
MICE
Chemical Composition
Energy and protein content of coyote prey in southeastern Idaho, 12:23470 (J;US)

RODS
Design
Pushrod assembly, 12:23207 (P;US)

RODS (FUEL)
See FUEL RODS

ROTATION
Relativistic Range
Transformation properties of Euler angles of a relativistic spinning top, 12:24175 (RA;CS;In Slovak)

ROTORS
Manufacturing
Metallurgical development and manufacture of large heavy structures for cryogenic applications: Final report, 12:23195 (R;US)

R-RNA
See RIBOSOMAL RNA

RUBBERS
See also LATEX
VITON
Aging
Aging studies of elastomers using a modulus profiling apparatus, 12:22961 (R;US)

RUBIDIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)

RUNOFF
Water Pollution
National data base of nonurban-nonpoint-source discharges and their effect on the nation's water quality. Final report, 12:23521 (R;US)

RUPTURE DISKS
See RELIEF VALVES

RURAL AREAS
Water Pollution
National data base of nonurban-nonpoint-source discharges and their effect on the nation's water quality. Final report, 12:23521 (R;US)

RUTHENIUM
Catalytic Effects
Fundamental studies in charge separation at interfaces in relation to water photolysis: Progress report, January 1, 1985-July 31, 1986, 12:23144 (R;US)
New catalysts for hydrotreating coal liquids, 12:22102 (RA;US)
Studies of carbon- and hydrogen-containing adspecies present during CO hydrogenation over unsupported Ru, Ni, and Rh, 12:23128 (J;US)
Chemical Properties
Chemistry and thermodynamics of ruthenium and some of its inorganic compounds and aqueous species, 12:23121 (J;US)
Distribution
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Thermodynamic Properties
Chemistry and thermodynamics of ruthenium and some of its inorganic compounds and aqueous species, 12:23121 (J;US)

RUTHENIUM COMPLEXES
Radiolysis
Radiolytic and electrochemical reduction of $Ru(bpz)_32i$ in aqueous solution. Stability, redox, and acid-base properties of $Ru(bpz)_3^{+1}$, 12:23142 (J;US)
Redox Reactions
Radiolytic and electrochemical reduction of $Ru(bpz)_3^{2+}$ in aqueous solution. Stability, redox, and acid-base properties of $Ru(bpz)_3^{+1}$, 12:23142 (J;US)
Reduction
Radiolytic and electrochemical reduction of $Ru(bpz)_3^{2+}$ in aqueous solution. Stability, redox, and acid-base properties of $Ru(bpz)_3^{+1}$, 12:23142 (J;US)

RUTHENIUM COMPOUNDS
See also RUTHENIUM OXIDES
Chemical Properties
Chemistry and thermodynamics of ruthenium and some of its inorganic compounds and aqueous species, 12:23121 (J;US)

Thermodynamic Properties
Chemistry and thermodynamics of ruthenium and some of its inorganic compounds and aqueous species, 12:23121 (J;US)

RUTHENIUM OXIDES
Chemical Reactions
Ruthenium tetroxide oxidation of low-rank coals, 12:22142 (RA;US)

RUTHERFORD SCATTERING
Reviews
Ion beam analysis of irradiated materials, 12:24133 (J;CH)

S

S CODES
Manuals
SWIFT [Sandia Waste Isolation Flow and Transport] II self-teaching curriculum: Illustrative problems for the Sandia Waste-Isolation Flow and Transport model for fractured media, 12:22327 (R;US)

S-1930 RESONANCES
Particle Production
Search for the S meson in antiproton-proton interactions, 12:23842 (J;US)

SABOTAGE
Physical Protection
Coping with terrorism, 12:24325 (J;US)
Political Aspects
Coping with terrorism, 12:24325 (J;US)
Vulnerability
Coping with terrorism, 12:24325 (J;US)

SACCHAROMYCES CEREVISIAE
Biological Models
Irradiated cell inactivation probabilistic model: consideration of sigmoidal form of intact cell fraction dose dependence, 12:23647 (R;SU;In Russian)
Biological Radiation Effects
Irradiated cell inactivation probabilistic model: consideration of sigmoidal form of intact cell fraction dose dependence, 12:23647 (R;SU;In Russian)
Gene Regulation
Genetic control of mutagenesis and DNA repair, 12:23560 (RA;US)
Production
Effect of the variation of the level of lactose conversion in an immobilized lactase reactor upon operating costs for the production of Baker's yeast from hydrolyzed permeate obtained from the ultrafiltration of cottage cheese whey, 12:22363 (R;US)

SACCHAROSE
Yields
The effect of salinity on the allocation of carbon to energy-rich compounds in Euphorbia lathyris, 12:22355 (R;US)

SAFEGUARDS
See also IAEA SAFEGUARDS
Personal Computers
Application of a Portable Briefcase Personal Computer to research reactor safeguards, 12:22336 (RA;AU)
Research Programs
Safeguards and security progress report, January-December 1985, 12:22338 (R;US)

SAFETY
For general aspects of safety and protection of personnel.
See also OCCUPATIONAL SAFETY
REACTOR SAFETY
Criticality
Computer-assisted instruction for nuclear criticality safety, 12:22331 (J;US)
Criticality of uranyl-nitrate solution in slab geometry, 12:22332 (J;US)
Technique for appraising preventive safety at nuclear facilities, 12:22333 (J;US)
Monte Carlo Method
Reliability calculations. Improvements of methods intended for calculation of reliability of structures and systems, 12:22603 (R;DK)

SAFETY (NUCLEAR)
See RADIATION PROTECTION

SAFETY (REACTOR)
See REACTOR SAFETY

SAFETY VALVES
See RELIEF VALVES

SALINE ZONE
See OIL SHALES
PICEANCE CREEK BASIN

SALT CAVERNS
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana, 12:22201 (R;US)
Radioactive Waste Disposal
Status of the WIPP - A defense transuranic waste isolation facility, 12:22320 (BA;US)

SALT DEPOSITS
Creep
Geoprospective study of a nuclear waste repository: salt domes; bibliographic study of their genesis, 12:22267 (R;FR;In French)
Dissolution
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana (Weeks Island, LA), 12:22201 (R;US)
Radioactive Waste Disposal
Americium concentrations in solutions contacting americium-doped glass, 12:22329 (J;US)
Radioactive Waste Facilities
Salt Repository Project: Technical progress report for the quarter 1 January - 31 March, 1986, 12:22260 (R;US)
Rock-Fluid Interactions
Influence of fluid-rock interaction on the rheology of salt rock, 12:22287 (R;FR)
Shaft Excavations
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana (Weeks Island, LA), 12:22201 (R;US)
Stratigraphy
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana (Weeks Island, LA), 12:22201 (R;US)
Thermal Conductivity
Thermal properties of Permian Basin evaporites to 493 K temperature and 30 MPa confining pressure, 12:22937 (R;US)
Thermal Diffusivity
Thermal properties of Permian Basin evaporites to 493 K temperature and 30 MPa confining pressure, 12:22937 (R;US)

SALTON SEA GEOTHERMAL FIELD
Well Drilling
Analyses of operational times and technical aspects of the Salton Sea scientific drilling project: [Final report], 12:22391 (R;US)

SALTS
Use specific salts whenever possible
See also MOLTEN SALTS
Purification
Sodium chloride purification (Purity control by X-ray fluorescence analysis), 12:23003 (R;GT;In Spanish)

SAMARIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)

SAMARIUM 151
Rotational States
^{152,154}Eu(t,α) reactions: studies of the 11/2[505] bands in ^{151}Sm and ^{153}Sm, 12:23980 (J;NL)

SAMARIUM 152
Integral Pac
Hyperfine magnetic fields on Sm nuclei in iron and nickel, 12:24111 (RA;CS;In Czech)
SAMARIUM 153
Rotational States
^{152,154}Eu(t,α) reactions: studies of the 11/2[505] bands in ^{151}Sm and ^{153}Sm, 12:23980 (J;NL)
SAMARIUM ALLOYS
Interstitials
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)
Thermal Diffusion
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)
SAND
Slurry Pipelines
Pressure gradient for heterogeneous flow of coal, sand, and iron in pipelines, 12:22784 (R;NL)
SANDSTONES
Acidification
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
Decomposition
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
Erosion
Cultural resource monitoring: Concurrent aerometric and materials deterioration studies at Mesa Verde National Park, 12:23480 (BA;US)
Gamma Logging
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
Permeability
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
Porosity
Reservoir sedimentology of Mesaverde rocks at the Multiwell Experiment site and east central Piceance Creek Basin, 12:22205 (R;US)
SANITARY LANDFILLS
Chlorinated Aromatic Hydrocarbons
Remediation of PCB (polychlorinated biphenyl) contamination, Woodbridge Research Facility, Woodbridge, Virginia. Final report, 27 September 1984-30 April 1986, 12:23472 (R;US)
Environmental Effects
Hazardous waste site assessment: Inactive landfill, Site 300, Lawrence Livermore National Laboratory, 12:23493 (R;US)
Environmental Impacts
Analysis of the validity of analytical models used for assessment of forty-five waste site areas: Subsurface flow and chemical transport, 12:23474 (R;US)
Health Hazards
Analysis of the validity of analytical models used for assessment of forty-five waste site areas: Subsurface flow and chemical transport, 12:23474 (R;US)
Liners
SOILINER Version 1 (for microcomputers). Software, 12:23475 (R;US)
Waste Disposal
SOILINER Version 1 (for microcomputers). Software, 12:23475 (R;US)
SARCOMAS
Neutron Therapy
Hyperthermia and Cf-252 neutron brachytherapy for bulky surface human neoplasms, 12:23599 (J;US)
SAVANNAH RIVER PLANT
Operation
200 Area Fault Tree Data Storage and Retrieval System: Area-H, 1/84 to 12/84, 12:22259 (R;US)
Sanitary Landfills
Analysis of the validity of analytical models used for assessment of forty-five waste site areas: Subsurface flow and chemical transport, 12:23474 (R;US)
SCANDIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Crystal-Phase Transformations
Static high pressure studies on Nd and Sc, 12:22870 (R;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
SCANDIUM 44
Electron Capture Decay
Measurement of EC/β/sup +/ ratio in light nuclei decay, 12:23955 (RA;CS;In Slovak)
SCANDIUM 45 TARGET
Proton Reactions
Monoenergetic neutrons of energies from 0.5 keV to 40 keV via the reaction ^{45}Sc(p,n)^{45}Ti, 12:24084 (RA;FR)
SCANDIUM COMPOUNDS
Brillouin Effect
Study of gadolinium-scandium-gallium garnet monocrystals by the Mandelstam-Brillouin light scattering method, 12:24113 (RA;SU;In Russian)
SCANNING ELECTRON MICROSCOPY
Spatial Resolution
Contamination-mediated deformation of graphite by the scanning tunneling microscope, 12:22966 (J;US)
SCATTERING
See also ELASTIC SCATTERING
LIGHT SCATTERING
Computer Calculations
The S/sub N//Monte Carlo response matrix hybrid method, 12:24340 (R;US)
T Codes
The S/sub N//Monte Carlo response matrix hybrid method, 12:24340 (R;US)
SCHMEHAUSEN THTR REACTOR
See THTR-300 REACTOR
SCHOOL BUILDINGS
Energy Efficiency
Energy analysis of a retrofitted school building with a solar air heater, 12:22718 (RA;US)
Solar Heating Systems
Energy analysis of a retrofitted school building with a solar air heater, 12:22718 (RA;US)
SCHOOL FACILITIES
See EDUCATIONAL FACILITIES
SCHOOL PLANT
See EDUCATIONAL FACILITIES
SCHOOLS
See EDUCATIONAL FACILITIES
SCHROEDINGER EQUATION
Series Expansion
Expansion of continuum wave functions in terms of resonant states. 2. Solvable models, 12:24151 (R;XA)
Solitons
On the stability of solitary waves of the (phi/sup 3/ - phi/sup 5/)-nonlinear Schroedinger equation under non-vanishing boundary conditions, 12:24176 (R;SU)
SCOTLAND
See UNITED KINGDOM
SCRAP
See also SCRAP METALS
Fluidized-Bed Combustion
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)
Materials Recovery
Experimental nickel-cobalt recovery from melt-refined superalloy scrap anodes. Report of investigations/1986, 12:23140 (R;US)

SCRAP METALS
Radioactive Waste Processing
Comparison of alternatives for the treatment of non-fuel-bearing hardware, 12:22308 (R;US)
SCREW PINCH
Plasma Confinement
Magnetohydrodynamic stability of plasmas with aligned mass flow, 12:24262 (J;US)
SEA BED
Heat Transfer
Subseabed Disposal Project thermal response studies: 1985 and 1986 annual report, October 1984 through September 1986, 12:22313 (R;US)
Radioactive Waste Disposal
Subseabed Disposal Project thermal response studies: 1985 and 1986 annual report, October 1984 through September 1986, 12:22313 (R;US)
Research Programs
Subseabed Disposal Project thermal response studies: 1985 and 1986 annual report, October 1984 through September 1986, 12:22313 (R;US)
SEALING MATERIALS
Materials Testing
Evaluation of crushed aggregate and sand-bentonite mixtures for application to sealing of the final repository for reactor waste, 12:22315 (R;FI;In Finnish)
SEALS
Performance
Magnetic shaft seals prevent hazardous leakage from wastewater agitators, 12:22322 (J;US)
Service Life
Magnetic shaft seals prevent hazardous leakage from wastewater agitators, 12:22322 (J;US)
SEAS
See also PACIFIC OCEAN
Ice
Icelandic sea-ice record, 12:23516 (J;GB)
SEAWATER
Corrosive Effects
Materials resistant to seawater. Transfer of know-how from nuclear power plants to the offshore industry, 12:22837 (R;NO;In Norwegian)
Quantitative Chemical Analysis
Tributyltin chloride in water: Solid phase extraction, capillary GC [gas chromatography] separation and EC [electron capture] detection, 12:22984 (R;US)
SEAWEEDS
Anaerobic Digestion
Stability of carrageenan during anaerobic digestion, 12:22374 (BA;DE)
Cultivation Techniques
Feasibility of mariculture of the brown seaweed, Sargassum muticum (Phaeophyta): Growth and culture conditions, alginic acid content and conversion to methane, 12:22373 (BA;DE)
Culture Media
Feasibility of mariculture of the brown seaweed, Sargassum muticum (Phaeophyta): Growth and culture conditions, alginic acid content and conversion to methane, 12:22373 (BA;DE)
Stability
Stability of carrageenan during anaerobic digestion, 12:22374 (BA;DE)
SEBACEOUS GLANDS
See SKIN
SECOND QUANTIZATION
Multi-Photon Processes
Generalized Jaynes-Cummings model for the N-level atom and (N-1) modes, 12:24157 (R;XA)
Three-level atom and two modes: Generalized models and multiphotons, 12:24153 (R;XA)
Occupation Number
N-level atom and (N-1) modes: Detuning, dynamics and statistical aspects, 12:24152 (R;XA)
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY COSMIC RADIATION
Radiation Doses
Feasibility of calculating the cosmic ray exposure rate at the Earth's surface, 12:23760 (RA;CS;In Slovak)
SECONDARY EMISSION DETECTORS
Neutrons
Measurement of secondary neutron energy spectra from (n,2n) reactions, 12:22991 (RA;IL)
SECURITY
Research Programs
Safeguards and security progress report, January-December 1985, 12:22338 (R;US)
SEDIMENTARY BASINS
Bathymetry
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
Geologic History
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
Geomorphology
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
Lithology
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
Seismic Surveys
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
Stratigraphy
Geological evolution and analysis of confirmed or suspected gas hydrate localities: Volume 6, Basin analysis, formation and stability of gas hydrates in the Panama Basin, 12:22202 (R;US)
SEDIMENTS
Activation Analysis
Fast neutron activation analysis, 12:22990 (R;DE;In German)
SEEDS
Nuclear Reaction Analysis
Non-destructive testing of proteins in single seeds using the /sup 14/N(d,p)/sup 15/N and /sup 14/N(d,proportional to)/sup 12/C reactions, 12:23002 (R;MX;In Spanish)
SEISMIC EFFECTS
Site Surveys
Post-earthquake investigation: Planning and field guide, 12:22517 (R;US)
SELENATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Desorption
Selenate-selenium sorption on a Columbia River basalt (Umtanum basalt, Washington, U.S.A.), 12:22324 (J;NL)
Sorption
Selenate-selenium sorption on a Columbia River basalt (Umtanum basalt, Washington, U.S.A.), 12:22324 (J;NL)
SELENIUM
Absorption Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
Desorption
Selenate-selenium sorption on a Columbia River basalt (Umtanum basalt, Washington, U.S.A.), 12:22324 (J;NL)

Sorption
Selenate-selenium sorption on a Columbia River basalt (Umtanum basalt, Washington, U.S.A.), 12:22324 (J;NL)

SEM (MICROSCOPY)
See SCANNING ELECTRON MICROSCOPY

SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS

SEMICONDUCTOR DETECTORS
See also GE SEMICONDUCTOR DETECTORS
SI SEMICONDUCTOR DETECTORS

Design
Development and applications of photosensitive device systems to studies of biological and organic materials: Progress report for period June 1964-December 1986, 12:22987 (R;US)

SEMICONDUCTOR DEVICES
See also SEMICONDUCTOR DIODES
SEMICONDUCTOR LASERS
Extrinsic gettering for VLSI/ULSI processes, 12:23244 (R;US)

Layers
Atomistic simulation of stability properties and growth of strained layer structures, 12:22958 (R;US)

SEMICONDUCTOR DIODES
See also PHOTODIODES
SILICON DIODES

Chemical Vapor Deposition
AlGaAs laser diodes grown by MOCVD, 12:22954 (R;JP)

Molecular Beam Epitaxy
AlGaAs laser diodes grown by molecular-beam epitaxy, 12:22955 (R;US)

Parametric Instabilities
Instabilities in the microwave GaAs-IMPATT diode amplifiers, 12:24101 (R;XA)

SEMICONDUCTOR LASERS
AlGaAs laser diodes grown by MOCVD, 12:22954 (R;JP)
AlGaAs laser diodes grown by molecular-beam epitaxy, 12:22955 (R;US)

SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.

Electronic Structure
Orbital removal method for the neutral vacancy in semiconductors, 12:24104 (R;XA)

Ion Implantation
Ion beam applications in semiconductor materials, 12:22947 (RA;AU)

Ion Microprobe Analysis
Channeling contrast microscopy: a new technique for microanalysis of semiconductors, 12:23064 (RA;AU)

Mathematical Models
The structure of constitutive equations for semiconductor devices, 12:23241 (R;US)

Research Programs
Semiconductor research capabilities at the Lawrence Berkeley Laboratory, 12:22953 (R;US)

Stability
Atomistic calculation of stability and metastability of coherently strained silicon-like structures, 12:22957 (R;US)

SENIOR CENTERS
See PUBLIC BUILDINGS

SEPARATION PROCESSES
See also CHEMISORPTION

Colloids
Effect of particle size and colloid stability on the wet high-intensity magnetic separation of uranium from cyanidation residues, 12:22238 (R;ZA)

Membrane Transport
Membrane extraction for preconcentration of radionuclides, 12:23026 (RA;CS)

Particle Size
Effect of particle size and colloid stability on the wet high-intensity magnetic separation of uranium from cyanidation residues, 12:22238 (R;ZA)

SERUM (BLOOD)
See BLOOD SERUM

SERVICE LIFE

Forecasting
Dependence of the predicted outdoor lifetime of biaphenol-A polycarbonates on the terrestrial UV irradiance spectrum, 12:23160 (J;NL)

SEWAGE SLUDGE

Biodegradation
Factors affecting polyphosphate kinase activity in Acinetobacter calcoaceticus var lwoffi isolated from a five-stage activated sludge plant, 12:22354 (RA;ZA)

Energy Recovery
A comprehensive study on the feasibility of energy recovery from sewage sludge: Final report, 12:23492 (R;US)

SHAFT EXCAVATIONS

Leaks
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana, 12:22201 (R;US)

SHALE OIL

Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)

SHEATHS (FUEL)
See FUEL CANS

SHIELDING

Gamma Spectrometers
Background suppression in large low-level shield, 12:23355 (RA;CS;In Slovak)

SHORT ROTATION CULTIVATION

Research Programs
Short Rotation Woody Crops Program: Project summaries, 12:22369 (R;US)

SHORT-LENS SPECTROMETERS
See MAGNETIC LENS SPECTROMETERS

SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.

Performance Testing
Performance test of a TMS calorimeter, 12:23365 (R;DE;In German)

SI SEMICONDUCTOR DETECTORS
See also LI-DRIFTED SI DETECTORS

Alpha Detection
Detection of charged particles in amorphous silicon layers, 12:23381 (J;NL)

Performance
Performance of a novel silicon detector, 12:23382 (J;NL)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SID
See SUDDEN IONOSPHERIC DISTURBANCE

SIGMA PARTICLES

Hadronic Particle Decay
Estimate of σ-> axions decay rate, 12:23861 (R;XA)

L-S Coupling
Spin-orbit interaction of sigma hyperon and spectra of light hypernuclei, 12:24001 (RA;CS;In Slovak)

SIGMA-MINUS ATOMS
See HADRONIC ATOMS

SILANES

Chemical Vapor Deposition
Laser diagnostics for chemical vapor deposition, 12:23087 (BA;US)

Fluorescence Spectroscopy
Laser diagnostics for chemical vapor deposition, 12:23087 (BA;US)

Raman Spectroscopy
Laser diagnostics for chemical vapor deposition, 12:23087 (BA;US)

SILICA

Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)

Catalytic Effects
Improved catalysts for coal liquefaction: Quarterly report No. 10 for the period November 30, 1986 to February 28, 1987, 12:22131 (R;US)

Partial oxidation of methane with nitrous oxide over V_2O_5-SiO_2 catalyst, 12:22357 (J;US)
Mineralization
Geothermal mineralization. I. The mechanism of formation of the Beowawe, Nevada, Siliceous sinter deposit, 12:22389 (J;US)
Sorptive Properties
Extended luminescence calibration curves for studying surface interactions in solid-surface luminescence analysis, 12:23079 (J;US)
SILICATES
See also GARNETS
NMR Spectra
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
Nuclear Magnetic Resonance
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
Annealing
Rapid thermal annealing of phosphorus implanted silicon, 12:22948 (RA;AU)
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
Crystal Doping
Silicon doping by neutron irradiation, 12:22349 (R;JP;In Japanese)
Distribution Functions
Evaluation of the distribution coefficient of silicon in cadmium using radioactive tracers, 12:22996 (RA;IL)
Electrical Properties
Depth profiles of H and O in thin films of a-Si:H, 12:24110 (RA;AU)
Electron Collisions
Soft x-ray generation by the Cherenkov effect, 12:24118 (R;US)
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
Energy Beam Deposition
Molecular-dynamics simulation of low-energy beam deposition of silicon, 12:24117 (R;US)
Molecular dynamics simulation of beam deposition of low-energy (10-100 eV) Si atoms on the Si(111) surface, 12:24116 (R;US)
Epitaxy
Ion beam induced epitaxial crystallization of amorphous silicon, 12:22946 (RA;AU)
Molecular-dynamics simulation of thin-film growth, 12:22941 (R;US)
Ion Implantation
Rapid thermal annealing of phosphorus implanted silicon, 12:22948 (RA;AU)
Photoconductivity
Electric-field-induced new features in the photoconductivity of extrinsic silicon, 12:22975 (J;US)
Resonant interactions of phonons with donor continuum states in silicon, 12:22976 (J;GB)
Physical Radiation Effects
Ion beam induced epitaxial crystallization of amorphous silicon, 12:22946 (RA;AU)
Soft X Radiation
Soft x-ray generation by the Cherenkov effect, 12:24118 (R;US)
Surface Coating
Atomistic simulation of stability properties and growth of strained layer structures, 12:22958 (R;US)
Tunnels at the silicon/tungsten interface: Causes and cures, 12:22867 (R;US)
SILICON 28
De-Excitation
Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si, 12:23947 (R;DE)
Nuclear Potential
On the shell potential choice for description of the 1d2s-shell nucleus photodisintegration, 12:24007 (RA;SU;In Russian)
SILICON 28 TARGET
Neutron Reactions
Effect of nucleus deformability on the diffraction scattering of intermediate-energy neutrons, 12:24019 (RA;SU;In Russian)
Proton Reactions
Search for the two-photon decay of the 2/sup +/ first excited states in /sup 18/O and /sup 28/Si, 12:23947 (R;DE)
SILICON 30
Neutron Reactions
Silicon doping by neutron irradiation, 12:22349 (R;JP;In Japanese)
SILICON ALLOYS
Amorphous State
Formation of amorphous plutonium alloys or metastable structures in Pu-Fe, Pu-Ta, Pu-Si alloys, 12:22889 (J;CH)
SILICON CARBIDES
Surface Properties
Surface characterization and manipulation of Si_3N_4 and SiC powders, 12:22927 (R;US)
SILICON COMPOUNDS
See also SILANES, SILOXANES and SILICONES.
See also SILANES
SILICATES
SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
Molecular Structure
High Si-H local mode overtones in $SiHD_3$, 12:23134 (J;US)
Photoacoustic Spectroscopy
High Si-H local mode overtones in $SiHD_3$, 12:23134 (J;US)
SILICON DIODES
Damaging Neutron Fluence
Eighth conference of Czechoslovak physicists. Part I. Vol. 1, 12:23820 (R;CS;In Czech, Slovak)
Properties of Si diodes after fast neutron irradiation, 12:22950 (RA;CS;In Slovak)
P-N Junctions
Anomalies of Si Pn-junctions after fast neutron irradiation, 12:22949 (RA;CS;In Slovak)
Stability
Unconditionally stable microwave Si-IMPATT amplifiers, 12:24102 (R;XA)
SILICON HYDRIDES
See SILANES
SILICON NITRIDES
Surface Properties
Surface characterization and manipulation of Si_3N_4 and SiC powders, 12:22927 (R;US)
SILICON OXIDES
See also SILICA
Chemical Preparation
A microcrystalline growth study of solvent effects in alkoxides by dynamic laser light scattering, 12:23092 (R;US)
Crystal Growth
A microcrystalline growth study of solvent effects in alkoxides by dynamic laser light scattering, 12:23092 (R;US)
Deuteration
Studies on deuteration of fused silica. Final report, 15 October 1983-14 October 1986, 12:23091 (R;US)
Energy Losses
Energy loss and scattering of subexcitation electrons in SiO_2, 12:24099 (R;US)
Fluorescence
Energy transfer among Yb/sup 3+/ ions in a silicate glass, 12:22965 (J;US)
SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS
SILICON SOLAR CELLS
Crystal Defects
Development of high-efficiency solar cells on silicon web: Final progress report for the period April 1, 1984 to September 30, 1986, 12:22367 (R;US)

Efficiency
Development of high-efficiency solar cells on silicon web: Final progress report for the period April 1, 1984 to September 30, 1986, 12:22367 (R;US)
Fabrication
Development of high-efficiency solar cells on silicon web: Final progress report for the period April 1, 1984 to September 30, 1986, 12:22367 (R;US)

SILVER
Absorption Spectroscopy
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Antiproton Reactions
Anisotropic and correlated emissions of short range charged particles in anti pAg/Br reactions of 1.4 GeV/c incident momentum observed in photographic emulsions, 12:23967 (R;NO)
Study of the angular distribution of the secondary particles of anti pAg/Br reactions at 1.4 GeV/c incident momentum observed in photographic emulsion, 12:23966 (R;NO)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Proton Reactions
Emission of fast deuterons at the proton interactions with emulsion heavy nuclei, 12:23962 (R;SU;In Russian)

SILVER 107 TARGET
Carbon 12 Reactions
Azimuthal correlations in central collisions of relativistic nuclei, 12:23936 (RA;CS;In Slovak)

SILVER COMPLEXES
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

SILVER ISOTOPES
Isotope Ratio
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)

SIMS
See MASS SPECTROSCOPY

SINE-GORDON EQUATION
Numerical Solution
Pattern selection and competition in near-integrable systems, 12:24341 (R;US)

SISTER CHROMATID EXCHANGES
Mutation Frequency
Further environmental factors causing variations of SCE frequencies, 12:23652 (R;AT)

SIZEWELL NUCLEAR POWER STATION B
See SIZEWELL-B REACTOR

SIZEWELL-B REACTOR
Sizewell, Suffolk, USA
Containment Systems
Influence of non-linearity and foundation behavior on containment integrity, 12:22589 (RA;US)
Reactor Safety
Influence of non-linearity and foundation behavior on containment integrity, 12:22589 (RA;US)

SKIN
See also HAIR
Neoplasms
Toxicokinetics of complex mixtures, 12:23710 (RA;US)

SKYRMIONS
See SOLITONS

SLAGS
Chemical Composition
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)

SLATIS-SIEGBAHN SPECTROMETERS
See MAGNETIC LENS SPECTROMETERS

SLC DETECTORS
Data Acquisition Systems
The data acquisition system for SLD, 12:23373 (J;US)
Data Processing
The Digital Correction Unit: A data correction/compaction chip, 12:23377 (J;US)
Data Transmission
Analog data transmission via fiber optics, 12:23374 (J;US)
Integrated Circuits
The Digital Correction Unit: A data correction/compaction chip, 12:23377 (J;US)
MOS Transistors
The Digital Correction Unit: A data correction/compaction chip, 12:23377 (J;US)

SLD
See SLC DETECTORS

SLUGS (FUEL)
See FUEL RODS

SLURRIES (FUEL)
See FUEL SLURRIES

SLURRY PIPELINES
Pressure Gradients
Pressure gradient for heterogeneous flow of coal, sand, and iron in pipelines, 12:22784 (R;NL)

SMALL BUSINESSES
Energy Conservation
Innovative, cost-effective use of capital resources to induce conservation investment by commercial businesses, 12:22764 (R;US)

SMALL INTESTINE
Crypt Cells
The response of mouse jejunal crypt cells to Cs-137 gamma rays and Cf-252 neutron irradiation, 12:23677 (J;US)

SMOKES
Environmental Exposure Pathway
Smoke and obscurants; a health and environmental effects data base assessment. A first-order, environmental screening and ranking of Army smokes and obscurants. Report for 1983-1985 on Phase 1, 12:23422 (R;US)
Environmental Impacts
The environmental fate of phosphates, chlorides, and organic residuals from combusted military smoke materials: Final report, 12:23445 (R;US)
Environmental Transport
The environmental fate of phosphates, chlorides, and organic residuals from combusted military smoke materials: Final report, 12:23445 (R;US)
Toxicity
Fire and smoke: understanding the hazards. Final report, January 1985-August 1986, 12:23434 (R;US)
Smoke and obscurants; a health and environmental effects data base assessment. A first-order, environmental screening and ranking of Army smokes and obscurants. Report for 1983-1985 on Phase 1, 12:23422 (R;US)

SNOW
Fallout Deposits
Run-off of strontium with melting snow in spring, 12:23485 (R;NO)

SODIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)

SODIUM 22
Electron Capture Decay
Measurement of EC/β/sup +/ ratio in light nuclei decay, 12:23955 (RA;CS;In Slovak)
Resonance
Studies on the light heavy ion system /sup 6/Li+/sup 16/O, 12:23948 (R;DE;In German)

SODIUM 23 REACTIONS
Heavy Ion Fusion Reactions
Fusion with polarized heavy ions. Particle evaporation and fission at energies at and below the barrier, 12:23959 (R;DE;In German)
SODIUM CHLORIDES
Biological Effects
Effects of NaCl on proline synthesis and utilization in excised barley leaves, 12:23575 (J;US)
Electronic Structure
Simplified electrostatic model for band-gap underestimates in the local-density approximation, 12:22970 (J;US)
SODIUM FLUORIDES
Carcinogenesis
Action of tumor initiators and promoters in the Syrian hamster embryo cell transformation assay, 12:23689 (R;US)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM IODIDES
Chemical Preparation
Production technology of sodium /sup 125/I-iodide, 12:23171 (RA;CS;In Czech)
Labelling
Production technology of sodium /sup 125/I-iodide, 12:23171 (RA;CS;In Czech)
SODIUM MINERALS
See MINERALS
SODIUM NITRATES
Solidification
Solidification of DOE problem wastes, 12:22255 (R;US)
Thermodynamic Properties
Thermodynamic properties of aqueous ternary solutions relevant to chemical heat pumps: Final report ($LiNO_3$-KNO_3-$NaNO_3$), 12:23109 (R;US)
Waste Forms
Solidification of DOE problem wastes, 12:22255 (R;US)
SODIUM-SULFUR BATTERIES
Design
Electrochemical cell with high conductivity glass electrolyte, 12:22649 (P;US)
Electrochemistry
Electrochemical methods in the analysis of high-temperature battery processes, 12:22620 (RA;US)
SOILS
Contamination
Investigation of thorium contamination at two target areas at White Sands Missile Range, 12:23489 (R;US)
Site investigation: Hydrocarbon leak near Building 403, Lawrence Livermore National Laboratory, 12:23476 (R;US)
Density
Density measurements in a heterogeneous soil system, 12:23060 (RA;AU)
Hydraulic Conductivity
Role of tracer data for modeling soil-water flow in the unsaturated zone, 12:23502 (RA;XA)
SOLANUM
Culture Media
Defined media for plant tissue culture: Final report, 12:22365 (R;US)
SOLAR ACTIVITY
See also FACULAE
SOLAR FLARES
SOLAR PROMINENCES
SOLAR RADIO BURSTS
SOLAR WIND
SUNSPOTS
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)
Solar Flares
Distribution of flares on the sun: super-active regions and active zones of 1980-1985, 12:23744 (R;US)
SOLAR CORONA
Brightness
White light solar corona: an atlas of 1985 K- coronameter synoptic charts, December 1984-December 1985. Technical note, 12:23766 (R;US)
Magnetohydrodynamics
Solar physics. Progress in solar hydromagnetics, 12:23745 (RA;FR)
Visible Spectra
White light solar corona: an atlas of 1985 K- coronameter synoptic charts, December 1984-December 1985. Technical note, 12:23766 (R;US)
SOLAR ENERGY
Energy Source Development
The development of renewable energy sources in the light of surplus energy, 12:22697 (BA;US;FR)
Research Programs
The development of renewable energy sources in the light of surplus energy, 12:22697 (BA;US;FR)
SOLAR FLARES
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)
Distribution
Distribution of flares on the sun: super-active regions and active zones of 1980-1985, 12:23744 (R;US)
Geomagnetic Field
From the sun's corona to the polar cusp aurora above Svalbard. Interplanetary and terrestrial effects of a coronal transient, 12:23785 (R;NO)
Magnetohydrodynamics
Solar physics. Progress in solar hydromagnetics, 12:23745 (RA;FR)
Polar-Cap Aurorae
From the sun's corona to the polar cusp aurora above Svalbard. Interplanetary and terrestrial effects of a coronal transient, 12:23785 (R;NO)
Sunspots
Distribution of flares on the sun: super-active regions and active zones of 1980-1985, 12:23744 (R;US)
SOLAR HEATING SYSTEMS
See also PASSIVE SOLAR HEATING SYSTEMS
Performance
Energy analysis of a retrofitted school building with a solar air heater, 12:22718 (RA;US)
SOLAR PROMINENCES
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)
SOLAR RADIATION
Mathematical Models
Global solar radiation in Trieste, Italy, 12:23751 (R;XA)
Radiowave Radiation
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
X Radiation
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)
SOLAR RADIO BURSTS
Solar-geophysical data number 507, November 1986. Part 2 (comprehensive reports). Data for May 1986, and miscellanea, 12:23765 (R;US)
SOLAR THERMAL CONVERSION
Use for overviews of solar thermal program.
Experimental studies of a closed-loop sulfur oxide energy conversion and transport system, 12:22384 (R;US)
SOLAR WIND
Capture
Collective capture of released lithium ions in the solar wind, 12:23772 (J;US)

Heat Flux
Ionospheric plasma study. Final report, 28 February 1983-28 February 1986, 12:23775 (R;US)
Interactions
Characteristics of polar-cap precipitation and their dependence on the interplanetary magnetic field and the solar wind, 12:23780 (R;US)
Magnetic Storms
Global auroral responses to magnetospheric compressions by shocks in the solar wind: two case studies, 12:23777 (R;US)
Plasma Instability
Ionospheric plasma study. Final report, 28 February 1983-28 February 1986, 12:23775 (R;US)

SOLDERED JOINTS
Fatigue
Fatigue and thermal fatigue testing of Pb-Sn solder joints, 12:23242 (R;US)

SOLID CLUSTERS
Chemical Reaction Kinetics
Uptake of ammonia by iron clusters: A new procedure for the study of metal cluster chemistry, 12:23115 (J;US)

SOLID SOLUTIONS
Phase Diagrams
Calculation of coherent phase equilibria, 12:24135 (J;GB)

SOLID STATE LASERS
Materials Testing
New laser materials: Final report, January 1985-December 1985, 12:23216 (R;US)

SOLID WASTES
See also SCRAP
Chemical Composition
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)
Chemical Properties
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)
Conversion
Summary of research activities and progress in utilization of municipal solid waste, 12:22793 (R;US)
Gasification
Biological gasification of renewable resources. Final report, March 1984-December 1985, 12:22370 (R;US)
Physical Properties
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)
Waste Disposal
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)
Waste Product Utilization
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)
Summary of research activities and progress in utilization of municipal solid waste, 12:22793 (R;US)
Testing materials for support-wall construction. Report of Investigations/1986, 12:22165 (R;US)

SOLIDS
Shock Waves
Simulation of shock-induced energy flux in molecular solids, 12:23396 (J;US)

SOLID-STATE PLASMA
Plasma Waves
Current fluctuations in sliding charge density waves, 12:24115 (R;DK)

SOLITONS
Quark Model
Baryon-like and meson-like solitons in a direct coupling quark model in one space dimension, 12:23885 (RA;SU)

SOLS
See also AEROSOLS
Chemical Radiation Effects
Mechanistic features of gamma radiation-induced formation of Pt hydrosols, 12:23151 (RA;IL)

SOLUTION MINING
Gas Analysis
Determination of nitrogen oxides in gaseous products of uranium ore pressure leaching, 12:22235 (RA;CS;In Czech)

SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS

SOUND
See SOUND WAVES

SOUND WAVES
Wave Propagation
Propagation of near-infrasound over long ranges, 12:24177 (R;US)

SOUTH ATLANTIC BIGHT
Water Currents
Coordination: Southeast continental shelf studies: A progress report, 12:23741 (R;US)

SOUTH DAKOTA
Granites
Nd, O and Sr isotopic constraints on the origin of Precambrian rocks, southern Black Hills, South Dakota, 12:23739 (J;US)
Metamorphic Rocks
Nd, O and Sr isotopic constraints on the origin of Precambrian rocks, southern Black Hills, South Dakota, 12:23739 (J;US)

SOUTH KOREA
See REPUBLIC OF KOREA

SOUTHERN HEMISPHERE
Ambient Temperature
Southern Hemisphere temperatures 1851-1985, 12:23421 (J;GB)

SOVIET UNION
See USSR

SP GROUPS
Phase Space
Realizations of simple Lie algebras, 12:24170 (RA;CS;In Czech)

SPACE FLIGHT
Research Programs
Toward the year 2000: The near future of the American civilian and military space programs, 12:24317 (R;US)

SPACE HVAC SYSTEMS
Heating, ventilation, and air conditioning systems.
Energy Management Systems
HVAC (heating, venting, and air conditioning) system fault diagnosis and energy optimization using state-space methods and modern control theory. Final report, 12:22768 (R;US)

SPACE POWER REACTORS
Reactor Cores
Considerations pertinent to the Doppler effect for space reactors, 12:22476 (R;US)
Reactor Kinetics
Considerations pertinent to the Doppler effect for space reactors, 12:22476 (R;US)
Stirling Engines
Overview of free-piston Stirling engine technology for space power application, 12:22477 (R;US)

SPACE VEHICLES
Electric Charges
Injection of an electron beam into a plasma and spacecraft charging, 12:23786 (J;US)
Materials Testing
High intensity 5 eV CW laser sustained O-atom exposure facility for material degradation studies, 12:23815 (J;US)

SPECTRA (NEUTRON)
See NEUTRON SPECTRA

SPECTRA UNFOLDING
Time Dependence
Technique for filling gaps in time series with complicated power spectra, 12:24343 (R;DK)

SPECTRAL BROADENING
See LINE BROADENING

SPECTRAL SHIFT
Plasmons
Effect of plasma oscillations on the radiation profile of the immersed ions in plasma, 12:24241 (RA;IL)

SPECTROCHEMISTRY
See ABSORPTION SPECTROSCOPY

SPECTROPHOTOMETERS
Extraction spectrophotometric analyzer, 12:23018 (RA;CS;In Czech)

SPEED INDICATORS
See VELOCIMETERS

SPENT FUEL CASKS
Shielding
System cost-effectiveness for increasing cask shielding, 12:23202 (R;US)
SPENT FUEL ELEMENTS
Fabrication
Refabrication of spent fuel pins provided with instrumentation by means of the FABRICE process, 12:22450 (R;FR;In French)
Surface Properties
Characterization of spent fuel for disposal without reprocessing. Final report, 12:22292 (R;DE;In German)
Underground Disposal
Characterization of spent fuel for disposal without reprocessing. Final report, 12:22292 (R;DE;In German)
SPENT FUELS
Fission Product Release
Release of fission products from irradiated SRP fuels at elevated temperatures: Data report on the second stage of the SRP source term study, 12:22240 (R;US)
Marine Disposal
Subseabed disposal of high-level radioactive waste, 12:22321 (BA;US)
Regulations
Spent fuel management strategies in eight countries and applicability to Sweden. Final report. Description of spent fuel management activities in each country and applicable laws and regulations , 12:22684 (R;SE)
Reprocessing
Studies on degradation and repurification of tributylphosphate solutions used in nuclear fuel reprocessing, 12:22244 (R;PL;In Polish)
Underground Disposal
Subseabed disposal of high-level radioactive waste, 12:22321 (BA;US)
SPENT SHALES
Environmental Impacts
Acid drainage from eastern oil shales, 12:22225 (RA;US)
Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)
SPERM
See SPERMATOZOA
SPERMATIDS
See SPERMATOZOA
SPERMATOGONIA
Genetic Radiation Effects
Difference between two hybrid stocks of mice in the incidence of congenital abnormalities following X-ray exposure of stem-cell spermatogonia, 12:23656 (RA;US)
Nature of strain differences in spermatogonial responses to radiation, 12:23655 (RA;US)
Sensitivity
In-depth study of chemical mutagenesis in mouse germ cells using N-ethyl-N-nitrosourea (ENU) as a model mutagen, 12:23694 (RA;US)
SPERMATOZOA
DNA Repair
DNA repair studies in mouse germ cells exposed to two carcinogens and two non-carcinogens, 12:23698 (RA;US)
DNA Replication
Dose-rate effect of ethylene oxide inhalation exposures on unscheduled DNA synthesis in mouse spermatids, 12:23696 (RA;US)
Lethal Mutations
Mechanisms for induction of chromosome aberrations in male germ cells by chemical mutagens, 12:23697 (RA;US)
Mutations
Synaptic behavior of a new translocation T(X;7)18Rl and the hypothesis of G-synapsis, 12:23565 (RA;US)
Sensitivity
Dose-rate effect of ethylene oxide inhalation exposures on DNA breakage in mouse spermatids, 12:23695 (RA;US)
SPHERES
Chemical Preparation
Ghost vesicles, 12:23136 (J;US)
SPHERES (FUEL)
See FUEL SPHERES
SPHEROMAK DEVICES
Magnetic Reconnection
Nonlinear driven reconnection, 12:24236 (RA;FR)
SPICULES
See SOLAR PROMINENCES
SPIN-LATTICE RELAXATION
Electron spin-lattice relaxation in fractals, 12:24109 (R;XA)
SPINOR FIELDS
Quasipotential Equation
On the Coulomb gauge for the spinor-spinor quasipotential, 12:23883 (R;SU;In Russian)
SPLEEN
Dose-Response Relationships
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)
Low Dose Irradiation
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)
SPLEEN CELLS
Biological Radiation Effects
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
Colony Formation
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
Lethal Irradiation
Study of RBE of Cf-252 of hemopoietic tissue and PLD-like effect of magnetic fields by CFU-S assay, 12:23674 (J;US)
Radiation Protection
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
SPLEEN COLONY FORMATION
Biological Radiation Effects
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
Radiation Protection
Radioprotection of colony forming units-spleen against heavy charged particle damage by WR 2721, 12:23681 (BA;US)
SPORES
Biological Radiation Effects
"Thin-Down" in radiobiology, 12:23684 (BA;US)
SPRAY DRYING
Computerized Simulation
Lime-spray-dryer flue-gas desulfurization computer model user's manual. Final report, January 1982-April 1986, 12:22436 (R;US)
SRM
See CALIBRATION STANDARDS
STABILITY (REACTOR)
See REACTOR STABILITY
STAINLESS STEEL-304
Creep
Influence of grain boundary structure distribution and processing history on intergranular creep cavitation: Progress report for period March 1, 1986-February 28, 1987, 12:22827 (R;US)
Gas Tungsten-Arc Welding
Optical spectral radiometric method for measurement of weld-pool surface temperatures, 12:22887 (J;US)
Grain Boundaries
Influence of grain boundary structure distribution and processing history on intergranular creep cavitation: Progress report for period March 1, 1986-February 28, 1987, 12:22827 (R;US)
Laser Welding
Electron emission and plasma formation during laser beam welding, 12:22909 (J;US)
STAINLESS STEEL-304L
Atom Transport
Reduction of tritium permeation through 304L stainless steel using aluminum ion implantation, 12:22877 (J;US)

Degassing
Influence of outgassing on the properties of hot isostatically pressed 304L stainless steel, 12:22831 (RA;IL)
Density
Influence of outgassing on the properties of hot isostatically pressed 304L stainless steel, 12:22831 (RA;IL)
Ion Implantation
Reduction of tritium permeation through 304L stainless steel using aluminum ion implantation, 12:22877 (J;US)
Permeability
Reduction of tritium permeation through 304L stainless steel using aluminum ion implantation, 12:22877 (J;US)
Tensile Properties
Influence of outgassing on the properties of hot isostatically pressed 304L stainless steel, 12:22831 (RA;IL)

STAINLESS STEEL-316
Electron Diffraction
A comparison of XEDS and EELS with the use of conventional beryllium window and windowless Si(Li) detectors, 12:23090 (BA;US)
Energy-Loss Spectroscopy
A comparison of XEDS and EELS with the use of conventional beryllium window and windowless Si(Li) detectors, 12:23090 (BA;US)
Fuel Cans
Fuel-cladding chemical interaction correlation for mixed-oxide fuel pins, 12:22519 (R;US)
Irradiation
Effect of minor alloying elements on radiation damage evolution in stainless steel, 12:22863 (R;MY)
Physical Radiation Effects
On transport of helium grain boundaries during irradiation, 12:22864 (R;DK)
Swelling
Effect of minor alloying elements on radiation damage evolution in stainless steel, 12:22863 (R;MY)
Voids
Effect of minor alloying elements on radiation damage evolution in stainless steel, 12:22863 (R;MY)

STAINLESS STEELS
STAINLESS STEEL-304
See also STAINLESS STEEL-304L
STAINLESS STEEL-316
STEEL-DIN-1-4948
Catalytic Effects
Oil shale quarterly report, October-December 1986, 12:22222 (R;US)
Corrosion
Evaluation and compilation of DOE waste package test data: Biannual report, December 1985-July 1986, 12:22303 (R;US)
Preliminary investigations on the corrosivity of PUSPATI's tap water toward different types of steel, 12:22861 (R;MY)
Cryogenics
Development of a high-strength high-manganese stainless steel for cryogenic use, 12:23201 (R;JP)
Embrittlement
Long-term embrittlement of cast duplex stainless steels in LWR systems: Semiannual report, October 1985-March 1986, 12:22447 (R;US)
Reactor Materials
Long-term embrittlement of cast duplex stainless steels in LWR systems: Semiannual report, October 1985-March 1986, 12:22447 (R;US)

STANDARD ELECTROWEAK MODEL
See WEINBERG-SALAM GAUGE MODEL

STANDARD MODEL
Reviews
Probing the structure of the universe from quarks to cosmology, 12:23770 (J;US)

STANDARD REFERENCE MATERIALS
See CALIBRATION STANDARDS

STANDING CROP
See BIOMASS

STANFORD LINEAR ACCELERATOR CENTER
Fastbus System
FASTBUS dual-port memory and display diagnostic module, 12:23283 (J;US)

STAR CLUSTERS
Globular clusters, 12:23771 (J;US)

STATE BUILDINGS
See PUBLIC BUILDINGS

STATE DIAGRAMS
See PHASE DIAGRAMS

STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.
Graph-theoretic measures of multivariate association and prediction, 12:24374 (J;US)
Optimal solution for maximizing the probability of retention in PPS sampling, 12:24366 (J;US)
Projection pursuit density estimation, 12:24368 (J;US)
Regression Analysis
Interesting property of the sample mean under a first-order autoregressive model, 12:24370 (J;US)
Uses
Statistical applications at Rocky Flats, 12:24348 (R;US)

STEAM GENERATION PLANTS
Chemical Effluents
Aqueous discharges from steam-electric power plants: Reference guide for monitoring six selected conventional and nonconventional pollutants: Final report, 12:23532 (R;US)
Thermal Effluents
Aqueous discharges from steam-electric power plants: Reference guide for monitoring six selected conventional and nonconventional pollutants: Final report, 12:23532 (R;US)

STEAM GENERATORS
Repair
Steam generator tube extraction, 12:22490 (R;FR)
Tubes
Stress corrosion cracking test of expanded steam generator tubes: Final report, 12:22489 (R;US)

STEEL INDUSTRY
See METAL INDUSTRY

STEEL-ASTM-A106
Fracture Properties
Transition range drop tower J-R curve testing of A106 steel, 12:22858 (R;US)
Impact Tests
Transition range drop tower J-R curve testing of A106 steel, 12:22858 (R;US)

STEEL-DIN-1-4948
Equivalent to STAINLESS STEEL-304.
Creep
Creep tests in base material and welded specimens of X6CrNi 1811 (DIN 1.4948) steel in the frame of AUSOL-program. 1. interim report (September 1986), 12:22853 (R;DE;In German)

STEEL-DIN-1-4970
Physical Radiation Effects
Heavy ion irradiation with 200 keV Ni-ions to study the swelling of iron and nickel and the technical alloys, 12:22847 (R;DE;In German)

STEELS
See also AUSTENITIC STEELS
CARBON STEELS
CHROMIUM STEELS
MANGANESE STEELS
STAINLESS STEELS
Acidification
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Corrosion
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Preliminary investigations on the corrosivity of PUSPATI's tap water toward different types of steel, 12:22861 (R;MY)
Fracture Properties
Mechanisms of transformation toughening: Final report, 12:22826 (R;US)

Hardening
Mechanisms of transformation toughening: Final report, 12:22826 (R;US)
Interstitials
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)
Phase Transformations
Mechanisms of transformation toughening: Final report, 12:22826 (R;US)
Quantitative Chemical Analysis
Effects of acid deposition on Portland cement concrete, 12:23481 (BA;US)
Thermal Diffusion
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)

STELLARATORS
See also WENDELSTEIN-7 STELLARATOR
Magnetic Islands
Stellarator magnetic surfaces without islands, 12:24284 (RA;FR)
Reviews
Status of stellarator research, 12:24210 (RA;FR)
Stochastic Processes
Stellarator magnetic surfaces without islands, 12:24284 (RA;FR)

STEM CELLS
Genetic Radiation Effects
Dose-rate effects on the response of mouse spermatogonial stem cells to X-ray induction of heritable translocations, 12:23654 (RA;US)
Mutations
Dose-rate effects on the response of mouse spermatogonial stem cells to X-ray induction of heritable translocations, 12:23654 (RA;US)

STERILE MALE TECHNIQUE
Mathematical Models
Bioeconomic study of a multispecies pest subjected to a pesticide, 12:23621 (R;XA)

STIMULATED EMISSION DEVICES
See GASERS
LASERS

STIRLING ENGINES
Electric Generators
Overview of free-piston Stirling engine technology for space power application, 12:22477 (R;US)
Feasibility Studies
Overview of free-piston Stirling engine technology for space power application, 12:22477 (R;US)
Performance Testing
RE-1000 free-piston Stirling engine sensitivity test results, 12:22806 (R;US)

STOCHASTIC PROCESSES
Poisson Equation
Almost sure stability of linear stochastic systems with poisson process coefficients, 12:24358 (J;US)
Stability
Almost sure stability of linear stochastic systems with poisson process coefficients, 12:24358 (J;US)

STOPPING POWER
New version of the energy-deposition code D-DEP-1: better stopping powers. Final report, 12:24050 (R;US)

STOPPING POWER (TOTAL ATOMIC)
See STOPPING POWER

STOPPING POWER (TOTAL LINEAR)
See STOPPING POWER

STOPPING POWER (TOTAL MASS)
See STOPPING POWER

STORAGE BATTERIES
See ELECTRIC BATTERIES

STORAGE BATTERIES (LEAD-ACID)
See LEAD-ACID BATTERIES

STORAGE RINGS
See also CERN ISR
CESR STORAGE RING
SUPERCONDUCTING SUPER COLLIDER
Ion Beams
Heavy ion synchrotron and cooler ring at GSI, 12:23261 (R;DE)

STORES
See COMMERCIAL BUILDINGS

STRAND BREAKS
Radioinduction
Alkaline-elution measurement of DNA breakage and repair in isolated pachytene spermatocytes and spermatids after exposure to X rays, 12:23657 (RA;US)

STRATEGIC DEFENSE INITIATIVE
See BALLISTIC MISSILE DEFENSE

STRATEGIC PETROLEUM RESERVE
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana (Weeks Island, LA), 12:22201 (R;US)
Program Management
Strategic Petrolem Reserve: Annual/quarterly report, 12:22199 (R;US)

STRATOSPHERE
Radioactivity
The High Altitude Sampling Program: Radioactivity in the stratosphere: Final report, 12:23455 (R;US)

STREAMS
See also RIVERS
Energy Budgets
Allochthonous detritus input to a small, cold desert spring-stream, 12:23507 (R;US)
Mineral Cycling
Microbial activity and phosphorus uptake on decomposing leaf detritus in a heterotrophic stream, 12:23497 (R;US)
Production of soluble, high molecular weight phosphorus and its subsequent uptake by stream detritus, 12:23496 (R;US)
Simulation
Artificial streams for ecosystem toxicity studies: Final report, 12:23517 (R;US)

STRENGTH (FRACTURE)
See FRACTURE PROPERTIES

STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Strings in spring (86) (String theory), 12:23915 (R;US)
Amplitudes
Non-perturbative study of regularized bosonic string amplitudes, 12:23922 (R;DK)
Lectures
Superstring spectroscopy, 12:23925 (R;US)
Mathematical Manifolds
Supermanifolds and super Riemann surfaces, 12:23914 (R;US)
Postulated Particles
New massive stable particles from superstrings and their detection using a time of flight system, 12:23854 (R;US)
Quantization
Stochastic quantization of gauge, gravitational and string fields, 12:23927 (R;AT)
Quark-Antiquark Interactions
Static potential in a string model with extrinsic curvatures, 12:23887 (R;DK)
Regge Trajectories
Classical dynamics of strings with rigidity, 12:23896 (J;US)
Riemann Space
Supermanifolds and super Riemann surfaces, 12:23914 (R;US)
Scale Dimension
Appearance of critical dimensions in regulated string theories. Pt. 2, 12:23921 (R;DK)

STRONTIUM
Activation Analysis
Determination of concentration of some plant elements in reactions with charged particles, 12:23069 (RA;SU;In Russian)
Autoionization
Studies of autoionizing states relevant to dielectronic recombination: Progress report, July 1, 1986-June 30, 1987, 12:23799 (R;US)

Energy Levels
Studies of autoionizing states relevant to dielectronic recombination: Progress report, July 1, 1986-June 30, 1987, 12:23799 (R;US)
Ion Exchange Chromatography
Development of partitioning method: dynamic adsorption characteristics of titanic acid and zeolite mixed column for Sr and Cs ions, 12:22297 (R;JP;In Japanese)
Membrane Transport
Emulsion membrane extraction of strontium and its separation from calcium utilizing crown and picric acid, 12:23027 (RA;CS)
Sixth Czechoslovak biophysical congress with international participation. Abstracts of papers, 12:23640 (R;CS)
Radionuclide Migration
Run-off of strontium with melting snow in spring, 12:23485 (R;NO)
Separation Processes
Emulsion membrane extraction of strontium and its separation from calcium utilizing crown and picric acid, 12:23027 (RA;CS)
Membrane extraction for preconcentration of radionuclides, 12:23026 (RA;CS)
Solvent Extraction
Use of 18-crown-6 and its derivates for concentration and selective separation of strontium(II) and for sub- and super-equivalence method of isotope dilution analysis, 12:23033 (RA;CS)
STRONTIUM 85
Retention
Mucociliary clearance and particle retention in the maxillary and ethmoid turbinate regions of beagle dogs, 12:23680 (J;US)
STRONTIUM 90
Solvent Extraction
Separation of fission products from high level radioactive wastes by dicarbolide extraction, 12:22293 (RA;CS;In Czech)
STRONTIUM COMPOUNDS
NMR Spectra
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
Nuclear Magnetic Resonance
Solid-state oxygen-17 nuclear magnetic resonance spectroscopic studies of alkaline earth metasilicates, 12:23085 (J;US)
STRUCTURAL MATERIALS
See BUILDING MATERIALS
STRUCTURAL MODELS
Techniques for implementing statically complete component mode synthesis for forced response, 12:23189 (R;US)
Chemical Bonds
Metal arene complexes in coal structure determination: Quarterly report for the period December 1986-February 1987, 12:22148 (R;US)
Hydrogen Transfer
Hydrogenolysis in coal liquefaction and pyrolysis: The relative importance of solvent radicals and free hydrogen atoms (Dihydroanthracene, 9,10-dihydrophenanthrene, tetralin, pyrene, 1- and 2-methylnaphthalene, 1,2′-dinaphthylmethane, and 4,5-dihydropyrene), 12:22121 (RA;US)
Hydrogenation
Enhanced coal liquefaction by low-severity catalytic reactions: Technical progress report for the period December 1986 to February 1987 (3,5 dimethyl phenol, diphenyl ketone, p-hydroxybenzaldehyde, tetrahydro-1-naphthol, bibenzyl, biphenyl, pyrene, benzyl ether, phenyl ether, phenyl-ethyl-ether, decahydronaphthalene), 12:22136 (R;US)
STRUCTURES (BUILDINGS)
See BUILDINGS
STYRENE POLYMERS
See POLYSTYRENE
SUBBITUMINOUS COAL
Biodegradation
Biodegradation and bioconversion of coals by fungi: Technical report No. 6 for the period December 1, 1986-February 28, 1987, 12:22133 (R;US)
Microbial coal liquefaction, 12:22112 (RA;US)
Microbial processing of fuels, 12:23613 (RA;US)
Calorific Value
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Chemical Composition
CANMET coprocessing of low-rank Canadian coals, 12:22115 (RA;US)
Coal liquefaction co-processing, 12:22114 (RA;US)
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)
Cleaning
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)
Cultivation
Microbial coal liquefaction, 12:22112 (RA;US)
Desulfurization
Use of basic nitrogen to chemically clean coal: Quarterly report No. 2 for the period December 16, 1986 to March 15, 1987, 12:22135 (R;US)
Grinding
The treatment of some low-rank coals with carbon dioxide water: Effects on slurry-relevant properties: Final report, 12:22084 (R;US)
Hydrogenation
Enhanced coal liquefaction by low-severity catalytic reactions: Technical progress report for the period December 1986 to February 1987, 12:22136 (R;US)
Molecular Structure
Chemical structure of low-rank coals, 12:22144 (RA;US)
Oxidation
Ruthenium tetroxide oxidation of low-rank coals, 12:22142 (RA;US)
Structural Chemical Analysis
Chemical structure of low-rank coals, 12:22144 (RA;US)
Ruthenium tetroxide oxidation of low-rank coals, 12:22142 (RA;US)
Weathering
Biodegradation and bioconversion of coals by fungi: Technical report No. 6 for the period December 1, 1986-February 28, 1987, 12:22133 (R;US)
SUCROSE

MOLYBDENUM SULFIDES
URANIUM SULFIDES
Catalytic Effects
Novel liquefaction solvent: H_2O-H_2S, 12:22110 (RA;US)
SULFUR
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission III, 12:24130 (J;NL)
Recovery
Coal gasification via the Lurgi process: Topical report: Volume 2, Production of IFG [industrial fuel gas], 12:22124 (R;US)
Solubility
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)

SULFUR 32
Nuclear Potential
On the shell potential choice for description of the 1d2s-shell nucleus photodisintegration, 12:24007 (RA;SU;In Russian)
SULFUR COMPOUNDS
See also SULFATES
SULFIDES
SULFUR OXIDES
Ion Collisions
Implications of heavy-ion-induced satellite x-ray emission V, 12:24132 (J;NL)
SULFUR CYCLE
Sulfur cycling in five forest ecosystems, 12:23477 (J;NL)
SULFUR DIOXIDE
Absorption
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
Sulfur dioxide removal from flue gases by supported copper and iron absorbents: Technical report No. 2, 11/16/86-2/15/87, 12:22157 (R;US)
Air Pollution Control
Combustion and fuel bound contaminant control with a staged cyclone coal combustor for gas turbines: Topical report, July 1, 1985-March 31, 1986, 12:22169 (R;US)
Why an SO_2 emission tax is an unpopular policy instrument: Simulation results from a general equilibrium model of the Norwegian economy, 12:23424 (R;US)
Emission
A comparison of a multilayer regional-scale acid rain assessment model (MLRAPT) with a single-layer assessment model, RAPT, 12:23448 (J;NL)
Removal
Boiler design criteria for dry sorbent SO_2 control with low-NOx burners: new unit applications. Final report, October 1985-March 1986, 12:22435 (R;US)
Fundamental studies of calcium-based sorbents for SO_2 control from coal-fired boilers. Final report, October 1983-September 1984, 12:23252 (R;US)
Summary report to Congress on emerging clean coal technologies capable of retrofitting, repowering, or modernizing existing facilities, 12:22155 (R;US)
Solubility
Development of a process for simultaneous desulfurization, drying, and recovery of natural gas liquids from natural gas streams, 12:22206 (R;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Ion-Atom Collisions
High charge state, ion-atom collision experiments using accel-decel, 12:23793 (R;US)
SULFUR ISOTOPES
See also SULFUR 32
Deuteron Reactions
Systematic study of the deuteron scattering on even-even sd-shell nuclei by means of the particle-gamma angular correlation at E/sub d/=10 MeV, 12:23954 (R;DE;In German)
SULFUR OXIDES
See also SULFUR DIOXIDE
Decomposition
Experimental studies of a closed-loop sulfur oxide energy conversion and transport system, 12:22384 (R;US)
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Atmospheric Precipitations
A comparison of a multilayer regional-scale acid rain assessment model (MLRAPT) with a single-layer assessment model, RAPT, 12:23448 (J;NL)
SUM RULES
Sum rules in hadron physics and quantum mechanics, 12:23873 (RA;CS;In Slovak)
SUN
Magnetic Fields
Solar physics. Progress in solar hydromagnetics, 12:23745 (RA;FR)
SUNSPOTS
Distribution of flares on the sun: super-active regions and active zones of 1980-1985, 12:23744 (R;US)
Solar-Geophysical Data Number 507, November 1986. Part 1 (prompt reports). Data for October, September 1986, and late data, 12:23764 (R;US)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCOMPUTERS
Supercomputer environments for hardware and software technology forecast, 12:24351 (R;US)
Evaluation
Agenda for improved evaluation of supercomputer performance. Final report, 12:24346 (R;US)
Research Programs
Activities and operations of the Advanced Computing Research Facility, July-October 1986, 12:24327 (R;US)
Reviews
Parallel supercomputing today and the cedar approach, 12:24359 (J;US)
Technology Assessment
Perspectives on superconducting, 12:24363 (J;US)
SUPERCONDUCTING COILS
Data Acquisition Systems
Data acquisition and processing for testing of superconducting coils, 12:24295 (R;DE;In German)
SUPERCONDUCTING COMPOSITES
Critical Current
Effect of strain on the critical-current density of Cu-Nb composites, 12:22876 (J;US)
Pressure Effects
Effect of strain on the critical-current density of Cu-Nb composites, 12:22876 (J;US)
Strains
Effect of strain on the critical-current density of Cu-Nb composites, 12:22876 (J;US)
SUPERCONDUCTING GENERATORS
Rotors
Metallurgical development and manufacture of large heavy structures for cryogenic applications: Final report, 12:23195 (R;US)
SUPERCONDUCTING MAGNETS
Development of a high-strength high-manganese stainless steel for cryogenic use, 12:23201 (R;JP)
Functional Models
Electron apparatus complex to examine the superconductor magnet on the heat model, 12:23199 (R;SU;In Russian)
SUPERCONDUCTING SUPER COLLIDER
Data Processing
Future plans for HEP computing in the U.S. , 12:23822 (BA;NL)
Uses
Probing the structure of the universe from quarks to cosmology, 12:23770 (J;US)
SUPERCONDUCTIVITY
Experimental summary, 12:24142 (R;US)
SUPERCONDUCTORS
See also TYPE-II SUPERCONDUCTORS
Experimental summary, 12:24142 (R;US)
Impurities
Magnetic impurities in superconductors: Performance report, July 1, 1986-August 31, 1987, 12:24139 (R;US)
Research Programs
Magnetic impurities in superconductors: Performance report, July 1, 1986-August 31, 1987, 12:24139 (R;US)
Specific Heat
Brillouin-Wigner theory of mixed-valence impurities in BCS superconductor: T/sub c//T/sub cO/ and ΔC/ΔC/sub O/, 12:24141 (R;XA)
Transition Temperature
Brillouin-Wigner theory of mixed-valence impurities in BCS superconductor: T/sub c//T/sub cO/ and ΔC/ΔC/sub O/, 12:24141 (R;XA)
SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERCRITICAL GAS EXTRACTION
Mathematical Models
Supercritical water/CO liquefaction and a model for coal conversion (Buffered water solutions and CO), 12:22108 (RA;US)
SUPERGRAVITY
Geometry and physics of Wess-Zumino supergravity, 12:23933 (J;US)
Perturbative and global anomalies in supergravity theories, 12:24163 (R;XA)
Symmetry Breaking
Non-linear realization of minimal Einstein N=1 supergravity, 12:24174 (RA;CS;In Czech)
SUPERLATTICES
Band Theory
Band theory of superlattices, 12:24121 (J;US)
Elasticity
Nanocontact measurements in superlattices, 12:22824 (R;US)
SUPERMULTIPLETS
Multiplets of Verma modules over the osp(2,2)/sup (1)/ super Kac-Moody algebra, 12:23910 (R;XA)
SUPERSYMMETRY
Conformal Invariance
N=2 superconformal invariance in two-dimensional quantum field theories, 12:23911 (R;DK)
N=2 superconformal theories, 12:23912 (R;DK)
Symmetry Breaking
Cosmology, inflation, and supersymmetry, 12:23773 (BA;NL)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTS (CATALYST)

Calibration Standards
1984 EC enquiry into the needs for nuclear reference materials ($Z>89$), 12:22998 (RA;XA)
Advances in chemical standards for nuclear fuel analysis and safeguards purposes. Report of a consultants' meeting on nuclear reference materials, needs and availability held in Antwerp, Belgium, 8-11 October 1985, 12:22997 (R;XA)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
X-Ray Spectroscopy
Incorporation of trace metals and radionuclides into goethite, 12:23052 (RA;AU)
THORIUM 228
Radioecological Concentration
Investigation of thorium contamination at two target areas at White Sands Missile Range, 12:23489 (R;US)
THORIUM 232
Radioecological Concentration
Investigation of thorium contamination at two target areas at White Sands Missile Range, 12:23489 (R;US)
THORIUM COMPLEXES
Bond Angle
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)
Bond Lengths
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

Crystal Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)
Molecular Structure
Organothorium-nickel phosphido complex with a short Th-Ni distance. Structure of $Th(eta_5\text{-}C_5(CH_3)_5)_2(\mu\text{-}PPh_2)_2Ni(CO)_2$, 12:23126 (J;US)

THORIUM OXIDES
Catalytic Effects
Thorium oxide: new catalyst for methanol, isobutanol, and light hydrocarbon production from carbon monoxide and hydrogen, 12:22358 (J;NL)

THORIUM-HOCHTEMPERATUR PROTOTYPE REACTOR
See THTR-300 REACTOR

THREE-BODY PROBLEM
Computer Codes
Configuration space Faddeev calculations: Progress report for period 1 January 1985-31 December 1985, 12:23988 (R;US)
Numerical Solution
Configuration space Faddeev calculations: Progress report for period 1 January 1985-31 December 1985, 12:23988 (R;US)

THTR-300 REACTOR
Hammuentrop, North Rhein Westfalia, Federal Republic of Germany
Management
Hochtemperatur-Kernkraftwerk GmbH (HKG). Annual report 1985, 12:22464 (R;DE;In German)
Reactor Licensing
Hochtemperatur-Kernkraftwerk GmbH (HKG). Annual report 1985, 12:22464 (R;DE;In German)

THYMUS
Dose-Response Relationships
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)
Low Dose Irradiation
Response of lymphoid organs to low dose rate Cf-252, Cs-137 and acute Co-60, 12:23675 (J;US)

TIGHT SANDS
See SANDSTONES

TIHANGE REACTOR
Tihange, Liege, Belgium
Containment Systems
New Belgian position on containment leakage testing, 12:22568 (RA;US)
Reactor Safety
New Belgian position on containment leakage testing, 12:22568 (RA;US)

TIHANGE-1 REACTOR
See TIHANGE REACTOR

TIME-OF-DAY PRICING
See TIME-OF-USE PRICING

TIME-OF-FLIGHT SPECTROMETERS
Fission neutron time-of-flight spectrometer, 12:23354 (RA;CS;In Slovak)

TIME-OF-SEASON PRICING
See TIME-OF-USE PRICING

TIME-OF-USE PRICING
Computer Codes
Residential response to time-of-use rates: Volume 4, Assessing RETOU's out-of-sample performance: Final report (Test of computer codes on utilities not involved in it's development), 12:22439 (R;US)

TIMING CIRCUITS
Design
Programmable master-timer system, 12:23280 (R;US)

TIN
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
X-Ray Fluorescence Analysis
Determination of tin in geological samples by low resolution radioisotope X-ray fluorescence, 12:23072 (R;PL;In Polish)

TIN 118 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)

TIN 120 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)

TIN 122 TARGET
Neutron Reactions
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)
Optical Models
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)

TIN 124 TARGET
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)
Neutron Reactions
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)
Optical Models
Nuclear structure studies via neutron interactions: Progress report, July 1, 1986-June 30, 1987, 12:23963 (R;US)

TIN ALLOYS
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)

TIN CHLORIDES
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
Elutriation
Tributyltin chloride in water: Solid phase extraction, capillary GC [gas chromatography] separation and EC [electron capture] detection, 12:22984 (R;US)
Solvent Extraction
Tributyltin chloride in water: Solid phase extraction, capillary GC [gas chromatography] separation and EC [electron capture] detection, 12:22984 (R;US)

TIN COMPLEXES
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)

TIRES
Ashes
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)
Chemical Composition
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)
Fluidized-Bed Combustion
Fluidized-bed combustion of scrap tires: Technical note, 12:22796 (R;US)

TISSUE EQUIVALENT CHAMBERS
See BRAGG GRAY CHAMBERS

TISSUE-EQUIVALENT DETECTORS
Performance
Neutron occupational exposure and radiological protection, 12:24071 (RA;FR)

TISSUE-EQUIVALENT MATERIALS
Chemical Composition
Future of A-150 TE plastic, 12:23317 (RA;FR)
Kerma
Determination of kerma in A-150 plastic for various neutron fields using three different methods, 12:24074 (RA;FR)

TISSUES
See also ANIMAL TISSUES
X-Ray Fluorescence Analysis
Determination of gold accumulation in human tissues caused by gold therapy using x-ray fluorescence analysis, 12:22981 (R;HU)

TITANIUM
Activation Analysis
Determination of concentration of some plant elements in reactions with charged particles, 12:23069 (RA;SU;In Russian)
Auger Electron Spectroscopy
Auger lineshape analysis, 12:24138 (J;NL)
TITANIUM 48 TARGET
Sodium 23 Reactions
Fusion with polarized heavy ions. Particle evaporation and fission at energies at and below the barrier, 12:23959 (R;DE;In German)
TITANIUM ALLOYS
See also NIMONIC PE16
TITANIUM BASE ALLOYS
The structure of amorphous Be-Ti-Zr alloys, 12:22874 (R;US)
Magnetoresistance
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)
Oxidation
Oxidation of uranium-0.75wt% titanium in environments containing oxygen and/or water vapor at 140/sup 0/C, 12:23116 (J;NL)
Spin
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)
TITANIUM BASE ALLOYS
Crevice Corrosion
Hydrogen absorption and crevice corrosion behavior of Ti Grade 12 during exposure to irradiated brine at 150°C, 12:22860 (R;US)
Mechanical Properties
Evaluation of the microstructure and mechanical properties of a Ti-6Al-4V shell, 12:22854 (R;US)
Microstructure
Evaluation of the microstructure and mechanical properties of a Ti-6Al-4V shell, 12:22854 (R;US)
Sorptive Properties
Hydrogen absorption and crevice corrosion behavior of Ti Grade 12 during exposure to irradiated brine at 150°C, 12:22860 (R;US)
TITANIUM BORIDES
Wear
Evaluation of wear rates and mechanisms of titanium diboride-graphite composite materials proposed for use as cathodes in Hall-Heroult cells, 12:22956 (R;US)
TITANIUM CARBIDES
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
Microanalysis
Scanning Auger microanalysis (SAM) studies of carbide coatings of titanium, zirconium and hafnium, 12:22923 (R;US)
TITANIUM CHLORIDES
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
TITANIUM HYDRIDES
Muons
Sites and diffusion for muons and hydrogen in titanium hydrides, 12:22922 (R;US)
TITANIUM OXIDES
Deposition
Optical and thermal effects in laser chemical vapor deposition, 12:23132 (J;US)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD (DOSIMETRY)
See THERMOLUMINESCENT DOSIMETRY
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TLP DEVICES
Stability
MHD stability properties of Extrap, 12:24259 (R;SE)
TMPN
See HYDROXY COMPOUNDS
TMX DEVICES
Thermal Barriers
Recent experimental progress in the TMX-U thermal barrier tandem mirror experiment, 12:24212 (RA;FR)
TNS REACTORS
The next logical tokamak confinement device beyond TFTR.
Design
Conceptual design of negative-ion based 500 keV 20 MW neutral beam injector, 12:24291 (R;JP;In Japanese)
Neutral Atom Beam Injection
Conceptual design of negative-ion based 500 keV 20 MW neutral beam injector, 12:24291 (R;JP;In Japanese)
TOA
Solubility
Purification of wet process phosphoric acid by solvent extraction with long-chain aliphatic amines , 12:22237 (R;SE)
TOKAMAK CHAUFAGE ALFVEN
See TCA TOKAMAK
TOKAMAK DEVICES

COMPACT IGNITION TOKAMAK
PBX DEVICES
PETULA TOKAMAK
SPHEROMAK DEVICES
T-10 TOKAMAK
TCA TOKAMAK
TEXTOR TOKAMAK
TORE SUPRA TOKAMAK
Alfven Waves
Alfven wave heating on TCA, 12:24253 (RA;CH)
Alfven wave heating results in TCA using coated bar antennae, 12:24298 (RA;CH)
Discontinuous heating behaviour observed in the TCA tokamak and its interpretation in terms of the Alfven wave spectrum, 12:24297 (RA;CH)
Non-linear antenna loading measurements in TCA, 12:24299 (RA;CH)
Banana Regime
Beating a dead horse with a red herring, 12:24254 (R;US)
Capacitors
Design and construction of electronic components for a "Novillo" Tokamak, 12:24288 (R;MX;In Spanish)
Charged-Particle Transport
Evaluation of the slowing down tail enhanced, neoclassical alpha particle energy flux, 12:24255 (R;US)
Energy Losses
Evaluation of the slowing down tail enhanced, neoclassical alpha particle energy flux, 12:24255 (R;US)
Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas, 12:24269 (J;US)
High-Frequency Heating
Alfven wave heating on TCA, 12:24253 (RA;CH)
Alfven wave heating results in TCA using coated bar antennae, 12:24298 (RA;CH)
Discontinuous heating behaviour observed in the TCA tokamak and its interpretation in terms of the Alfven wave spectrum, 12:24297 (RA;CH)
Non-linear antenna loading measurements in TCA, 12:24299 (RA;CH)
Meetings
TCA papers presented at 4th international symposium on heating in toroidal plasmas, 12:24252 (R;CH)
Plasma Confinement
Destabilization of Alfven-resonant modes by resistivity and diamagnetic drifts, 12:24267 (J;US)
Model for thermal transport in tokamaks, 12:24275 (J;US)
Resistive fluid turbulence in diverted tokamaks and the edge transport barrier in H-mode plasmas, 12:24269 (J;US)
Plasma Diagnostics
Reconstruction of plasma radiation features from projections measured with two bolometer arrays, 12:24265 (J;US)
Plasma Scrape-Off Layer
Alfven wave heating on TCA, 12:24253 (RA;CH)
Thermal Conductivity
Beating a dead horse with a red herring, 12:24254 (R;US)
TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK

TOLUENE
Self-Diffusion
Self-diffusion in compressed supercritical toluene-d_8, 12:23123 (J;US)
Vapor Pressure
Thermodynamics of coal liquid/solid systems: Quarterly progress report for the period of September 15, 1986 to December 15, 1986, 12:22149 (R;US)
TOPOLOGICAL MAPPING
Mathematical Manifolds
Construction of one unstable manifold for the dissipative Henon mapping, 12:24189 (J;GB)
TOPONIUM
Configuration Mixing
Toponium-Z^0 interference and phenomenology of an extra Z^0 in e^+e^- collisions, 12:23890 (R;US)
TORE SUPRA
See TORE SUPRA TOKAMAK

UPTAKE
Tracer Techniques
Cumulation of elements on algal cell walls, 12:23020 (RA;CS)
URACILS
Reduction
Borane reduction of uracil derivatives, 12:23137 (J;US)
URANINITES
Weathering
Studies on radionuclide distribution using alpha fission track analysis, 12:23487 (RA;AU)
URANIUM
See also URANIUM-ALPHA
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Calibration Standards
1984 EC enquiry into the needs for nuclear reference materials (Z>89), 12:22998 (RA;XA)
Advances in chemical standards for nuclear fuel analysis and safeguards purposes. Report of a consultants' meeting on nuclear reference materials, needs and availability held in Antwerp, Belgium, 8-11 October 1985, 12:22997 (R;XA)
Emission Spectroscopy
Analysis of solid samples in ICP-ES by direct insertion of a carbon cup into the tail of the source, 12:22995 (RA;IL)
Fluorescence Spectroscopy
Advances in the use of fluorimetry in inorganic analysis, 12:23013 (RA;CS;In Czech)
Verification of the visual control efficacity on quenching effect produced by Cr, Mn, Co and Fe in the uranium fluorimetric determination, by quantifying these metals with energy dispersive X-ray fluorescence, 12:23001 (R;GT;In Spanish)
Gamma Spectroscopy
Direct uranium determination in boreholes by semiconductor gamma spectrometry using 1001.4 keV line - laboratory testing of method with respect to specific conditions of deposit exploited with hydrochemical techniques, 12:23010 (RA;CS;In Czech)
Impurities
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Ion Exchange
Recuperation of uranium and gold in mineral pulps by adsorption, 12:23000 (R;BR;In Portuguese)
Ion-Atom Collisions
Study of the positron production in uranium-uranium collisions, 12:23808 (R;DE;In German)
Lamb Shift
The Lamb shift in heliumlike uranium (U^{90+}), 12:23812 (R;US)
Laser Isotope Separation
Science, technology, and the industrialization of laser driven processes, 12:22239 (BA;US)
Magnetic Filters
Effect of particle size and colloid stability on the wet high-intensity magnetic separation of uranium from cyanidation residues, 12:22238 (R;ZA)
Photoacoustic Spectroscopy
Laser photoacoustic spectroscopy for trace level detection of actinides in groundwater, 12:22985 (R;US)
Quantitative Chemical Analysis
Mining Pribram in science and technology. Modern methods of analytical process testing, 12:23011 (R;CS;In Czech)

Radioecological Concentration
Investigation of thorium contamination at two target areas at White Sands Missile Range, 12:23489 (R;US)
Separation Processes
Continuous preconcentration of cobalt and uranium using liquid emulsion membranes, 12:23028 (RA;CS)
Effect of particle size and colloid stability on the wet high-intensity magnetic separation of uranium from cyanidation residues, 12:22238 (R;ZA)
Membrane extraction for preconcentration of radionuclides, 12:23026 (RA;CS)
Solvent Extraction
Purification of wet process phosphoric acid by solvent extraction with long-chain aliphatic amines , 12:22237 (R;SE)
Solvent extraction of some metals from aqueous solutions, 12:23032 (RA;CS)
Spectrophotometry
Automation of analytical work at a chemical extraction mine, 12:23017 (RA;CS;In Czech)
Development of automatic analyzers by the Czechoslovak Uranium Industry, 12:23016 (RA;CS;In Czech)
Extraction spectrophotometric analyzer, 12:23018 (RA;CS;In Czech)
Titration
Determination of uranium and plutonium, 12:23008 (RA;CS;In Czech)
X-Ray Fluorescence Analysis
X-ray fluorescence analysis of U in solution using a double correction for background-scattered radiation, 12:23012 (RA;CS;In Czech)

URANIUM 233
Decay
Neon nucleus emission in /sup 233/U decay, 12:23985 (RA;SU;In Russian)
Thermal Fission
Institute for Nuclear Chemistry, University of Mainz. Annual report 1985, 12:23984 (R;DE;In German)

URANIUM 235
Calibration Standards
Interlaboratory comparison program for nondestructive assay of prototype uranium reference materials, 12:23074 (R;US)
Fast Fission
Few-group analysis of current delayed-neutron data, 12:22487 (J;US)

URANIUM 238
Photofission
Photofission of /sup 238/U with neutron-capture gamma rays, 12:23983 (RA;IL)

URANIUM 238 TARGET
Carbon 12 Reactions
Pion and photon bremsstrahlung in a heavy ion reaction model with friction, 12:23989 (R;DE)

URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Crystal Structure
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
De Haas-Van Alphen Effect
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Electronic Specific Heat
Pressure dependence of the specific heat of heavy-fermion compounds ($CeAl_3$; $CeCu_6$; UBe_{13}; UPt_3), 12:22855 (R;US)
Fermi Level
Fermi surfaces of mixed valent and heavy fermion metals ($CeSn_3$, CeSb, $CeCu_6$, UPt_3, UPd_3, $NpSn_3$), 12:22825 (R;US)
Light Scattering
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Magnetoresistance
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)
Phonons
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Raman Spectra
Polarized light scattering investigation of UBe/sub 13/, 12:22879 (J;US)
Spin
Magnetoresistivity of the spin-fluctuation materials $TiBe_2$ and UAl_2, 12:22886 (J;US)

URANIUM ARSENIDES
Crystal-Phase Transformations
Magnetic phase diagram of the UAssub(1-x)Sesub(x) system in zero magnetic field studied by neutron diffraction from single crystals, 12:23099 (RA;IL)
Neutron diffraction investigation of commensurate and incommensurate phases in UAssub(1-x)Sesub(x) single crystals, 12:23096 (RA;IL)
Neutron diffraction study of UAssub(0.95)Sesub(0.05) single crystal. Disappearance of the type-I antiferromagnetic structure, 12:23097 (RA;IL)
Neutron Diffraction
Magnetic phase diagram of the UAssub(1-x)Sesub(x) system in zero magnetic field studied by neutron diffraction from single crystals, 12:23099 (RA;IL)
Neutron diffraction investigation of commensurate and incommensurate phases in UAssub(1-x)Sesub(x) single crystals, 12:23096 (RA;IL)
Neutron diffraction study of UAssub(0.95)Sesub(0.05) single crystal. Disappearance of the type-I antiferromagnetic structure, 12:23097 (RA;IL)

URANIUM BASE ALLOYS
Oxidation
Oxidation of uranium-0.75wt% titanium in environments containing oxygen and/or water vapor at 140/sup 0/C, 12:23116 (J;NL)

URANIUM CHLORIDES
Crystal Structure
Spin-density study of UCl_4 - discovery of covalency effects, 12:22933 (J;CH)

URANIUM DEPOSITS

URANIUM ORES
Geochemical Surveys
Report on the results from the 3rd phase geochemical stream sediment and water sampling in the Vathyrema area (Drama Dept.) (E. Macedonia, Greece), 12:22228 (R;GR;In Greek)
Uranium exploration in Central and Eastern Macedonia and Thrace (Greece). Geology, scintillometry and geochemistry of the map area 2623(I,IV)-2624-2723-2724 Thrace, 12:22229 (R;GR;In Greek)
Ore Processing
Recuperation of uranium and gold in mineral pulps by adsorption, 12:23000 (R;BR;In Portuguese)
Radiometric Surveys
Report on the results from the 3rd phase geochemical stream sediment and water sampling in the Vathyrema area (Drama Dept.) (E. Macedonia, Greece), 12:22228 (R;GR;In Greek)
URANIUM PHOSPHIDES
Magnetization
Neutron diffraction and magnetization studies of UPsub(0.80)Ssub(0.20) single crystals. Observation of several incommensurate and field-induced ferrimagnetic phases, 12:23100 (RA;IL)
Neutron Diffraction
Neutron diffraction and magnetization studies of UPsub(0.80)Ssub(0.20) single crystals. Observation of several incommensurate and field-induced ferrimagnetic phases, 12:23100 (RA;IL)
URANIUM SELENIDES
Crystal-Phase Transformations
Magnetic phase diagram of the UAssub(1-x)Sesub(x) system in zero magnetic field studied by neutron diffraction from single crystals, 12:23099 (RA;IL)
Neutron diffraction investigation of commensurate and incommensurate phases in UAssub(1-x)Sesub(x) single crystals, 12:23096 (RA;IL)
Neutron diffraction study of UAssub(0.95)Sesub(0.05) single crystal. Disappearance of the type-I antiferromagnetic structure, 12:23097 (RA;IL)
Neutron Diffraction
Magnetic phase diagram of the UAssub(1-x)Sesub(x) system in zero magnetic field studied by neutron diffraction from single crystals, 12:23099 (RA;IL)
Neutron diffraction investigation of commensurate and incommensurate phases in UAssub(1-x)Sesub(x) single crystals, 12:23096 (RA;IL)
Neutron diffraction study of UAssub(0.95)Sesub(0.05) single crystal. Disappearance of the type-I antiferromagnetic structure, 12:23097 (RA;IL)
URANIUM SILICIDES
Radiation Effects
The effect of fabrication variables on the irradiation performance of uranium silicide dispersion fuel plates, 12:22924 (R;US)
Swelling
The effect of fabrication variables on the irradiation performance of uranium silicide dispersion fuel plates, 12:22924 (R;US)
URANIUM SULFIDES
Magnetization
Neutron diffraction and magnetization studies of UPsub(0.80)Ssub(0.20) single crystals. Observation of several incommensurate and field-induced ferrimagnetic phases, 12:23100 (RA;IL)
Neutron Diffraction
Neutron diffraction and magnetization studies of UPsub(0.80)Ssub(0.20) single crystals. Observation of several incommensurate and field-induced ferrimagnetic phases, 12:23100 (RA;IL)
URANIUM-ALPHA
Crystal Structure
Determination of the incommensurately modulated structure of alpha-uranium below 37K. Technical report, 12:22819 (R;US)
URANYL COMPLEXES
Bond Lengths
Chemistry of complex uranium compounds, 12:23101 (RA;CS;In Czech)
Diffusion
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Solvent Extraction
Chemistry of complex uranium compounds, 12:23101 (RA;CS;In Czech)
URANYL NITRATES
Aqueous Solutions
Criticality of uranyl-nitrate solution in slab geometry, 12:22332 (J;US)
Highly Enriched Uranium

WASTE DISPOSAL
WASTE TRANSPORTATION
Program Management
Waste minimization study for the Lawrence Livermore National Laboratory: Final report, 12:23495 (R;US)
WASTE PRODUCT UTILIZATION
Summary of research activities and progress in utilization of municipal solid waste, 12:22793 (R;US)
Testing materials for support-wall construction. Report of Investigations/1986, 12:22165 (R;US)
Economics
Utilization potential of coal combustion by-products: Somerset Power Plant case study: Final report, 12:22158 (R;US)
Feasibility Studies
Potential uses for the slag from the Cool Water demonstration plant: Final report, 12:22138 (R;US)
WASTE SOLUTIONS
See LIQUID WASTES
WASTE TRANSPORTATION
Information Dissemination
[National Congress of American Indians]: Final 1985-1986 progress report, March 1, 1986-October 7, 1986, 12:22263 (R;US)

Legal Aspects
Assessment of state and local notification requirements for transportation of radioactive and other hazardous materials. Final report, 12:22306 (R;US)
Research Programs
[Analysis of transportation issues: Eighth bi-monthly report, November-December 1986], 12:22246 (R;US)
Socio-Economic Factors
Economic factors in the provision of transportation services, 12:22782 (R;US)
T Codes
TRANSNET: a user-accessible network of transportation analysis models, 12:22250 (R;US)

WASTE WATER
Bioassay
Chemical and bioassay characterizations of sludge and wastewater from fixed bed UNDERC coal gasification: Final report, 12:22154 (R;US)
Chemical Composition
Characterization of KILnGAS wastewater: Final report, 12:22137 (R;US)
Health Hazards
Chemical and bioassay characterizations of sludge and wastewater from fixed bed UNDERC coal gasification: Final report, 12:22154 (R;US)
Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale, 12:22224 (R;US)

WASTEFORMS

Loss of Coolant
Considerations for realistic emergency core cooling system evaluation methodology for light water reactors, 12:22605 (J;US)
Pressure Vessels
Accounting for changing source distributions in light water reactor surveillance dosimetry analysis, 12:22448 (J;US)
Reactor Safety
Guidebook to light water reactor systems safety analysis, 12:22613 (B;US)

WATER INFLUX
Risk Assessment
Additional geotechnical studies: Strategic Petroleum Reserve (SPR), Weeks Island, Louisiana (Weeks Island, LA), 12:22201 (R;US)

WATER MODERATOR
See WATER

WATER POLLUTION
Southeast Chicago study: an assessment of environmental pollution and public-health impacts. Final report, 12:22666 (R;US)
Mathematical Models
Case studies and model testing of the Metals Exposure Analysis Modeling System (MEXAMS). Report for January-September 1985, 12:23522 (R;US)
Public Information
An examination of models of issue development: Environmental scanning using on-line databases: Final report (Acid rain, PCBs, thermal pollution, ground water pollution), 12:22694 (R;US)

WATER POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Standards
Economic impact of proposed water quality and effluent standard amendments for water in the Sangamon River basin, 12:23534 (R;US)

WATER QUALITY
National data base of nonurban-nonpoint-source discharges and their effect on the nation's water quality. Final report, 12:23521 (R;US)

WATER SOURCE HEAT PUMPS
Performance
Groundwater heat pump performance improvement with pre-coolers and pump modification: Final report for the 1985-86 SOMED [School of Mines and Energy Development] project year, 12:22767 (R;US)

WATER VAPOR
Ionization
Calculated approach to the ionization of low-Z molecules by heavy charged particles, 12:24054 (RA;FR)

WATERBORNE PARTICLES
See PARTICULATES

WAVEGUIDES
Breakdown
Computational and experimental short-pulse, high-power microwave breakdown in a low-pressure, air-filled rectangular waveguide, 12:23205 (R;US)
Computerized Simulation
Computational and experimental short-pulse, high-power microwave breakdown in a low-pressure, air-filled rectangular waveguide, 12:23205 (R;US)

WAZ 16

WEAK HADRONIC DECAY
Selection Rules
$\Delta I = 1/2$ rule for K->phiphi decays, 12:23889 (R;NO)

WEATHERING
Tendency to disintegrate or slack on exposure to weather.
Quantitative Chemical Analysis
Acid rain and weathering damage to carbonate building stone: Results of material loss measurements, 12:23473 (R;US)

WEATHERIZATION
Marketing
Low-income community weatherization, 12:22744 (RA;US)
WEINBERG-SALAM GAUGE MODEL
SU-2 Groups
On muon decay in left-right-symmetric electroweak models, 12:23901 (J;US)
U-1 Groups
On muon decay in left-right-symmetric electroweak models, 12:23901 (J;US)
WELDED JOINTS
Crack Propagation
Case study of the propagation of a small flaw under PWR loading conditions and comparison with the ASME Code design life comparison of ASME Code Sections III and XI, 12:22461 (BA;US)
Data Analysis
Statistical handling of PISC-II round robin NDE data, 12:22899 (BA;US)
Fatigue
Case study of the propagation of a small flaw under PWR loading conditions and comparison with the ASME Code design life comparison of ASME Code Sections III and XI, 12:22461 (BA;US)
Fracture Properties
An analysis of heat-affected zone cracking in Ni/sub 3/Al alloys, 12:22894 (BA;US)
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
Metallography
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
Residual Stresses
Three-dimensional residual stress characterization of thick plate weldments with advanced measurement instrumentation and methodologies: Final technical report for period January 1984 to April 1986, 12:22859 (R;US)
Thermal Conductivity
Hot cracking of hastelloy C-type alloys, 12:22895 (BA;US)
Ultrasonic Testing
Statistical handling of PISC-II round robin NDE data, 12:22899 (BA;US)
WELDING MACHINES
Computerized Control Systems
Electron beam welding unit data acquisition using personal computer, 12:22896 (BA;US)
Data Acquisition Systems
Electron beam welding unit data acquisition using personal computer, 12:22896 (BA;US)
WELDS
See WELDED JOINTS
WELL DRILLING
Data Acquisition
Analyses of operational times and technical aspects of the Salton Sea scientific drilling project: [Final report], 12:22391 (R;US)
WENDELSTEIN-7 STELLARATOR
ECR Heating
Electron cyclotron resonance heating on the W VII A-stellarator, 12:24208 (RA;FR)
WEST GERMANY

COMECON
Radiation safety of commercial NPP with WWER-440, 12:22530 (RA;XM;In Russian)
Computerized Simulation
Prognoses of gamma-radiation fields on the power plants with WWER-440 and WWER-1000 reactors and comparison of the expected dose rates with measured values, 12:22455 (RA;XM;In Russian)
Dose Commitments
Personnel dose commitment during repair works, 12:22537 (RA;XM;In Russian)
Radioactive aerosols intake through inhalation during repair works on NPP with WWER-440, 12:22538 (RA;XM;In Russian)
Environmental Impacts
Radiation impact of accident at a unificated NPP with WWER-440, 12:22550 (RA;XM;In Russian)
Statistic regularities of radioactive noble gases standardized releases from NPPs, 12:22510 (RA;XM;In Russian)
Failure Mode Analysis
BETL-B code for calculation of the fuel element cladding temperature during accidents, 12:22551 (RA;XM;In Russian)
Radiation Protection
Evaluation of radiation impact on NPP personnel in GDR, 12:22506 (RA;XM;In Russian)
On the role of ventilation and air clean-up in the radiation safety ensurance for NPPs with WWER-1000, 12:22542 (RA;XM;In Russian)
Plant lay-out impact on personnel radiation safety at NPP with WWER, 12:22540 (RA;XM;In Russian)

Radiation and working conditions at NPP with WWER-440 and PWR, 12:22503 (RA;XM;In Russian)
Radioactive Effluents
Statistic regularities of radioactive noble gases standardized releases from NPPs, 12:22510 (RA;XM;In Russian)
Reactor Accidents
BETL-B code for calculation of the fuel element cladding temperature during accidents, 12:22551 (RA;XM;In Russian)
Classification of accidents on NPP with WWER, 12:22547 (RA;XM;In Russian)
Radiation impact of accident at a unificated NPP with WWER-440, 12:22550 (RA;XM;In Russian)
Reactor Maintenance
Personnel dose commitment during repair works, 12:22537 (RA;XM;In Russian)
Radioactive aerosols intake through inhalation during repair works on NPP with WWER-440, 12:22538 (RA;XM;In Russian)
Reactor Safety
Radiation safety of commercial NPP with WWER-440, 12:22530 (RA;XM;In Russian)
Shielding
Prognoses of gamma-radiation fields on the power plants with WWER-440 and WWER-1000 reactors and comparison of the expected dose rates with measured values, 12:22455 (RA;XM;In Russian)
Standardization
Classification of accidents on NPP with WWER, 12:22547 (RA;XM;In Russian)
Ventilation
On the role of ventilation and air clean-up in the radiation safety ensurance for NPPs with WWER-1000, 12:22542 (RA;XM;In Russian)
Working Conditions
Plant lay-out impact on personnel radiation safety at NPP with WWER, 12:22540 (RA;XM;In Russian)
Radiation and working conditions at NPP with WWER-440 and PWR, 12:22503 (RA;XM;In Russian)
WWER-1000 REACTOR
See WWER-5 REACTOR
WWER-5 REACTOR
Radioactive Wastes
Radiation conditions during Novo Voronezh NPP start-up and commissioning, 12:22507 (RA;XM;In Russian)
Working Conditions
Radiation conditions during Novo Voronezh NPP start-up and commissioning, 12:22507 (RA;XM;In Russian)
WWER-500 REACTOR

X

X CHROMOSOME
Prior to April 1980 this concept was indexed to HETEROCHROMOSOMES.
Genetic Mapping
Studies on T(X;7)18Rl, an X-7 translocation in which non-inactivation of one translocation product is demonstrable, 12:23704 (RA;US)
Genetic Radiation Effects
Cytological studies of sterility in male progeny of mutagen-exposed male parents, 12:23663 (RA;US)
Inactivation
Investigation of the process of X inactivation through analysis of OTC activity in X-autosome translocations, 12:23550 (RA;US)
Strand Breaks
Cytological studies of sterility in male progeny of mutagen-exposed male parents, 12:23663 (RA;US)
Relation of non-homologous synapsis found in synaptonemal complexes of T(X;4)1Rl mice to location of the translocation breakpoints, 12:23566 (RA;US)
RNA synthesis in spermatocytes of sterile X-autosome translocation males, 12:23568 (RA;US)
Synaptic behavior of a new translocation T(X;7)18Rl and the hypothesis of G-synapsis, 12:23565 (RA;US)
Transcription
RNA synthesis in spermatocytes of sterile X-autosome translocation males, 12:23568 (RA;US)
X RADIATION
Fluoroscopy
Fluoroscopic inspection in the non-destructive testing of material today- and tomorrow, 12:23231 (R;BR)
Inspection
Fluoroscopic inspection in the non-destructive testing of material today- and tomorrow, 12:23231 (R;BR)
X-CHROMOSOMES
See X CHROMOSOME
XENOBIOTICS
Carcinogenesis
Mammalian cytogenetics, 12:23561 (RA;US)
Molecular mechanisms of mutagenesis and DNA repair, 12:23692 (RA;US)
Genetic Effects
Cytological studies of sterility in male progeny of mutagen-exposed male parents, 12:23663 (RA;US)
Repair of human DNA, 12:23653 (RA;US)
Mutagenesis
Molecular mechanisms of mutagenesis and DNA repair, 12:23692 (RA;US)
XENON
Photoionization
Multiphoton ionization in intense ultraviolet laser fields, 12:23792 (R;US)
XENON 133
Air Filters
Decontamination factor determination for adsorption filters in nuclear power plants, 12:23198 (RA;CS;In Slovak)
Radiation Monitoring
Discontinuous method of /sup 3/H, /sup 14/C, /sup 85/Kr and /sup 133/Xe activity measurement in nuclear power plant stack, 12:23360 (RA;CS;In Slovak)
X-RASERS
See X-RAY LASERS
X-RAY FLUORESCENCE ANALYSIS
Comparative Evaluations
Comparison of methods of analysis for natural environmental radionuclides, especially Th and U, at the level of a few μg.g/sup -1/, 12:23044 (RA;AU)
X-RAY FLUORESCENCE ANALYZERS
Mirrors
Fabrication of an 8:1 ellipsoidal mirror for a synchrotron x-ray microprobe, 12:22983 (R;US)
Performance
CCD-based synchrotron X-ray detector for protein crystallography - Performance projected from an experiment, 12:23086 (J;US)
X-RAY LASERS
Pumping
Time and space resolved spectroscopy of x-ray laser experiments from 81A to 220 A, 12:23218 (R;US)
Ultraviolet Radiation
XUV lasers. A review, 12:23215 (RA;FR)
X-RAY SPECTROSCOPY
Implications of heavy-ion-induced satellite x-ray emission I, 12:24128 (J;NL)

Y

YEASTS
See also CANDIDA
Biological Radiation Effects
"Thin-Down" in radiobiology, 12:23684 (BA;US)
Growth
Linear increase in cell volume during the growth cycle of Schizosaccharomyces pombe, 12:22360 (J;US)

YIELD (BIOLOGICAL)
See PRODUCTIVITY
YTTERBIUM
Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Hadronic Atoms
Measurement of the antiproton magnetic moment and a determination of the LS-term for the antiproton-nucleus-interaction, 12:23836 (R;DE;In German)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
YTTERBIUM 169
Multipole Transitions
Investigation of /sup 169/Yb->/sup 169/Tm decay by means of an anti-Compton spectrometer, 12:23974 (RA;CS;In Czech)
YTTERBIUM 171
Excited States
Lifetimes of sup(171)Yb excited states, 12:23978 (R;SU;In Russian)
YTTERBIUM 171 TARGET
Helium 3 Reactions
Decay from the two-quasiparticle regime in even-even deformed rare earth nuclei, 12:23979 (R;NO)
YTTERBIUM IONS
Fluorescence
Energy transfer among Yb/sup 3+/ ions in a silicate glass, 12:22965 (J;US)
YTTRIUM
Solvent Extraction
Purification of wet process phosphoric acid by solvent extraction with long-chain aliphatic amines , 12:22237 (R;SE)
YTTRIUM 88
Electron Capture Decay
Measurement of EC/β/sup +/ ratio in light nuclei decay, 12:23955 (RA;CS;In Slovak)
YTTRIUM ADDITIONS
Chemical Reaction Kinetics
Oxidation behavior of chromium and a chromium-yttrium binary alloy, 12:22904 (BA;US)
Corrosion Products
Oxidation behavior of chromium and a chromium-yttrium binary alloy, 12:22904 (BA;US)
Oxidation
Oxidation behavior of chromium and a chromium-yttrium binary alloy, 12:22904 (BA;US)
YTTRIUM ALLOYS
See also YTTRIUM ADDITIONS
Neutron Diffraction
Magnetic structures of HoFe/sub 5/Al/sub 7/. A neutron diffraction study, 12:22836 (RA;IL)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS
YTTRIUM COMPOUNDS
YTTRIUM COMPOUNDS
Multi-Photon Processes
Two-photon-absorption cross section of Nd/sup 3+/ in yttrium aluminum garnet and yttrium lithium fluoride near 1.06 μm, 12:22963 (J;US)
YUCCA MOUNTAIN
Tuff
An evaluation of the use of mercury porosimetry in calculating hydrologic properties of tuffs from Yucca Mountain, Nevada, 12:22311 (R;US)

Z

Z NEUTRAL BOSONS
Prior to October 1985 this concept was indexed to INTERMEDIATE VECTOR BOSONS.
Configuration Mixing
Toponium-Z^0 interference and phenomenology of an extra Z^0 in e^+e^- collisions, 12:23890 (R;US)
Coupling
Ma responds, 12:23903 (J;US)
Leptonic Decay
Anomalous Z decays and g - 2 of the electron, 12:23847 (J;NL)
Pair Production
ZZ production at supercollider energies, 12:23852 (R;US)
Particle Decay
Single W production from heavy Z decay in E_6 theories, 12:23853 (R;US)
Particle Production
Small multiplicity events in $e^+ + e^- \rightarrow Z^0$ and unconventional phenomena, 12:23891 (R;US)
Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZINC
Activation Analysis
Current studies of biological materials using instrumental and radiochemical neutron activation analysis, 12:23036 (RA;AU)
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Determination of concentration of some plant elements in reactions with charged particles, 12:23069 (RA;SU;In Russian)
Diffusion
Diffusion and interaction with vacancies of non-transition-metal solutes in some FCC metals, 12:22921 (J;GB)
Electrodeposition
The development of a micropatterned electrode for studies of zinc electrodeposition, 12:22644 (R;US)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
X-Ray Spectroscopy
Incorporation of trace metals and radionuclides into goethite, 12:23052 (RA;AU)
ZINC COMPLEXES
Radiolysis
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
Redox Reactions
Redox chemistry of metalloporphyrins in aqueous solution, 12:23139 (J;US)
ZINC FLUORIDES
Electronic Structure
Neutron scattering study of the effect of a random field on the three-dimensional dilute Ising antiferromagnet Fe/sub 0.6/Zn/sub 0.4/F_2, 12:22972 (J;US)
ZINC OXIDES
Electrical Properties
Fast pulse response of zinc-oxide varistors, 12:23245 (J;US)
ZINC TELLURIDES
Crystal Structure
Use of DCD for structural properties characterization of substrates and layers of II-VI compounds, 12:22944 (RA;IL)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION-1 REACTOR
Zion, Illinois, USA
Primary Coolant Circuits
Case study of the propagation of a small flaw under PWR loading conditions and comparison with the ASME Code design life comparison of ASME Code Sections III and XI, 12:22461 (BA;US)
ZIRCALOY 4
Fuel Cans
LWBR development program: Flow-induced vibrational wear behavior of zircaloy clad simulated fuel rods in a grid support system, 12:22473 (R;US)
ZIRCONIUM
See also ZIRCONIUM-ALPHA

Activation Analysis
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)
Distribution
Kinetic data determination by means of the analytical ultracentrifuge, for optimization of the PUREX process, 12:22242 (R;DE;In German)
Ion Exchange
Determination of metallic impurities in uranium through anion exchange separation and neutron activation analysis, 12:23078 (R;FI)

ZIRCONIUM 84
De-Excitation
Studies of nuclear high-spin levels in the mass range around Z ≅90 and Z ≅150, 12:23964 (R;DE;In German)
High Spin States
Studies of nuclear high-spin levels in the mass range around Z ≅90 and Z ≅150, 12:23964 (R;DE;In German)

ZIRCONIUM 87
De-Excitation
Studies of nuclear high-spin levels in the mass range around Z ≅90 and Z ≅150, 12:23964 (R;DE;In German)
High Spin States
Studies of nuclear high-spin levels in the mass range around Z ≅90 and Z ≅150, 12:23964 (R;DE;In German)

ZIRCONIUM 90 TARGET
Alpha Reactions
Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei, 12:24028 (R;SU;In Russian)
Charge-Exchange Reactions
Study of the (/sup 3/He,t) reaction and the (p,n) reaction at intermediate energies, 12:24035 (R;DE;In German)
Helium 3 Reactions
33 and 43 MeV (^{3}He, xnγ) exclusive reactions on targets from Zr to Pb, 12:23971 (J;NL)
Proton Reactions
Unified semimicroscopic description of the scattering of flow energy protons and α-particles on nuclei, 12:24028 (R;SU;In Russian)

ZIRCONIUM ALLOYS
See also ZIRCONIUM BASE ALLOYS
The structure of amorphous Be-Ti-Zr alloys, 12:22874 (R;US)
Interstitials
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)
Thermal Diffusion
Preliminary study of niobium alloy contamination by transport through helium (Nb-1Zr; Sm-Co; Hiperco 50 steel; alumina), 12:22829 (R;US)

ZIRCONIUM BASE ALLOYS
Hydrogen
Hydrogen depth profiling in Zr-2.5 wt% Nb alloy, 12:22834 (RA;IL)
Moessbauer Effect
Identification in zirconium alloys using Moessbauer spectroscopy, 12:22841 (RA;SU;In Russian)
Phase Studies
Identification in zirconium alloys using Moessbauer spectroscopy, 12:22841 (RA;SU;In Russian)
Physical Radiation Effects
Post-irradiation research of prospective zirconium alloys, 12:22838 (RA;CS;In Czech)
Thermal Diffusion
Thermotransport of hydrogen in Zr-2.5 wt% Nb alloy, 12:22833 (RA;IL)

ZIRCONIUM CARBIDES
Microanalysis
Scanning Auger microanalysis (SAM) studies of carbide coatings of titanium, zirconium and hafnium, 12:22923 (R;US)

ZIRCONIUM IONS
Oxidation
Atomic collisions and plasma physics. Final report, 1 July 1983-30 June 1986, 12:23789 (R;US)

ZIRCONIUM NITRATES
Solvent Extraction
Investigation on the influence of the concentration of Zr-ions in model extraction systems TBP - diluent - Sr/sup +4/- HNO/sub 3/. Pt.1, 12:23070 (R;PL;In Polish)
Investigation on the influence of the concentration of Zr-ions in model extraction systems TBP - diluent - Zr/sup +4/- HNO/sub 3/. Pt. 2, 12:23071 (R;PL;In Polish)

ZIRCONIUM OXIDES
Fracture Properties
Mechanisms of transformation toughening: Final report, 12:22826 (R;US)
Hardening
Mechanisms of transformation toughening: Final report, 12:22826 (R;US)
Phase Transformations
Mechanisms of transformation toughening: Final report, 12:22826 (R;US)

ZIRCONIUM-ALPHA
Deformation
Eighth conference of Czechoslovak physicists. Part I. Vol. 1, 12:23820 (R;CS;In Czech, Slovak)
Softening in alpha zirconium polycrystals during deformation, 12:22839 (RA;CS;In Czech)
Hardening
Strengthening of alpha zirconium polycrystals, 12:22840 (RA;CS;In Czech)

ZOOPLANKTON
Spatial Distribution
Biological processes in the water column of the South Atlantic Bight: Zooplankton responses: A progress report, June 1986 to June 1987, 12:23498 (R;US)

ZT-40 DEVICES
Plasma Simulation
Modeling and transport simulations of F - θ pumping in the RFP, 12:24195 (R;US)
Transport Theory
Modeling and transport simulations of F - θ pumping in the RFP, 12:24195 (R;US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	Abstract No.	Report No.
AA03-76SF00034	**Univ. of California, Los Angeles**	
	12:22390	Bulletin of the Seismological Society of America 71 NO. 6. 1849-1861 (Dec 1981).
AC01-81CS50058	**COMSIS Corp., Wheaton, MD (USA). Professional Services Div.**	
	12:22800	DOE/CS/50058—T2
AC01-86CE20126	**Energetics, Inc., Columbia, MD (USA)**	
	12:22703	DOE/CE/20126—T8
AC02-76CH00016	**Brookhaven National Lab., Upton, NY (USA)**	
	12:22084	BNL—39372
	12:22167	BNL—39371
	12:22192	BNL—39180
	12:22193	BNL—39350
	12:22255	BNL—39314
	12:22256	BNL-NUREG—39315
	12:22257	BNL-NUREG—39319
	12:22706	BNL—38790
	12:22885	Physical Review [Section] B: Condensed Matter 34 NO. 12. 8421-8429 (15 Dec 1986).
	College of William and Mary, Williamsburg, VA (USA)	
	12:22922	BNL—39422
	12:22972	Physical Review [Section] B: Condensed Matter 31 NO. 7. 4548-4556 (1 Apr 1985).
	Brookhaven National Lab., Upton, NY (USA)	
	12:22983	BNL—39293
	12:23378	Review of Scientific Instruments 58 NO. 1. 143-144 (Jan 1987).
	12:23423	BNL—39209
	12:23535	BNL—39310
	12:23589	(17 Apr 1986).
	12:23590	(11 Mar 1986).
	12:23648	NUREG/CR—4409-Vol.2
	12:23688	BNL—39351
	12:23791	BNL—39373
	12:23908	Comments on Nuclear and Particle Physics 13 NO. 6. 285-311 (1984).
	12:24124	Physical Review Letters 54 NO. 15. 1702-1705 (15 Apr 1985).
AC02-76CH03000	**Fermi National Accelerator Lab., Batavia, IL (USA)**	
	12:23857	FNAL/C—86/167
	12:23858	FNAL/Pub—87/19-E
AC02-76ER01198	**Univ. of Illinois, Urbana**	
	12:22918	Materials Research Society Symposia Proceedings 28 335-342 (1984).
	12:22971	Physical Review [Section] B: Condensed Matter 31 NO. 7. 4728-4731 (1 Apr 1985).
AC02-76ER02753	**Kansas State Univ., Manhattan**	
	12:23133	Inorganic Chemistry 23 NO. 17. 2613-2619 (1984).
AC02-76ER03069	**Massachusetts Institute of Technology, Cambridge**	
	12:23932	Physical Review [Section] D: Particles and Fields 30 NO. 12. 2647-2652 (15 Dec 1984).
	12:23933	Physical Review [Section] D: Particles and Fields 30 NO. 12. 2462-2473 (15 Dec 1984).
AC02-76ER04054	**Columbia Univ., Palisades, NY**	
	12:23727	Journal of Geophysical Research 89 NO. B6. 4319-4325 (10 Jun 1984).
AC02-76ET53052	**Oak Ridge National Lab., TN**	
	12:24132	Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Mat
AC02-76EV02185	**Lamont-Doherty Geological Observatory of Columbia Univ., Palisades, NY**	
	12:23525	Geochimica et Cosmochimica Acta 48 1561-1564 (1984).
AC02-76EV02386	**New York Univ., NY**	
	12:23712	Carcinogenesis 6 NO. 1. 121-126 (1985).
	12:23713	Biochemistry 23 NO. 23. 5433-5439 (1984).

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form DE82000001 or TI82000001 appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the document quality for microfiche (MF) and printed copy (PC) production: 1 = 92 to 95% legibility, available PC and MF; 2 = 88 to 91% legibility, available MF only; 3 = 87% or less legibility, available PC only. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS).

FILE NUMBER CORRELATION

This correlation list is provided for those organizations where document storage is alphanumeric by report number and request may be received by file number. For other information about a document (abstract number, distribution category, availability, and price), please refer to the Report Number Index.

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE87003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) and other price codes are for domestic users; prices for foreign purchasers are, in most instances, twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($6.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for PR-360-4.

MICROFICHE		EXCEPTIONAL		MAGNETIC TAPES		DISKETTES	
A01	$6.50	E01	$7.50	T01	$150.00	D01	$ 50
		E02	10.50	T02	175.00	D02	75

PRICES EFFECTIVE JANUARY 1, 1987

U. S. DEPARTMENT OF COMMERCE

National Technical Information Service

5285 Port Royal Road, Springfield, Virginia 22161

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 87-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
